Zero maintenance OpenShift cluster nodes

Basil Brunner, Solution Architect, Helvetia  
Insurance AG

# OpenShift Node Updates.

## Challenge.

## Solution.

# Helvetia Container Platform.

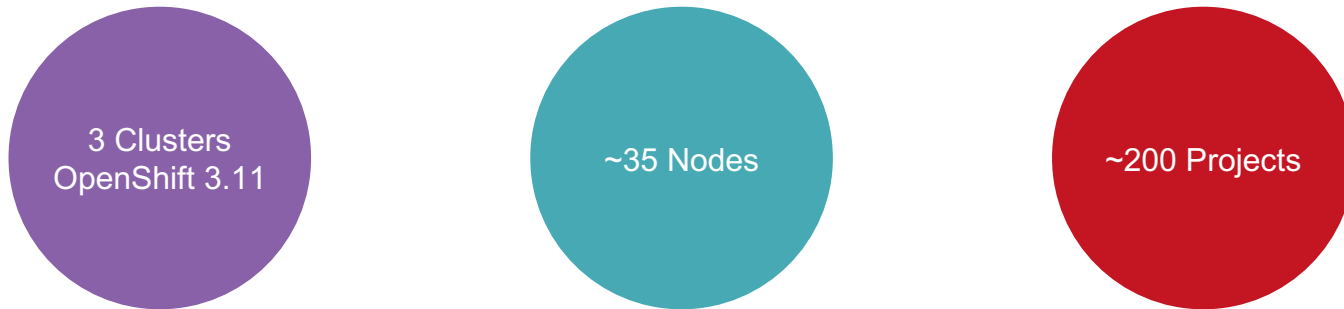

- Application Platform based on OpenShift
- Running on AWS
- Platform Features:
  - Self Service:
    - Storage
    - Database
    - Kafka Topics
    - Backup / Restore
  - Blueprints
  - CI/CD
  - Monitoring
  - Logging (Splunk)

Logging with Splunk:

- <https://red.ht/2YV17Z4>
- <https://youtu.be/66j70yBaWfg>

# Facts and Figures

- Migration of ~100 existing Java EE applications within next 12 months
- Default platform for new projects

# Challenge.

- Node Patching:
  - OS (Kernel, Libraries)
  - Tools
  - OpenShift
- Serial process (as nodes are unschedulable for some time)
- Time consuming & error prone
- **Goal:** Treating Nodes as Virtual Appliances

# Solution.

Immutable Infrastructure:  
<https://vimeo.com/272531337>

Primed Images:  
<https://red.ht/2KI0NnR>

- Immutable Nodes: Replacing rather than patching (like pods!)
- Primed Amazon Machine Image (AMI)
- Nodes controlled by Auto Scaling Group (ASG)
  - Start time < 3 minutes!

# Benefits.

- Much more confidence during node update process.
- Ready for Cluster Auto Scaling
  - Use cheaper spot instances for high load
  - Scale down development projects at night/over weekends
- SSH is no longer needed

**Thank you for  
your attention.**
