

Accelerate into an Open Future with a robust cloud environment by Cisco & Red Hat

Ami Ben-Amram, Data Center Solution Specialist, amib@cisco.com

February, 2017

<https://www.youtube.com/watch?v=By7q5fZ6XW8>

OpenStack Day Agenda

09:45 - 10:00 **Welcoming & Opening**

10:00 - 10:30 **Red Hat & Cisco's joint offering - Providing Enterprise Choice with Integrated Infrastructure for OpenStack**
by [Ami Ben-Amram](#), Data Center Solutions Specialist

10:30 - 11:00 What's new in Red Hat OpenStack Platform - When your cloud performs better, so does your business
by [Yariv Rahamani](#), Cross NFV Team Lead, Red Hat

11:00 - 11:30 **New Cisco UCS S-Series & Red Hat Software Defined Storage**
by [Taco Scargo](#), Senior Solution Architect at Red Hat

11:30 - 11:45 Coffee, Sweets & Networking

11:45 - 12:30 **The power of ACI with OpenStack**
by [Meir Roth](#), Systems Engineer at Cisco

12:30 – 13:00 Joint Customer Success Story: Building your Private Cloud with Red Hat OpenStack & Red Hat CEPH Storage - from POC to production deployment in 2 weeks by [Orgad Kimchi](#), Senior Cloud Architect at Red Hat

13:00 Q&A , Lunch & Networking

Red Hat & Cisco's joint offering - Providing Enterprise Choice with Integrated Infrastructure for OpenStack

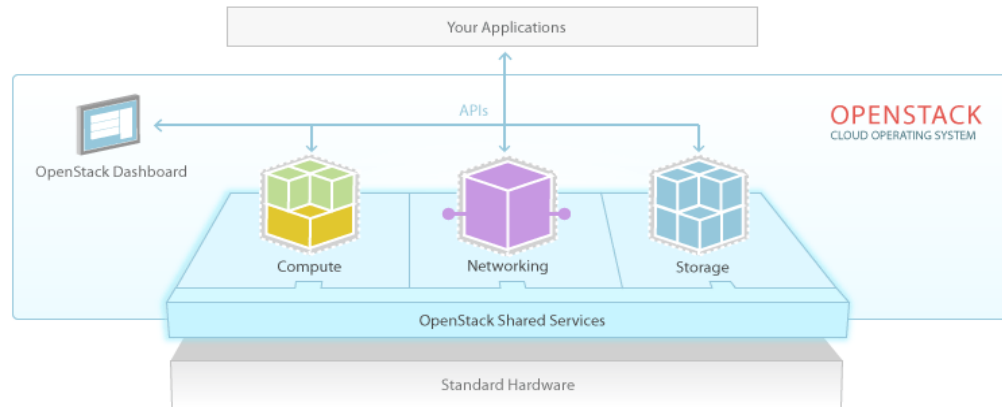

Ami Ben-Amram, Data Center Solution Specialist, amib@cisco.com

What is OpenStack?

“OpenStack is a cloud operating system that controls large pools of compute, storage, and networking resources throughout a datacenter, all managed through a dashboard that gives administrators control while empowering their users to provision resources through a web interface.”

What is OpenStack?

Open stack Components and Services

Neutron
(Networking)

Nova
(Compute)

Storage

Glance

Swift

Cinder

Ceph

Horizon
(GUI Dashboard)

Heat
(Orchestration)

Keystone
(Identity)

Ceilometer
(Telemetry)

Nova and Glance:

Nova service delivers virtualization platform with the images stored in Glance

Neutron:

Networking service between interface devices and other open stack services

Modular Plugins if needed

Storage:

Storage as a service

Swift – Object storage for tenants

Cinder – Block Storage as Service

Ceph – Open source Software integrated

Heat Orchestration:

Automation tool

Integration with Chef and Puppet

Instantiates images, network and storage resources

Keystone:

Identity service and is a data-store for tenants, projects and provides tokens to access API's

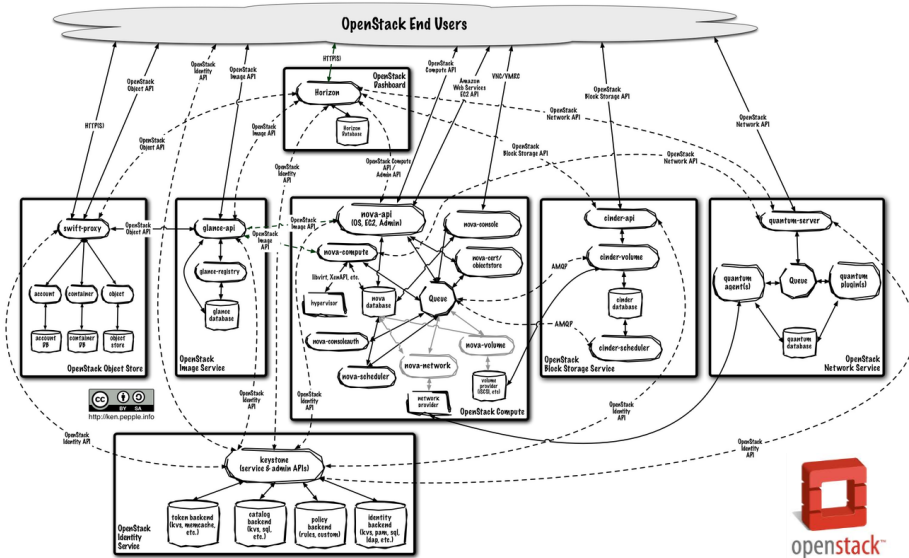

Horizon:

GUI dashboard for admins and tenants

Ceilometer:

Part of telemetry project and used for customer billing, resource tracking, etc.

OpenStack is Not Simple

- OpenStack is NOT a single software package
- There is no **1-800-OpenStack** number
- **NO clean upgrade path** when moving to a newer version
- Deployments are highly customizable, if the installer leaves your company, **you are compromised**
- **Scaling OpenStack is very hard**

IT Challenges of Implementing OpenStack

Support

- Most distributions are community supported
- Support is message boards and email
- No single point of contact

Deployment

- Many deployment methods
- Many package / update systems
- Best practices on specific architectures?

Complexity

- Other OpenStack ancillary projects
- Which distribution?
- Which deployment system?

Business Challenges of Implementing OpenStack

Speed of Deployment

- Integration and testing components
- Consistency of deployments
- Achieve fast payback and ROI

Risk Management

- Stable platforms
- Supportable configurations
- Cost-efficient scale-out
- Access to skilled staff

Retain Flexibility

- Future agility and choice
- Investment protection
- Avoid vendor lock-in

Better understand on how
integrated OpenStack solutions ...
accelerate time to value and reduce risk
... so that you can quickly deploy a
reliable cloud environment.

Cisco and Red Hat – Market Leaders

Red Hat – #1 in Enterprise

- World's leading provider of Open Source Software, Services, and Support – largest Linux and OpenStack ecosystem
- 90%+ of the Fortune 500 run Red Hat
- #1 code contributor to OpenStack

Cisco – #1 in Enterprise

- World's leading provider of integrated infrastructure for the datacenter
- Market share leader in x86 Blade Servers with 50,000+ customers
- Pioneering OpenStack partner
- In Israel – 700 customers, MOD Selected server vendor.

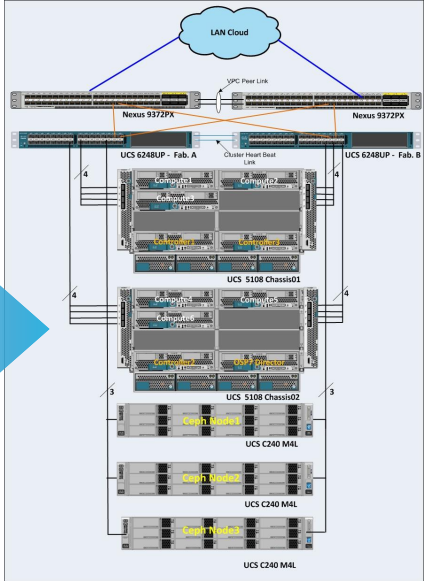

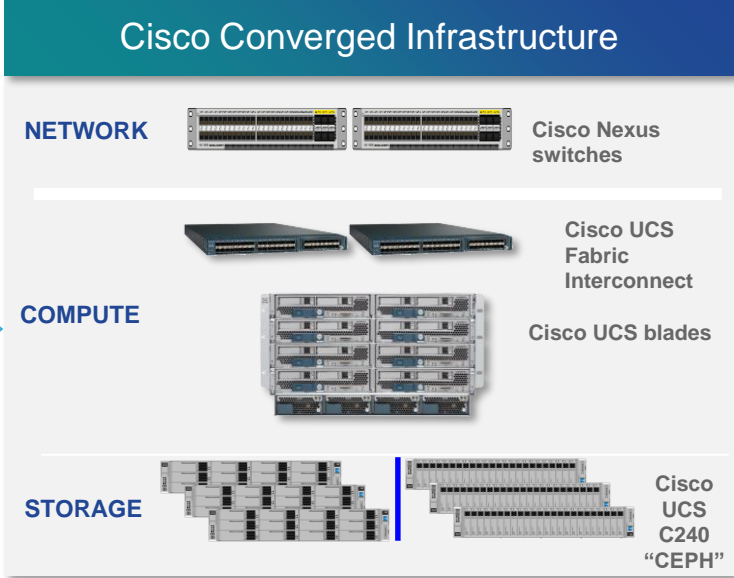

Open stack on Cisco UCS – A Solution !!!

Form-factor independence

Cisco UCS—One Management Platform

UCS Manager

UCS Director

Edge

Core Data Center

Cloud

Stateless Computing: UCS Service Profiles

Cisco UCS Service Profile

- NIC MACs
- HBA WWNs
- Server UUID
- VLAN Assignments
- VLAN Tagging
- FC Fabrics Assignments
- FC Boot Parameters
- Number of vNICs
- Boot order
- PXE settings
- IPMI Settings
- Number of vHBAs
- QoS
- Call Home
- Template Association
- Org & Sub Org Assoc.
- Server Pool Association
- Statistic Thresholds
- BIOS scrub actions
- Disk scrub actions
- BIOS firmware
- Adapter firmware
- BMC firmware
- RAID settings
- Advanced NIC settings
- Serial over LAN settings
- BIOS Settings

UCS: Embedded Automation for Blade and Rack Servers

Integrated, Policy-Based Infrastructure Management

- 1 Subject matter **expert** define policies
- 2 **Policies** used to create service profile **templates**
- 3 Service profile templates create **service profiles**
- 4 Associating service profiles with hardware **configures** servers automatically

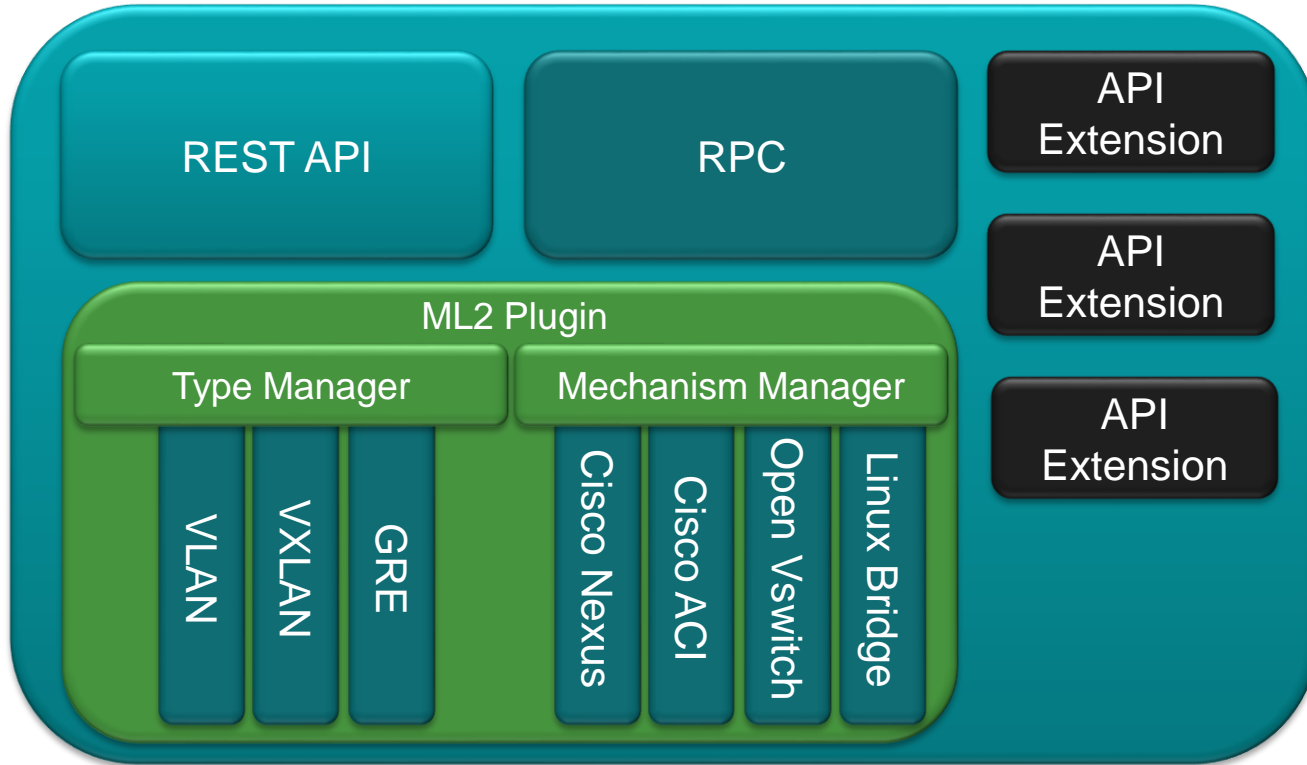

Nexus 9372, 48x10G, 6x40G.

Figure 2. Cisco Nexus 9372PX-E Switch

The Cisco Nexus 9372TX and 9372TX-E Switches are 1RU switches that support 1.44 Tbps of bandwidth and over 1150 mpps across 48 fixed 10-Gbps BASE-T ports and 6 fixed 40-Gbps QSFP+ ports (Figure 3). The Cisco Nexus 9372TX-E is a minor hardware revision of the Cisco Nexus 9372TX. Enhancements in the hardware are transparent in NX-OS mode and offer feature parity.

Neutron Service

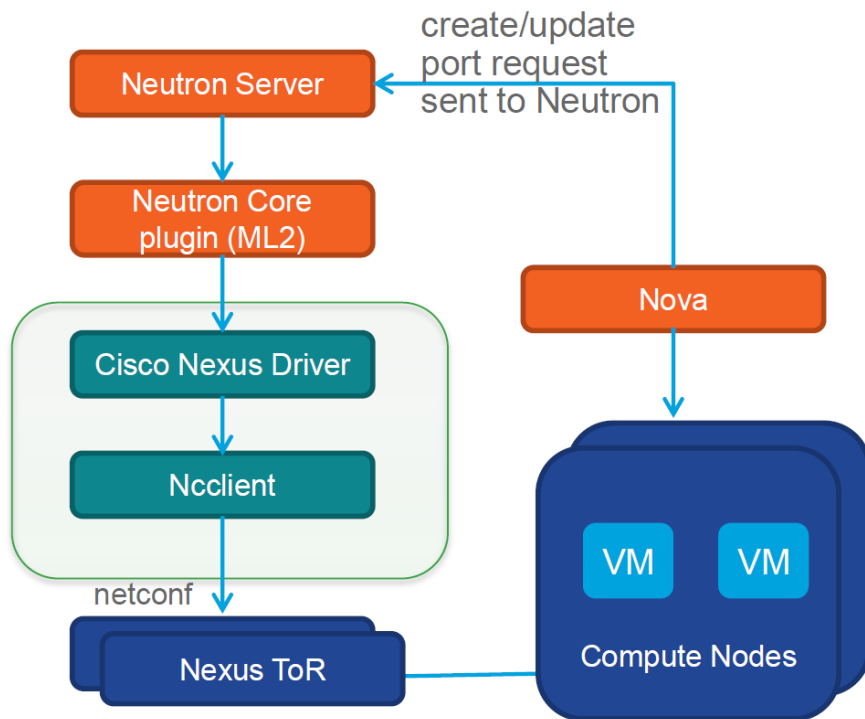

Use case: What does Neutron enable DevOps to Do?

Application Developer Would Like to:

- Create two networks
- Connect three web servers
- Connect new network to public network
- Create a load balancer
- Connect a DB instance
- Update firewall configurations automatically

Neutron Cisco Nexus Driver

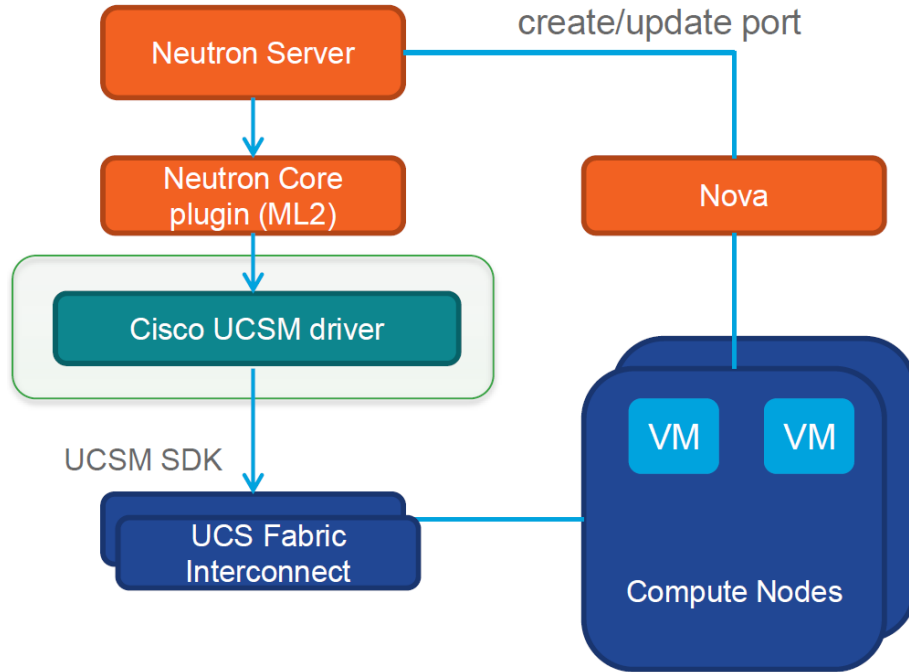

Features

- Works with multiple Nexus platforms
- VLAN configuration
- VXLAN configuration
 - Nexus_VXLAN Type Driver
 - Multicast
 - VLAN to VNI association

Benefits

- No Trunk all tenant VLANs on compute node interfaces on ToR
- Dynamic provisioning/deprovisioning on ToR
- Network based overlays

Neutron Cisco UCSM Driver (KVM)

Features:

- Supports VLAN configuration of SR-IOV ports (using port profiles) and vNIC ports (using Service Profiles)
- Nova and Neutron enhancements to support SR-IOV
- Enables configuration of VLAN profiles and automatic association with network ports
- Support for multiple UCSM domains and discovery of blades (hosts) to Service Profile mapping

Benefits

- SR-IOV and non SR-IOV based UCS Fabric Interconnect configurations
- High network performance bypassing hypervisor switch

OpenStack Cisco Plugins/Drivers and Community Projects

The following table captures the various Cisco infrastructure based products that have integration with OpenStack.

<https://developer.cisco.com/site/openstack/downloads/openstack-integration/>

Cisco product integrations with OpenStack

Purpose	Using	Cisco Product	OpenStack Service Integration	Kilo Code Availability	Liberty Code Availability

To Clear The Mess: Cisco Validated Design Faster Time-to-Value for OpenStack Clouds

Cisco UCS Integrated Infrastructure and Red Hat Enterprise Linux OpenStack Platform

- Cisco Validated Design and Deployment Guides

Key Benefits:

- Easier, faster deployment and agile configuration
- Lower OpEx with Cisco UCS Integrated Infrastructure
- Less risk with proven OpenStack distribution
- Policy-driven, software-defined infrastructure management with Nexus 9000 and ACI ready

redhat.

Cisco UCS Integrated Infrastructure with Red Hat OpenStack Platform 8 and Red Hat Ceph Storage

Deployment Guide

What's in it for customers?

Two words: *minimized risk*.

- There is always risk in any large-scale IT initiative.
- There are two types of risk:
 - *integration risk*, risk that products won't work together
 - *performance risk*, risk that they won't perform as promised.

Using a CVD minimizes both these risks.

"הכל צפוי והרשות (לא) נתונה"

Table 1 Required Hardware Components

	Hardware	Quantity	Firmware Details
OSP director	Cisco UCS B200M4 blade	1	
Controller	Cisco UCS B200M4 blade	3

Table 5 Cabling Details

Local Device	Cable Order	Cable Type	Local Port	Connection	Remote Device	Remote Port	Purpose
Cisco UCS Fabric Interconnect A	1	10G Twin-Ax	Eth1/1	10GbE/FCoE	Chassis 1 FEXA (left)	port 1	To connect UCS chassis1 to UCS Fabric InterconnectA
	2	10G Twin-Ax	Eth1/2	10GbE/FCoE	Chassis 1 FEXA (left)	port 2	To connect UCS chassis1 to UCS Fabric InterconnectA
	3	10G Twin-Ax	Eth1/3	10GbE/FCoE	Chassis 1 FEXA (left)	port 3	To connect UCS chassis1 to UCS Fabric InterconnectA
	4	10G Twin-Ax	Eth1/4	10GbE/FCoE	Chassis 1 FEXA (left)	port 4	To connect UCS chassis1 to UCS Fabric InterconnectA
	5	10G Twin-Ax	Eth1/5	10GbE/FCoE	Chassis 2 FEXA (left)	port 1	To connect UCS chassis2 to UCS Fabric InterconnectA
	6	10G Twin-Ax	Eth1/6	10GbE/FCoE	Chassis 2 FEXA (left)	port 2	To connect UCS chassis2 to UCS Fabric InterconnectA
	7	10G Twin-Ax	Eth1/7	10GbE/FCoE	Chassis 2 FEXA (left)	port 3	To connect UCS chassis2 to UCS Fabric InterconnectA
	8	10G Twin-Ax	Eth1/8	10GbE/FCoE	Chassis 2 FEXA (left)	port 4	To connect UCS chassis2 to UCS Fabric InterconnectA
	9	10G Twin-Ax	Eth1/9	10GbE/FCoE	C240 M4 - Server1 - VIC1227	Port 1	To connect UCS C240 Srv1 to UCS Fabric InterconnectA
	10	10G Twin-Ax	Eth1/10	10GbE/FCoE	C240 M4 - Server2 - VIC1227	Port 1	To connect UCS C240 Srv2 to UCS Fabric InterconnectA
	11	10G Twin-Ax	Eth1/11	10GbE/FCoE	C240 M4 - Server3 - VIC1227	Port 1	To connect UCS C240 Srv3 to UCS Fabric InterconnectA
Cisco UCS Fabric Interconnect B	3	10G Twin-Ax	Eth1/17	10GbE/FCoE	Nexus 9372 Switch A	Eth 1/17	To connect UCS F1A Networks to Nexus 9k switch A
	4	10G Twin-Ax	Eth1/18	10GbE/FCoE	Nexus 9372 Switch B	Eth 1/17	To connect UCS F1B Networks to Nexus 9k switch B
	1	1G RJ 45	MGMT0	1GbE	Any Management Switch (TOR)	Any	To Connect Management of UCS Fabric Interconnect
	2	1G RJ 45	L1	1GbE	UCS Fabric Interconnect B	L1	Cluster connection between UCS F1A and UCS Fabric Interconnect B
	3	1G RJ 45	L2	1GbE	UCS Fabric Interconnect B	L2	Cluster connection between UCS F1B and UCS Fabric Interconnect B
	12	10G Twin-Ax	Eth1/1	10GbE/FCoE	Chassis 1 FEX B (Right)	port 1	To connect UCS chassis1 to UCS Fabric InterconnectB
	13	10G Twin-Ax	Eth1/2	10GbE/FCoE	Chassis 1 FEX B (Right)	port 2	To connect UCS chassis1 to UCS Fabric InterconnectB

Instance creation work flow

Instance creation work flow

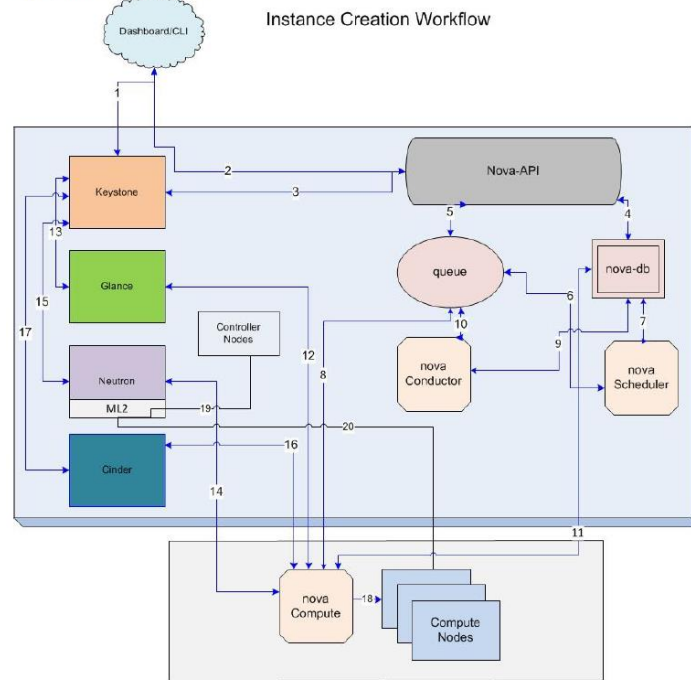

To create a virtual machine, complete the following steps:

1. Dashboard/CLI authenticates with Keystone.
2. Dashboard/CLI sends nova-boot to nova-api.
3. nova-api validates the token with keystone.
4. nova-api checks for conflicts, if not creates a new entry in database.
5. nova-api sends rpc.call to nova-scheduler and gets updated host-entry with host-id.
6. nova-scheduler picks up the request from the queue.
7. nova-scheduler sends the rpc.cast request to nova-compute for launching an instance on the appropriate host after applying filters.
8. nova-compute picks up the request from the queue.
9. nova-compute sends the rpc.call request to nova-conductor to fetch the instance information such as host ID and flavor (RAM, CPU, and Disk).
10. nova-conductor picks up the request from the queue.
11. nova-conductor interacts with nova-database and picks up instance information from queue.
12. nova-compute performs the REST with auth-token to glance-api. Then, nova-compute retrieves the Image URI from the Image Service, and loads the image from the image storage.
13. glance-api validates the auth-token with keystone and nova-compute gets the image data.
14. nova-compute performs the REST call to network API to allocated and configure the network.
15. neutron server validates the token and creates network info.
16. Nova-compute performs REST to volume API to attach volume to the instance.
17. Cinder-api validates the token and provides block storage info to nova-compute.
18. Nova compute generates data for the hypervisor driver.

26

Instance creation work flow

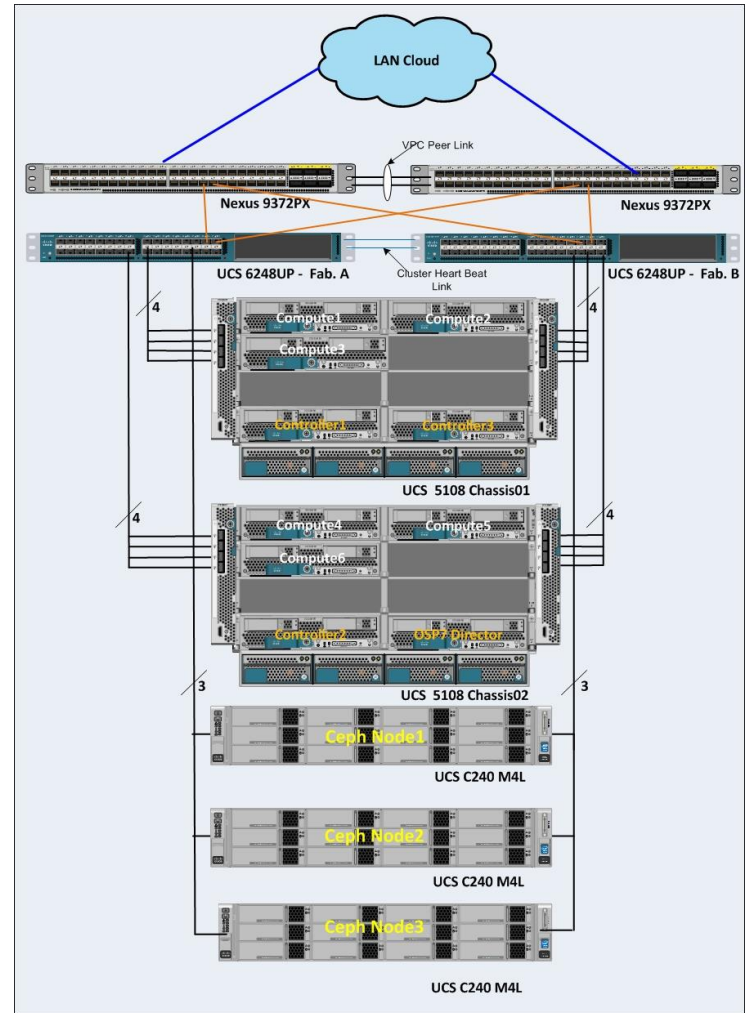

Figure 7 Instance Creation Workflow

Physical Topology

Nexus Switches – 2 x 9372
Fabric Interconnects – 2 x 6248
Controller Blades – 3 x B200M4
Director Blade – 1 x B200M4
Compute Blades – 6 x B200M4
Ceph Storage Nodes – 3 x C240M4L

POD tested with both C240M4L and C240M4S

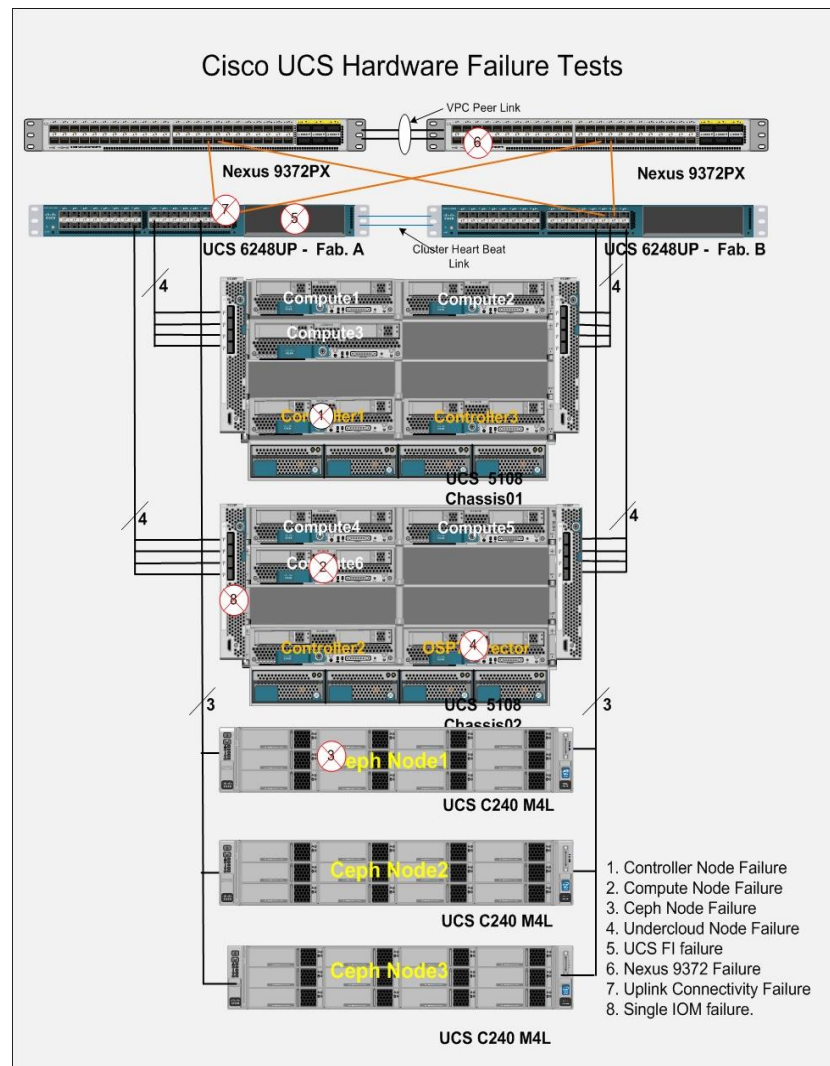

High Availability

	HA Test	Status
1	Reboot Controller Node	Passed
2	Reboot Compute Node	Passed
3	Reboot Ceph Node	Passed
4	Reboot Undercloud Node	Passed
5	Reboot UCS Fabric Interconnects	Passed
6	Reboot Nexus Switches	Passed
7	Uplink Connectivity	Passed
8	IOM Failures	Passed

	HA Test	Status
1	Pull Controller blade and rebuild	Workarounds
2	Pull Compute Node and rebuild	Passed
3	Power off Ceph node and rebuild	Passed
4	Power off Undercloud Node and rebuild	Backup server for rebuild

An alternative method to replace completely a controller was evolved and documented in the CVD
