WHAT IS ANSIBLE AUTOMATION ?

The Ansible project is an open source community sponsored by Red Hat. It's also a **simple automation language** that perfectly describes IT application environments in **Ansible Playbooks**.

Ansible Engine is a **supported product** built from the Ansible community project.

Ansible Tower is an **enterprise framework** for controlling, securing, managing and extending your Ansible automation with a **UI and RESTful API**.

ANSIBLE EVOLUTION

AUTOMATION FOR EVERYONE

EVEN I CAN RUN A PLAYBOOK :-)

A SIMPLE PLAYBOOK

- name: install and start apache

hosts: web

become: yes

vars:

http_port: 80

tasks:

- name: httpd package is present

yum:

name: httpd

state: latest

- name: latest index.html file is present

copy:

src: files/index.html

dest: /var/www/html/

- name: httpd is started

service:

name: httpd

state: started

TASK

PLAY

HOW ANSIBLE WORKS

Module code is executed locally on the control node

NETWORKING DEVICES

Module code is copied to the managed node, executed, then removed

LINUX/WINDOWS HOSTS

WHAT CAN I DO WITH ANSIBLE ?

Automate the deployment and management of your entire IT footprint.

Do this...

On these...

WHY ANSIBLE?

SIMPLE

- Human readable automation
- No special coding skills needed
- Tasks executed in order
- Usable by every team
- Get productive quickly

POWERFUL

- App deployment
- Configuration management
- Workflow orchestration
- Network automation
- Orchestrate the app lifecycle

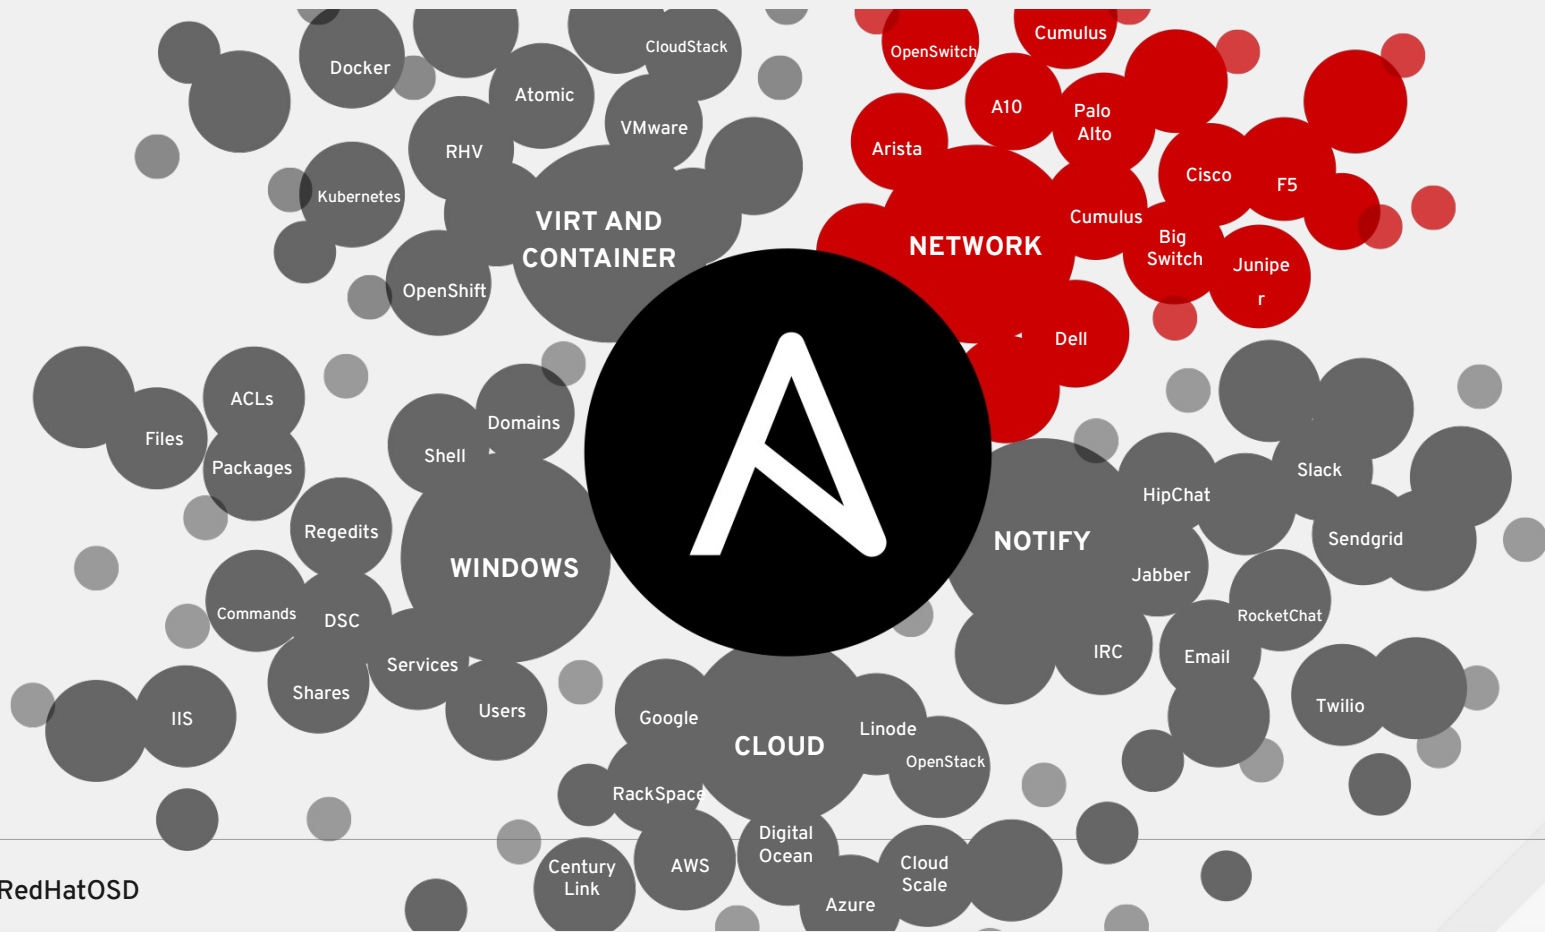

AGENTLESS

- Agentless architecture
- Uses OpenSSH & WinRM
- No agents to exploit or update
- Get started immediately
- More efficient & more secure

ANSIBLE AUTOMATES TECHNOLOGIES YOU USE

OVER 1900 MODULES

10,000 ROLES AT YOUR DISPOSAL

Re-usable Roles and Container Apps that allow you to do more, faster

Built into the Ansible CLI and Tower

PROXIMITY AUTOMATION WITH TOWER ISOLATED NODES

A Tower Isolated Node is a **headless Ansible Tower** that can be used for local execution capacity either in:

- Constrained networking environment (DMZ)
- Virtual Private Cloud
- Remote Data center/Plants/POPs
- Edge Computing

The only prerequisite is that there is **SSH connectivity** from the Tower Cluster to the Isolated Node

WHAT'S NEW IN ANSIBLE TOWER 3.3

TOWER AS A SERVICE

- Now deployable as a **container** in OpenShift
- **Dynamically scale & add capacity** Ansible Tower at runtime
- **Push-button Ansible Tower deployment for OpenShift users**

SECURITY

- More granular role-based permissions
- Run **multiple versions of Ansible Engine** in parallel
- New set of **permissions for admin users**

<https://www.ansible.com/blog/ansible-tower-3.3-available-now>

#RedHatOSD

WHAT'S NEW IN ANSIBLE TOWER 3.3

IMPROVED SCALING

- **Scale up and down** based on job capacity
- **Manage Instance Groups by policy**
- Instance Groups can be defined by **percentage of total cluster capacity**
