# BY THE NUMBERS

Hundreds of new features across Red Hat Enterprise Linux, KVM, oVIRT.

Bug Fixes and Feature Requests since 4.1.0:

- 1,850 BZs closed
- 350 features (RFEs) delivered

# MAJOR THEMES

- Ease of use
- Ease of automation
- Tighter integration with Red Hat Portfolio

# MANAGEMENT INTERFACES

## RED HAT VIRTUALIZATION MANAGER

- Designed for large scale (500+ hosts and 5,000+ VMs)
- REST API to integrate with Red Hat portfolio, third-party applications, backup and recovery software
- Can be integrated with existing infrastructure—active directory, Red Hat CloudForms®, OpenStack, etc.

## COCKPIT

- Included as part of Red Hat Virtualization Host image
- Used to configure networking, storage, tuning, subscriptions, and other aspects of the virtualization host
- Can be used to deploy Red Hat Virtualization in high availability

PATTERNFLY

# NEW USER INTERFACE

Get to important information faster, learn fewer tools, streamline operations

- Same PatternFly library as Red Hat portfolio
- At-a-glance, drill downs of the entire environment
- Easy, intuitive navigation
- Reduces learning curve
- Faster

# NEW USER INTERFACE

# Save your location as bookmark

The screenshot shows the Red Hat Virtualization web interface. The browser address bar contains the URL: `https://rhev.m.eng.lab.tlv.redhat.com/ovirt-engine/webadmin/?locale=en...S#vms;search=status+%25C2+up+and+ip+%25C2+10.35.19*`. A search filter is applied to the VMs table: `Vms: status = up and ip = 10.35.19*`. The table below lists various virtual machines with columns for Name, Comment, Host, IP Addresses, FQDN, Cluster, Data Center, Memory, CPU, Network, Graphics, Status, Uptime, and Description.

	Name	Comment	Host	IP Addresses	FQDN	Cluster	Data Center	Memory	CPU	Network	Graphics	Status	Uptime	Description

# NATIVE DISASTER RECOVERY

Business continuity without vendor lock-in

- Active/active cluster allows virtual machines to migrate to secondary site if primary site is unavailable.
- Integration with a specific storage vendor is not required.
- Failover and failback is automated with **Red Hat Ansible Automation**.
- Supports Block and file based storage

## WHICH USE CASES?

# NATIVE SOFTWARE DEFINED NETWORK (SDN)

PROVIDES NATIVE, ISOLATED NETWORKING FOR VIRTUALIZED WORKLOADS

- Neutron compatible API for OVN
- Mix and match host networking connectivity and isolated networks
- Full control of network, subnets, ports and routing
- Integrated with CloudForms, Cloud network management and OpenStack

## WHICH USE CASES?

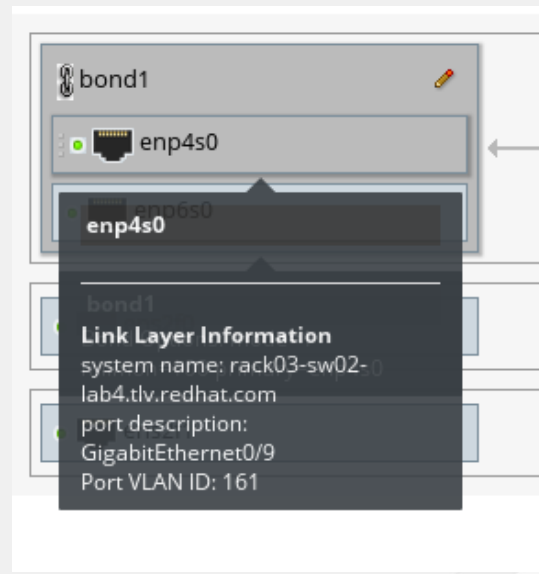

# CISCO ACI INTEGRATION

Integrated and automated SDN and distributed security policies

- Scalable network virtualization
- Distributed security policies
- Micro-segmentation
- Ability to automate Cisco ACI with Red Hat Virtualization using Red Hat Ansible Automation

*Hear more about it @ "Running RHV Integrated w/ Cisco ACI SDN" - Room 2020 on Thursday 5/10 , 2:00 - 2:20 PM*

# METRICS AND LOGGING

Real-time reporting and visualization for improved business efficiency

## INTEGRATION W/OPENSIFT METRICS STORE

- **Elasticsearch** – a search and analytics engine with a REST/http interface
- **Fluentd** – Data collector and shipper that unifies the metrics and logs data
- **Kibana** – Visualize trends in real time, slice and dice the data from Elasticsearch dynamically
- **Collectd** – Simple and powerful daemon that gathers metrics from various sources

# HIGH-PERFORMANCE VM TYPE

Streamline consistent tuning process for virtualization administrators

- Enable passthrough of host CPU to the VM
- Enable input/output (I/O) threads, num of I/O threads = 1
- Set the I/O and emulator threads pinning topology
- Disable non-critical devices (sounds, USB, balloon)
- Define as headless (no graphics device)

# DISK AND VM UPLOAD/DOWNLOAD IMPROVEMENTS

Storage deployment flexibility for virtualization architects

- Download **snapshots**, not just disks
- **Faster** uploads via direct uploads to hosts
- Efficient upload with **sparse** support
- **VM import and export** as Open Virtualization Appliance (OVA) files
- **Upload ISO disk images to data domain**  
- no need for a dedicated, NFS-based, ISO domain anymore!

# RHOSP UNDERCLOUD & OPENSIFT ON RHV

PNT DEVOPS TEAM

‘UpShift’ - platform for hosting containerized workloads.

Using **RHV** as IAAS, hosting both **RHOSP Undercloud** and **OpenShift** masters on VMs.

#RedHatOSD

## RHHI-1.5

- Deduplication and compression support with VDO
- Cockpit
  - **Scale using the user interface**
  - **Manage your storage and virtual machines**
- Admin portal
  - **Convert virtualization hosts**
  - **Configure disaster recovery with failover and failback**
  - **Upgrade using the user interface**
- **Deploy on a single node**

## RHV-4.2.7

- **Support of private VLAN by mean of filter for VNIC profiles (NWFILTER), `clean-traffic- gateway`**
- **Guest Time Synchronization.**
- **qemu-img out of order writing. Importing, moving or copying large disks to preallocated storage, can be up to 6 times faster.**
- **KVM Sparseness is now supported to preserve original VM image size during import (thin provisioning).**

### WHICH USE CASES?

# HIGHLIGHTS BEYOND RHV 4.2

- Storage and DR
  - Cinder Integration
  - **Incremental Backup**
- Multi-Arch Support
  - **Power 9, z Systems (TBD), ARM**
- Infrastructure Migration Support
  - **CloudForms / IMS**
- Portfolio Enablement
  - **OpenStack Control Plane on RHV**
- Support for hybrid, cloud-native application deployments and workloads
  - Service-based shared components (networking, storage, Glance...)
  - **Kubevirt as part of OpenShift/CNV/RHV.Next**
