Announcing the Red Hat Ansible Automation Platform

Red Hat Ansible Automation History

At Red Hat, we've worked over time to bring you the automation content, engine, and infrastructure you need for your enterprise.

Red Hat Ansible Automation History

Trusted and verified automation engine for automating across IT operations

An enterprise product for controlling and scaling automation

Out-of-the-box content for Networking and Security (beta)

Certified partner content

Teams are automating...

LINES OF BUSINESS

NETWORK

SECURITY

OPERATIONS

DEVELOPERS

INFRASTRUCTURE

When automation crosses teams, you need an Automation Platform

Introducing the Red Hat Ansible Automation Platform

Red Hat Ansible Automation Platform

Fueled by an open source community

What is coming with the Automation Platform?

COLLECTIONS

A new method of building and consuming Ansible content

AUTOMATION HUB

Private content repository for sharing Automation

SCALABLE EXECUTION

Extending Tower to support automation whenever and wherever you need it

AUTOMATION ANALYTICS

Analytical insights into the Automation runtime

DEVELOPER KIT

Creator based tooling to simplify content creation and distribution

CONTENT PACKAGES

Opinionated, focused content, targeting key automation use cases, from Red Hat and certified partners

Collections

Automation Hub

Scalable Execution

Automation Analytics

Developer Kit

Content Packages

Ansible - a story of growth

The success and growth of Ansible has been staggering. But as time has gone on, we are reaching the limit of a single content lifecycle and distribution point.

500+

Modules in Ansible 2.0

For Linux management, cloud provisioning, application deployment, Windows management and more.

3000+

Modules in Ansible 2.8

For all of the above, and networking, storage, security, and anything else you can imagine.

But why would we change?

FOR THE COMMUNITY

More independence

FOR OUR PARTNERS

More flexibility

FOR OUR CUSTOMERS

More control

FOR ANSIBLE

More innovation

Introducing Collections

A new way to create, package, and distribute Ansible Content

Repository structure and artifact to enable simple delivery of Ansible Content (Roles, Modules, and Plugins)

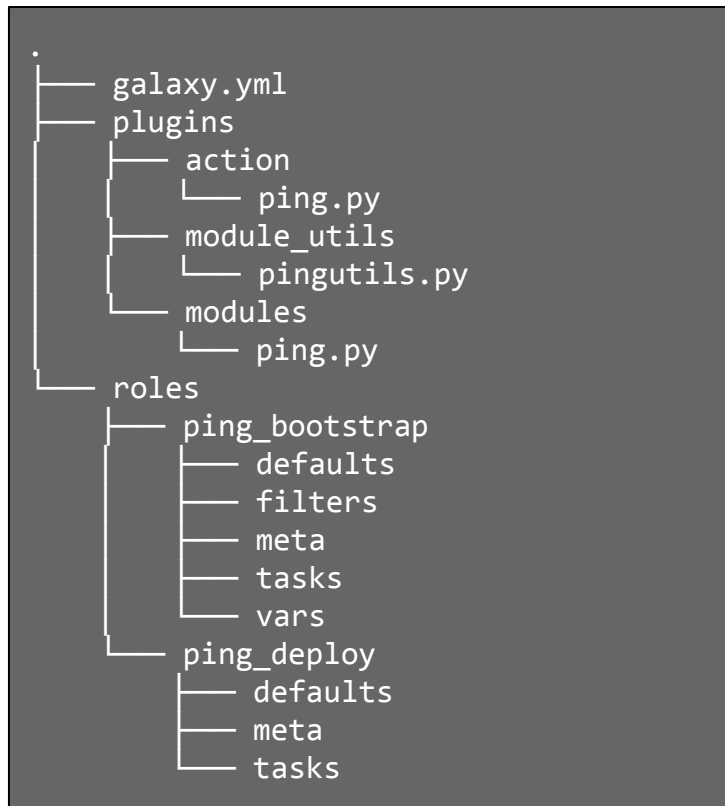

- A format for consistent project structure while in development
- Enables versioning of external content
- Allows consistent delivery outside of Ansible packages

Allows for immediate use of the content found within the Artifact within a play

Namespacing support built into platform to account for content in a Collection

Example Collection

Layout

In a playbook

```
hosts: somehosts
collections:
  - tima.pinger
  - redhat.open_ping

tasks:
  - tima.pinger.ping:

  - ansible.builtin.ping: # use only the ping packaged in core

  - ansible.legacy.ping: # use core or library(etc)/ping.py
    when: thing | tima.pinger.filter == 42

  - ping: # searches collections "path" otherwise...
    # still works, == ansible.legacy.ping:
```

Example galaxy.yml

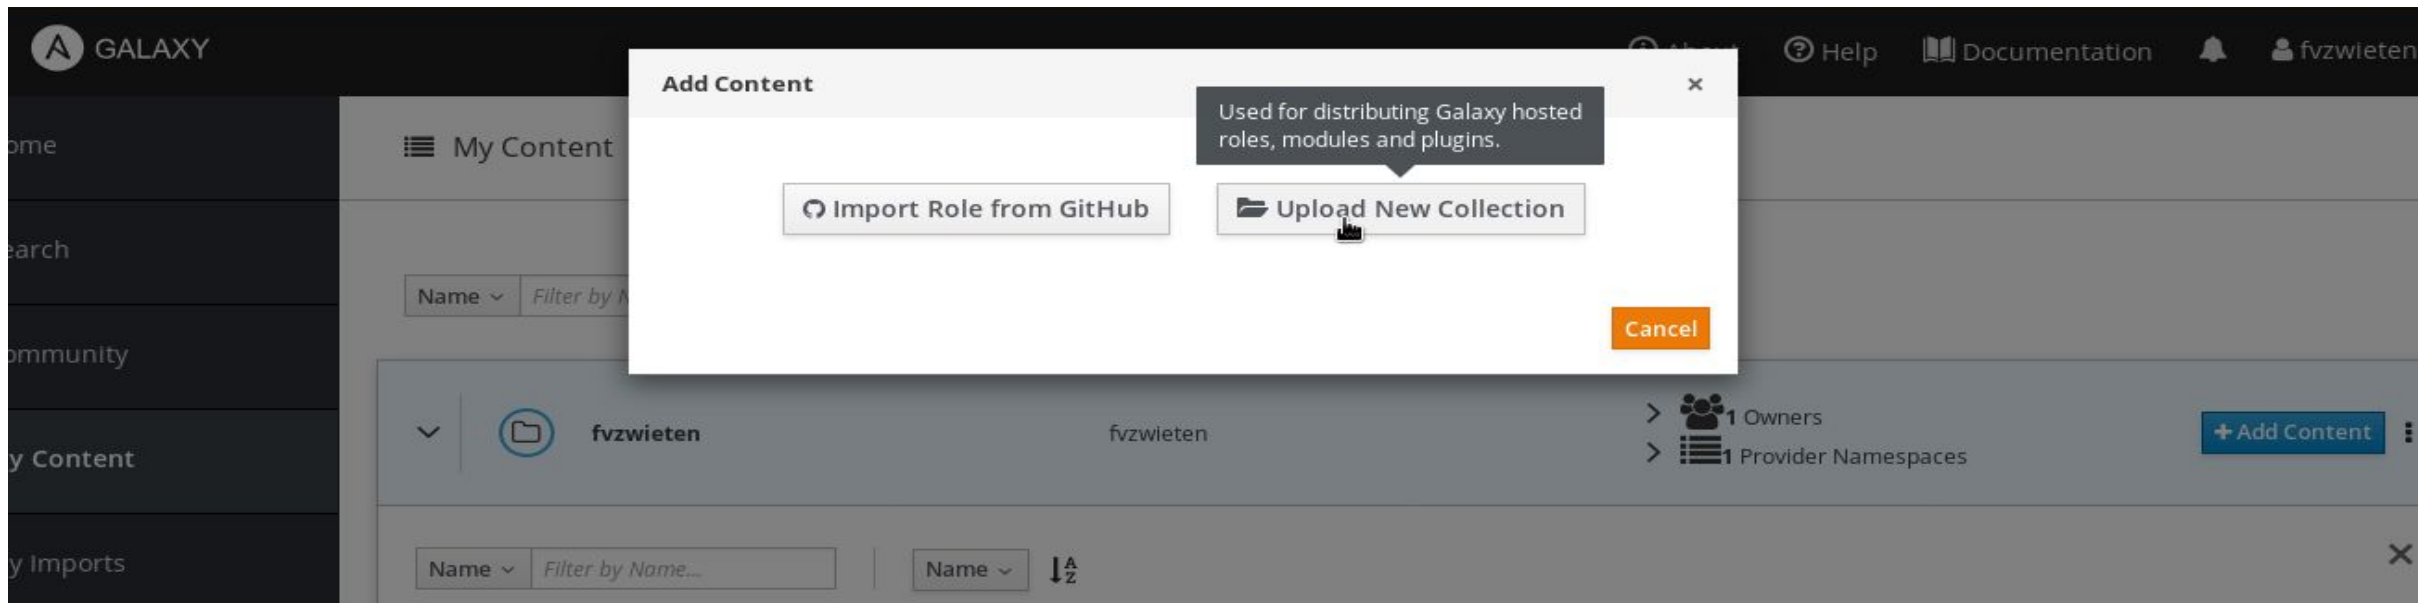

```
namespace: "namespace_name"
name: "collection_name"
version: "1.0.12"
readme: "README.md"
authors:
  - "Author1"
  - "Author2 (http://author2.example.com)"
  - "Author3 <author3@example.com>"
dependencies:
  "other_namespace.collection1": ">=1.0.0"
  "other_namespace.collection2": ">=2.0.0,<3.0.0"
  "anderson55.my_collection": "*" # note: "*" selects the highest version available
license:
  - "MIT"
tags:
  - demo
  - collection
repository: "https://www.github.com/my_org/my_collection"
documentation: "http://my-docs.example.com"
homepage: "http://www.example.com"
issues: "https://www.github.com/my_org/my_collection/issues"
```

New ansible-galaxy sub-commands

The `ansible-galaxy collection` command implements (initially) the following sub commands:

- `init:` Create a basic collection skeleton based on the default template included with Ansible.
- `build:` Create a collection artifact that can be uploaded to Galaxy or your own repository.
- `publish:` Publish a built collection artifact to Galaxy.
- `install:` Install one or more collections.

Upload collection in galaxy website

Introducing the Automation Hub

Discover, publish, and manage your Ansible Collections

Introducing the Automation Hub, a new service available to Ansible Automation subscribers.

Discover available Red Hat and Certified content.

Manage, audit, and test your organization's view of available content.

Manage your locally available automation via on-premise linkages.

Enabling Automation for All

Via Ansible Collections and Ansible Certified Content, and Ansible Tower

Manage your organization's approved content from public, partner, and private sources.

Choose your certified automation from you organization, provide a few parameters and go.

Create complex workflows without ever writing automation code.

The screenshot displays the 'Collections' page in the Red Hat Ansible Automation Platform. The interface includes a top navigation bar with the Red Hat logo and 'ansible insights' dropdown. A left sidebar provides navigation for 'Automation Analytics', 'Automation Hub', 'Collections', 'Partners', 'My Namespaces', 'My Imports', 'Catalog', and 'Settings'. The main content area is titled 'Collections' and features a search bar, a 'Name' dropdown, and a '1 - 7 of 7 items' indicator. A 'Tags' sidebar on the left lists 'network', 'cloud', 'package', and 'security'. The collection cards are arranged in a grid:

- cloud**: Provided by Google Cloud. Description: 'The Google Cloud Platform collection.' Statistics: 182 Modules, 0 Roles, 1 Plugin.
- f5_modules**: Provided by F5 Networks. Description: 'F5 Modules for Ansible'. Statistics: 161 Modules, 0 Roles, 16 Plugins.
- vyos**: Provided by Ansible. Description: 'Vyos Modules for Ansible'. Statistics: 25 Modules, 0 Roles, 0 Plugins.
- eos**: Provided by Arista. Description: 'Anisble modules for Arista EOS devices.' Statistics: 31 Modules, 0 Roles, 0 Plugins.
- nxos**: Provided by Cisco. Description: 'An Ansible collection for the Cisco NXOS network a...'. Statistics: 93 Modules, 0 Roles, 1 Plugin.
- azure**: Provided by Microsoft. Description: 'Roles for managing your Azure cloud services.' Statistics: 0 Modules, 1 Role, 0 Plugins.
- netconf**: Provided by Ansible. Description: 'Ansible Network Collection for Network NETCONF'. Statistics: 3 Modules, 0 Roles, 0 Plugins.

Each card also features a 'Certified' badge. The bottom of the page shows a pagination bar with '1 - 7 of 7 items' and '1 of 1 page'.

The screenshot displays the Red Hat Ansible Automation Platform interface. The top navigation bar includes the Red Hat logo, a search icon, and the text "ansible insights" next to a user profile icon. The left sidebar contains a navigation menu with the following items: "Red Hat Ansible Automation Platform", "Automation Analytics", "Automation Hub" (with a dropdown arrow), "Collections", "Partners" (highlighted), "My Namespaces", "My Imports", "Catalog" (with a right arrow), and "Settings" (with a right arrow). The main content area is titled "Partners" and features a search bar with the placeholder text "Search Partners", a magnifying glass icon, and a list icon. Below the search bar is a grid of 16 partner cards, each containing a logo, the company name, and a namespace identifier. The partners shown are: Aruba (hpe_aruba), CyberArk (cyberark), Check Point (check_point), NetApp (netapp), Google Cloud (google), Microsoft (microsoft), F5 Networks (f5), Cisco (cisco), Fortinet (fortinet), Arista (arista), Ansible (ansible), Dell EMC (dell_emc), Pure Storage (pure_storage), Rubrik (rubrik), Sensu (sensu), and Dynatrace (dynatrace). The bottom right of the main content area shows pagination information: "1 - 16 of 16 items" and "1 of 1 page".

Content Packages

Scalable Execution Capacity

Automate across and beyond the enterprise

Where you need it

Unifying task execution across execution nodes

When you need it

Leverage Kubernetes and OpenShift to spin up execution capacity at runtime

How you need it

Expand execution to be able to pull jobs from a central Ansible Tower infrastructure

Automation Webhooks

Enabling GitOps

Automatically provision, update, configure, and apply based on pushes to your source control.

Centralized Automation Console

Ansible Tower - collecting automation from anywhere

Record Ansible automation, no matter where in your infrastructure it's running.

- Red Hat Insights
- Ansible Operators in OpenShift
- Red Hat Satellite
- Red Hat CloudForms
- and more

Securely log and audit all automation.

Introducing Automation Analytics: Enabling an Automation Center of Excellence

View real-time information about automation health, usage and performance across your enterprise. Powered by the Red Hat Cloud Platform.

Gain information about automation in your organization:

- Which organizations are using the most automation
- Utilization rates
- Enterprise-wide success and failure rates for automation
- If automation is failing in certain cases, *why?*

Ansible Developer Kit

Persona derived tool sets for the creation, development, and testing of Ansible Collections.

- Develop, test, build, and publish content with ease
- Tools for linting, verifying, and testing roles and modules
- Building on `ansible-galaxy`, `ansible-lint`, `ansible-test`, and other tools
- Integration into IDE's*

Ansible Networking

Building resource-based management

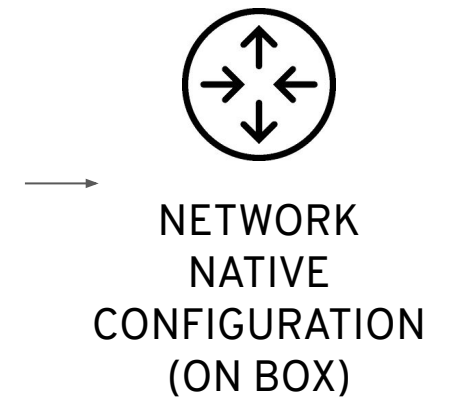

Fact modules transform network configuration into structured data.

```
snmp:
  communities:      <list>
  - community:     <string>
    group:         <string>
    ipv4acl:       <string>
    ipv6acl:       <string>
  contact:         <string>
  location:        <string>
  users:          <list>
  - algorithm:    <md5|sha>
    group:        <string>
    localized_key: <bool>
    password:     <string>
    username:     <string>
```

Resource modules transform structured data into configurations.

```
snmp:
  communities:      <list>
  - community:     <string>
    group:         <string>
    ipv4acl:       <string>
    ipv6acl:       <string>
  contact:         <string>
  location:        <string>
  users:          <list>
  - algorithm:    <md5|sha>
    group:        <string>
    localized_key: <bool>
    password:     <string>
    username:     <string>
```

Ansible Security Automation

Triage Of Suspicious Activities

Enabling programmatic access to log configurations such as destination, verbosity, etc.

Threat Hunting

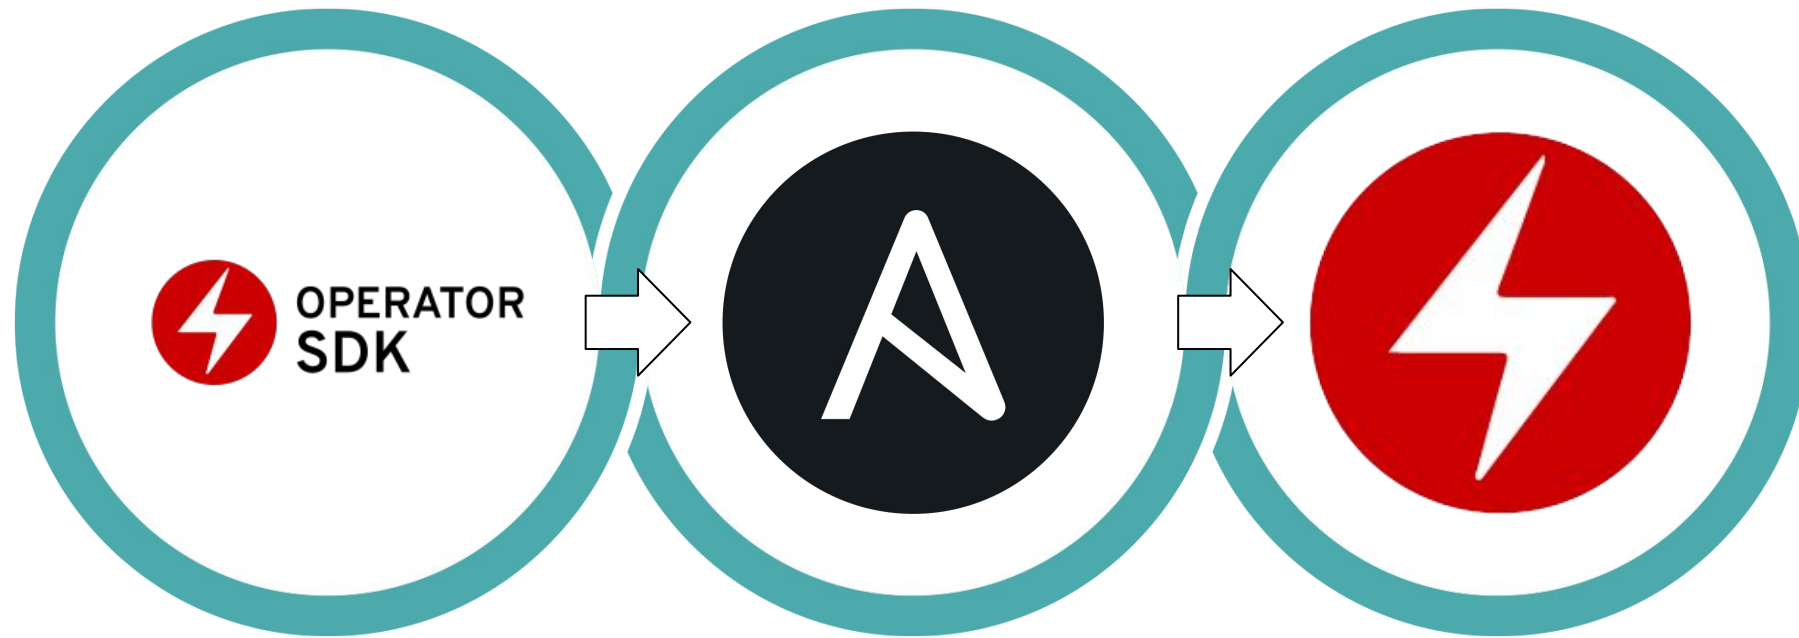

Automating alerts, correlation searches and signature manipulation

Incident Response

Creating new security policies to whitelist, blacklist or quarantine a machine

Ansible Operator SDK for Kubernetes Application Management

operator-sdk new

Use the Operator SDK to create a new skeleton Operator.

Add Ansible Roles/Playbooks

Use Ansible roles and playbooks to manage lifecycle events for your containerized applications.

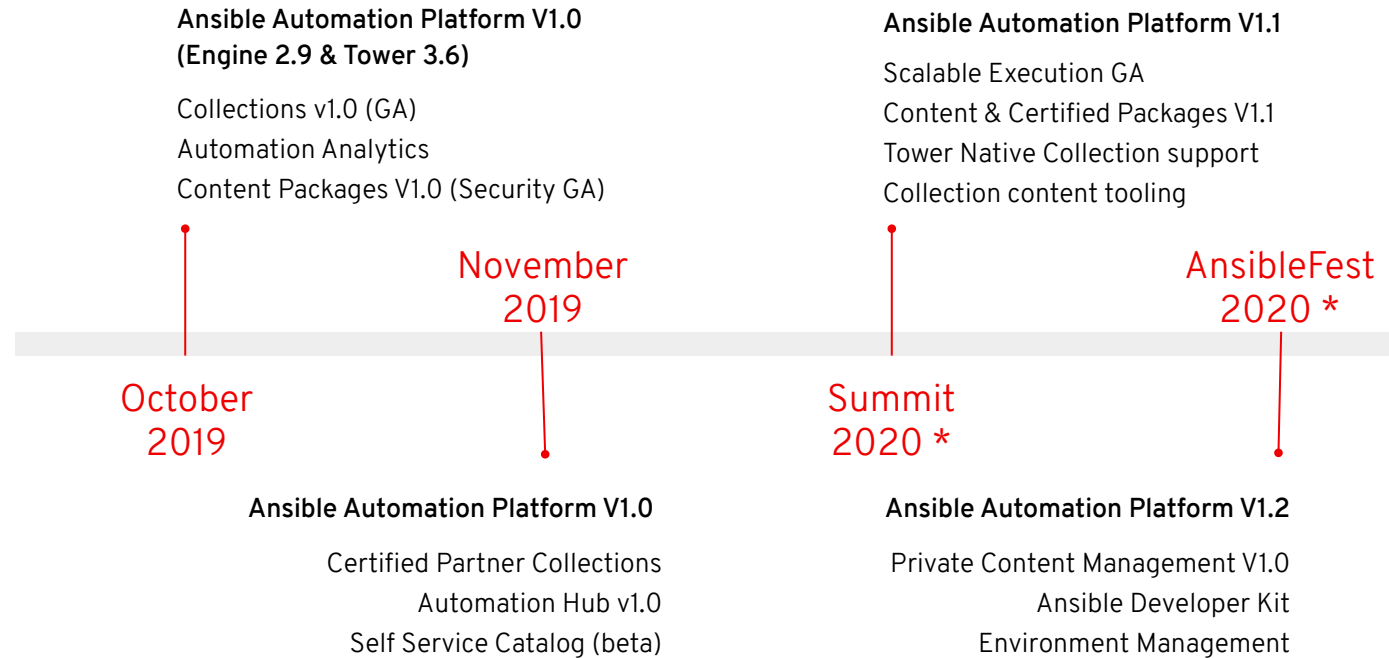

operator-sdk build

Use the Operator SDK to build and deploy your Operator to Kubernetes.

Roadmap Timeline

Red Hat Ansible Automation Futures

As we move forward with the Automation Platform, we will continue to release additional capabilities into the Platform offering

* all features for 2020 are yet to be confirmed until committed to a published release

May
2019

Now available

Collections (beta)
Collection support in Ansible Galaxy
Support for RHEL 8
External Credential Vault Integrations
Tower Cluster Metrics

Fall
2019

Initial release of the Automation Platform

Automation Analytics
Collections (GA)
Automation Hub launch
- Certified Partner content home
- Delivery of Collections to subscribers
Basic collection support in Tower
Git Webhooks
Scalable execution in OpenShift/Kubernetes (tech preview)
Security Automation (GA)
Network Automation Collections introduced

Spring 2020 and beyond

Collection synchronization and management in Tower

Direct Collection use in Workflows

Ansible content now delivered in Collections

On-premise content management in Automation Hub

On-demand execution scaling outside of OpenShift/Kubernetes

Networking Automation reference architectures

Collections for additional Automation use cases

Developer tools for content testing and publishing
