

Bringing the Database inside the Microservices World on Red Hat Openshift with Couchbase Data Platform

Daniele Paolucci - Lead Devops Engineer (Spindox)
Arduino Cascella - Solutions Engineer (Couchbase)

#RedHatOSD

AGENDA

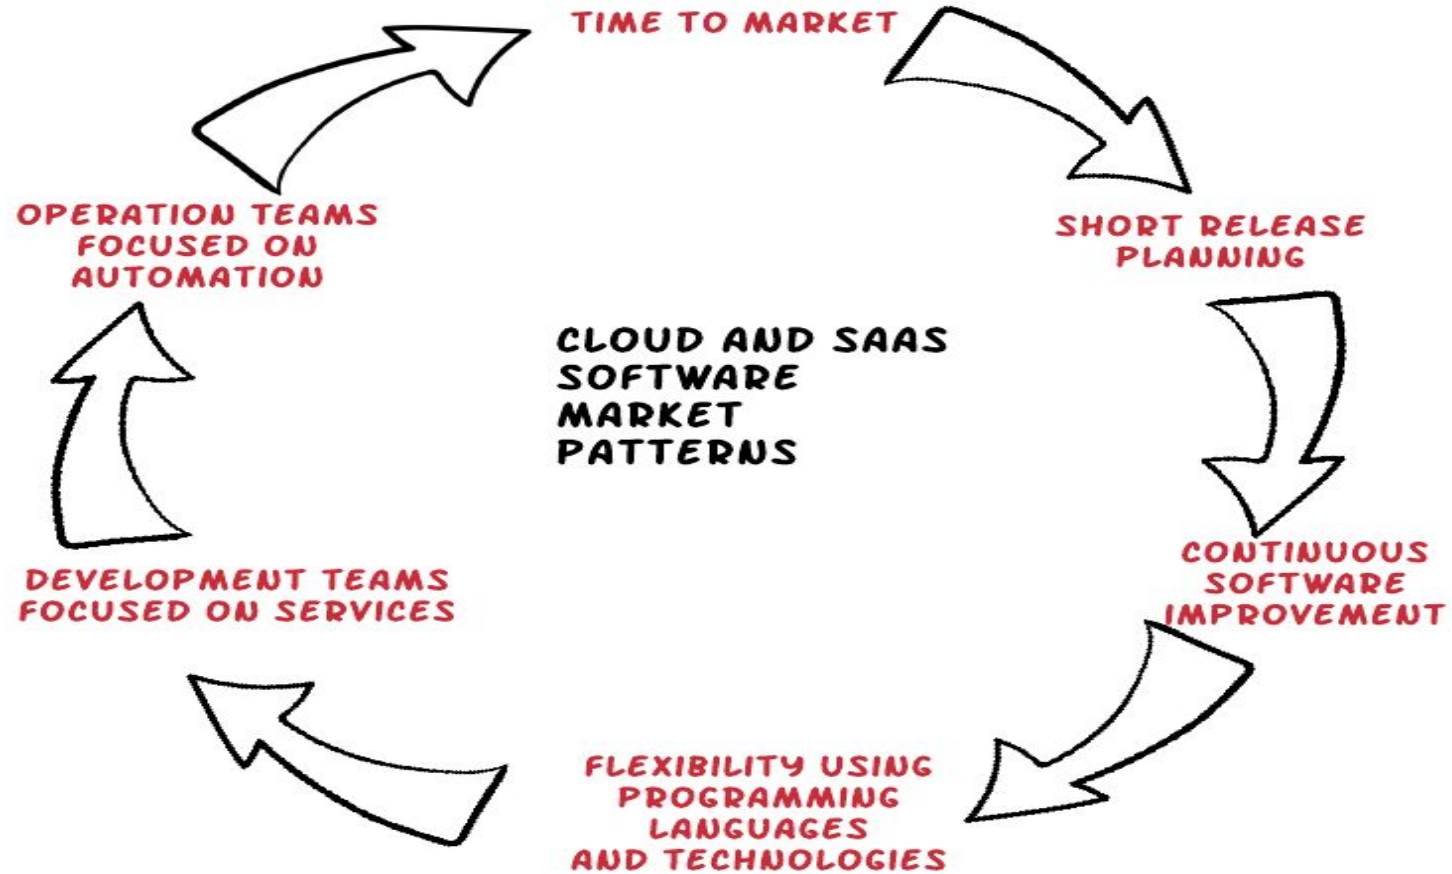

- 01 The Path From Monolith to Microservice Architecture
- 02 Microservices, Containers and Operations
- 03 Couchbase: The Data Platform For Containers
- 04 Couchbase Operator Demo
- 05 Example of Stateful Application

1) The Path From Monolithic to Microservices Architecture

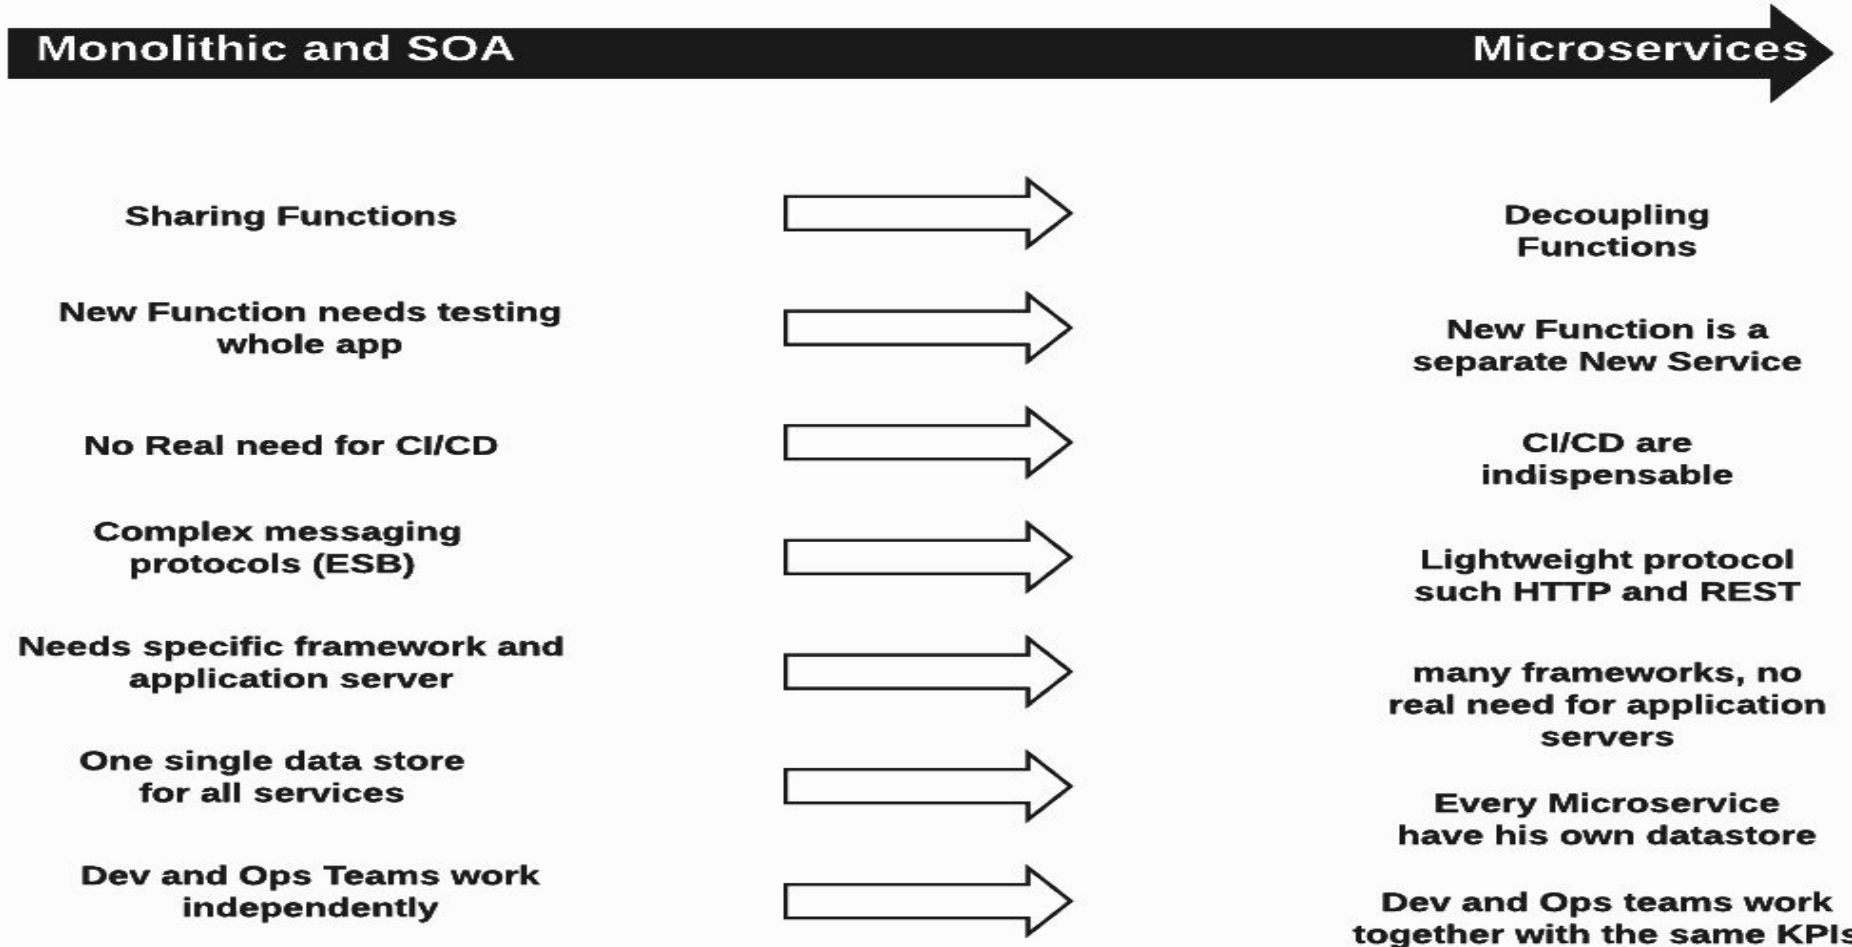

#RedHatOSD

Why Business requires Microservices

Pattern changes Between Monolithic and Microservices

Microservices Scalability: The Scale Cube

2) Microservices, Containers and Operations

Containers - An Evolution in Application Deployment

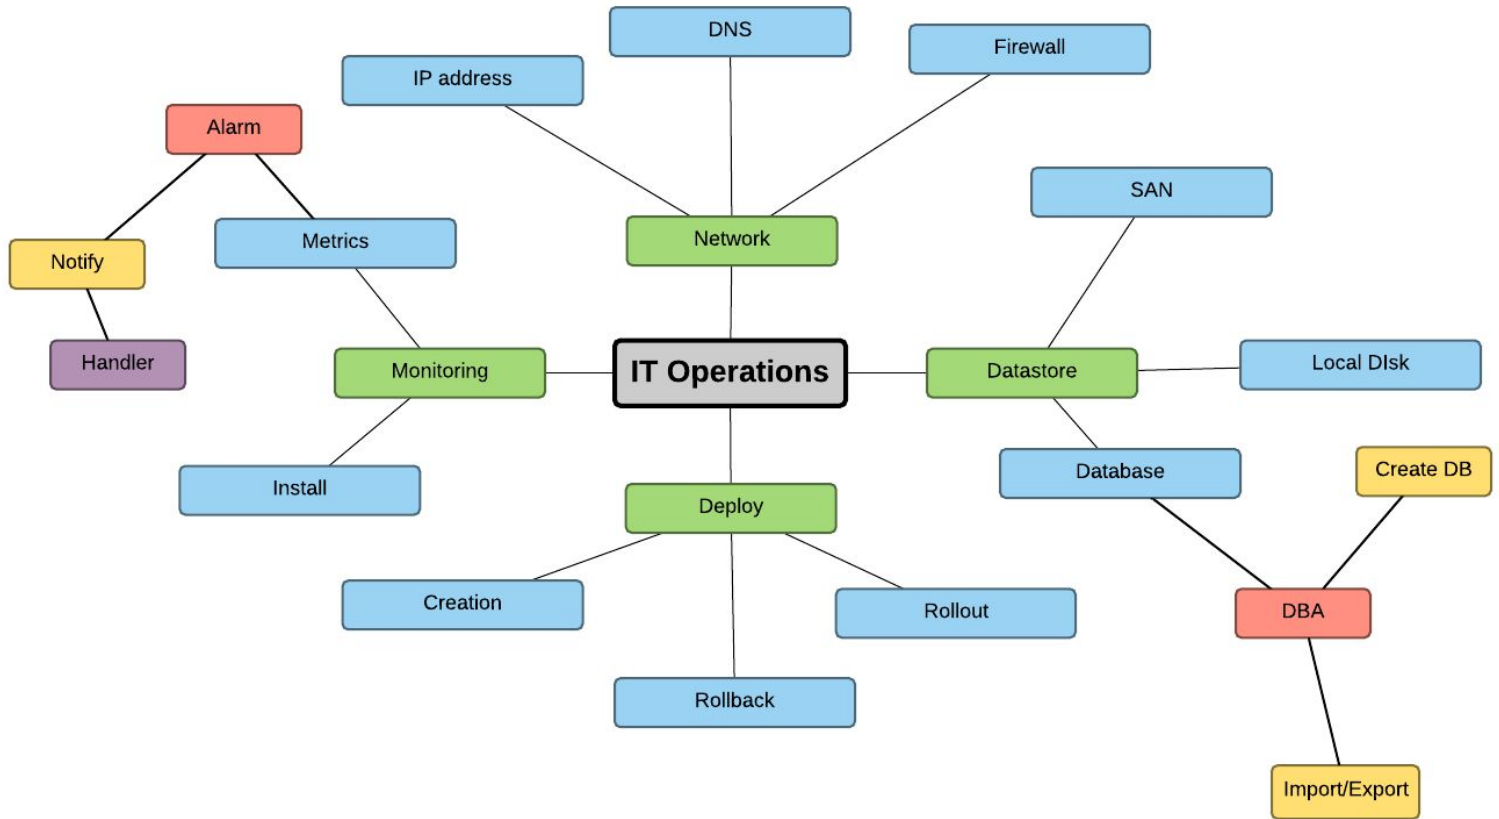

Containers enable:

- **Efficiency and automation** for microservices, but also support traditional applications
- **Faster and more consistent deployments** from Development to Production
- **Application portability** across 4 infrastructure footprints: Physical, Virtual, Private & Public Cloud

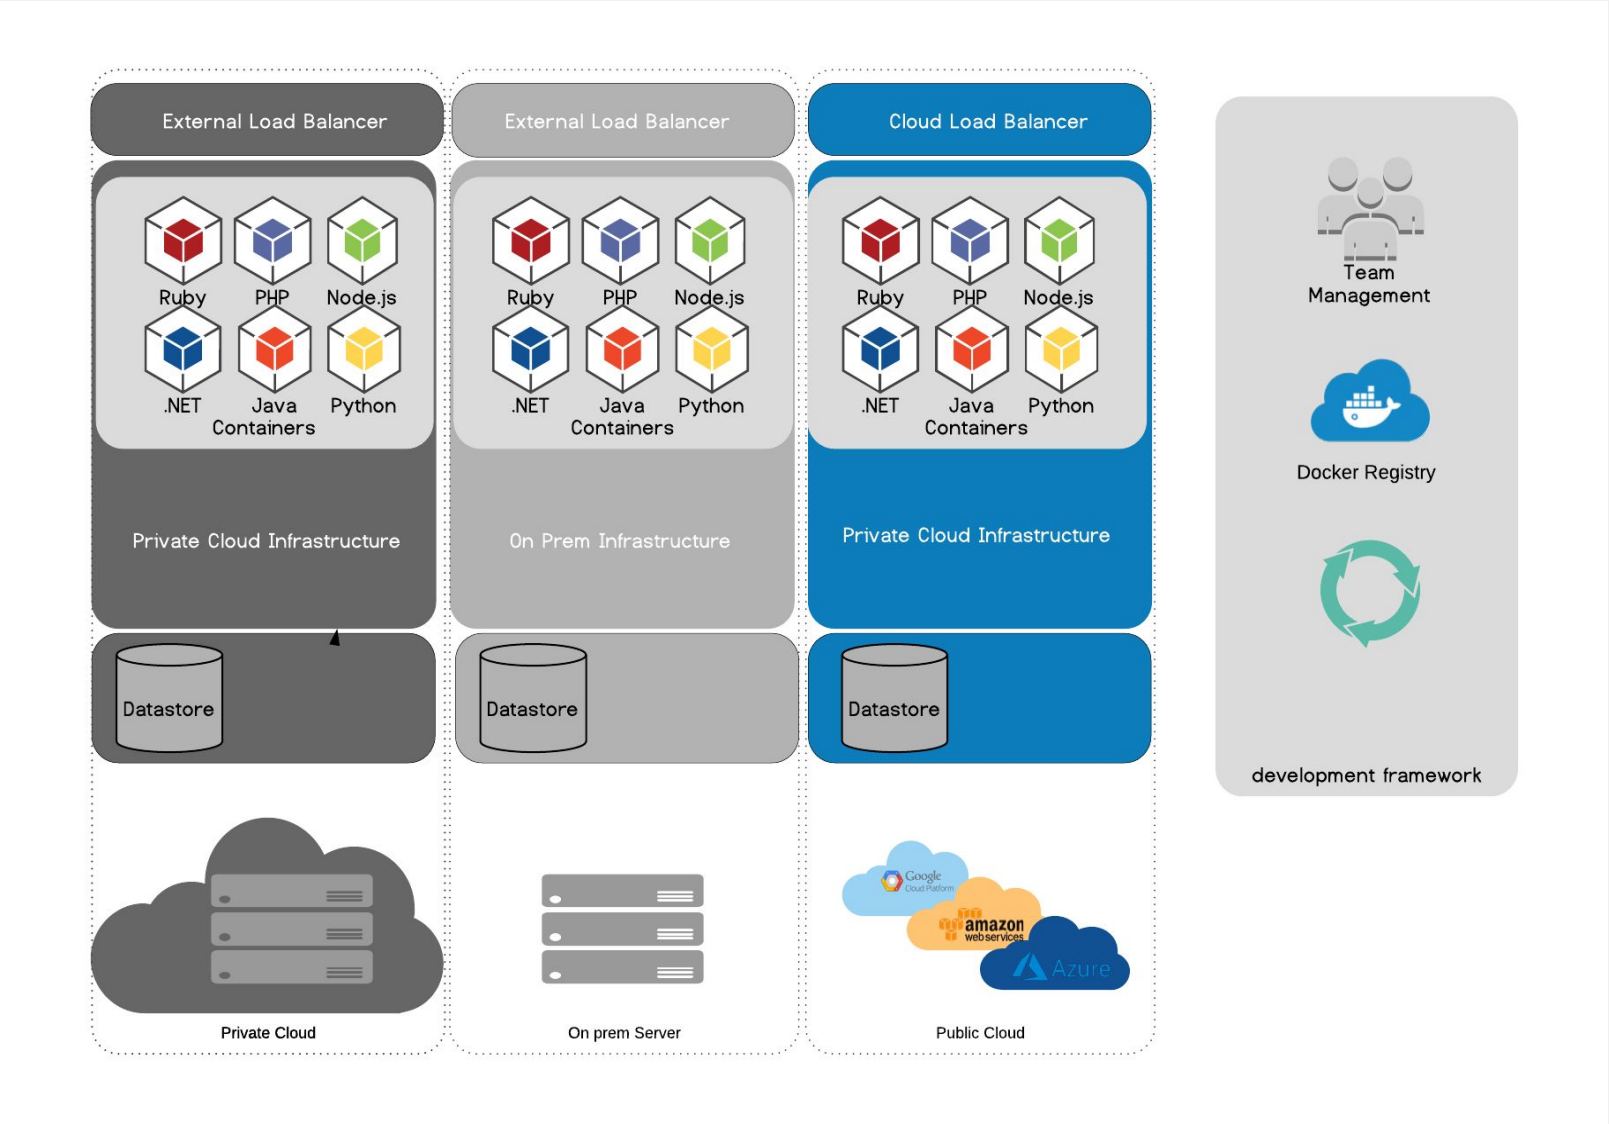

Microservices and Operations: new challenges

- **Microservices Need complex Infrastructure Setup**
- **Setup may change depending on the Infrastructure type**
- **Create or update Microservices may need a lot of effort in IT Operations**

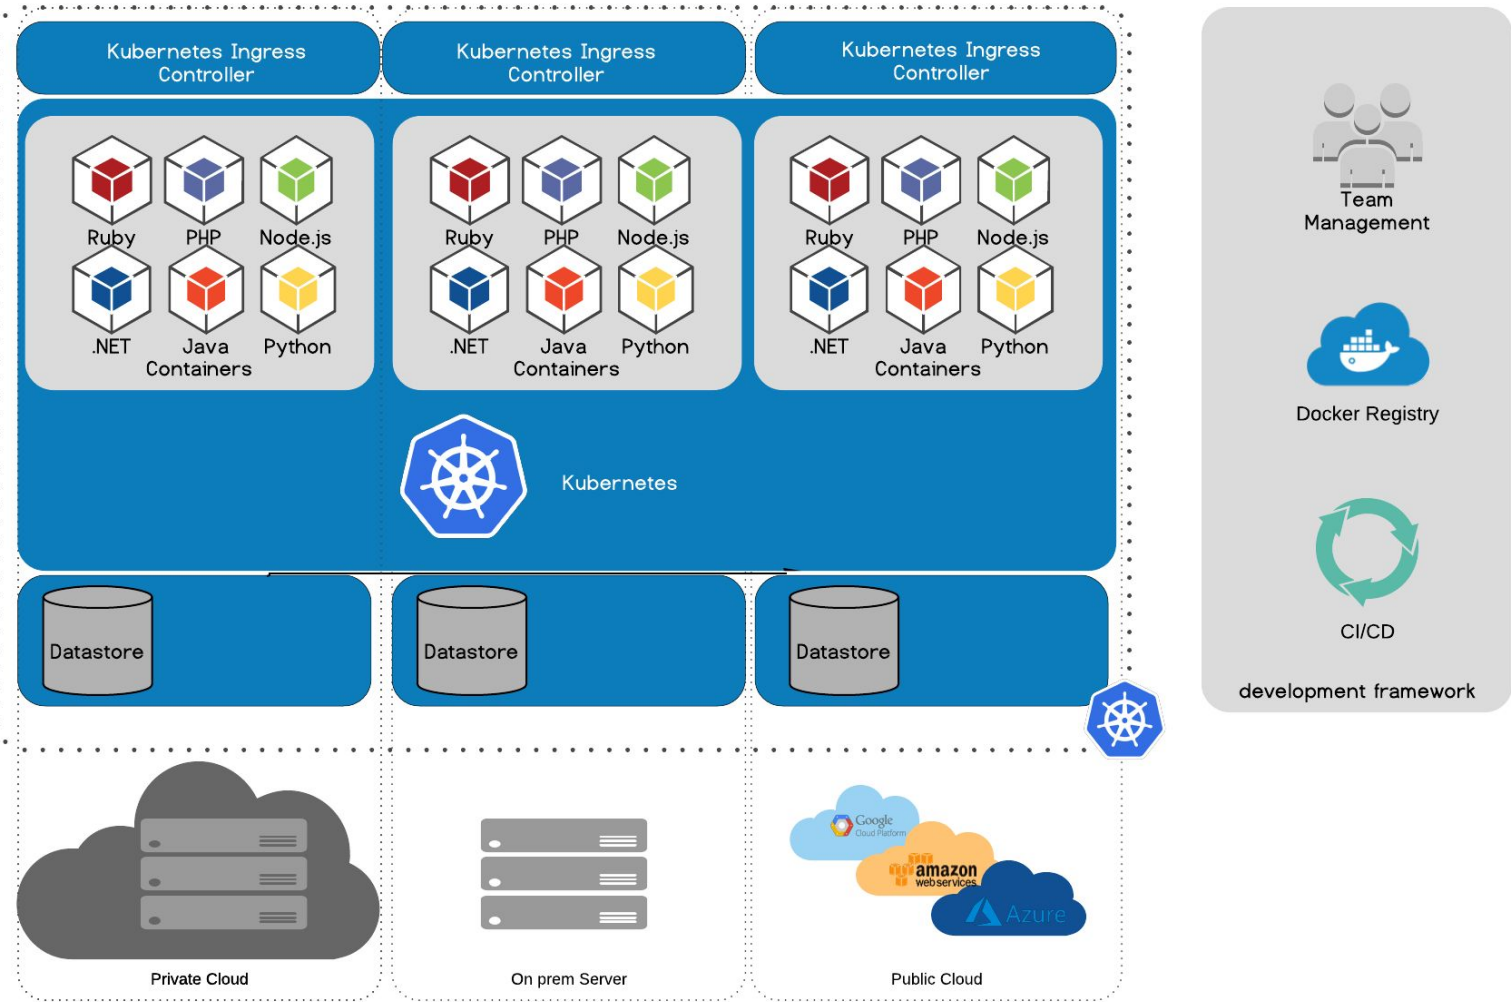

Different Platforms, different operations

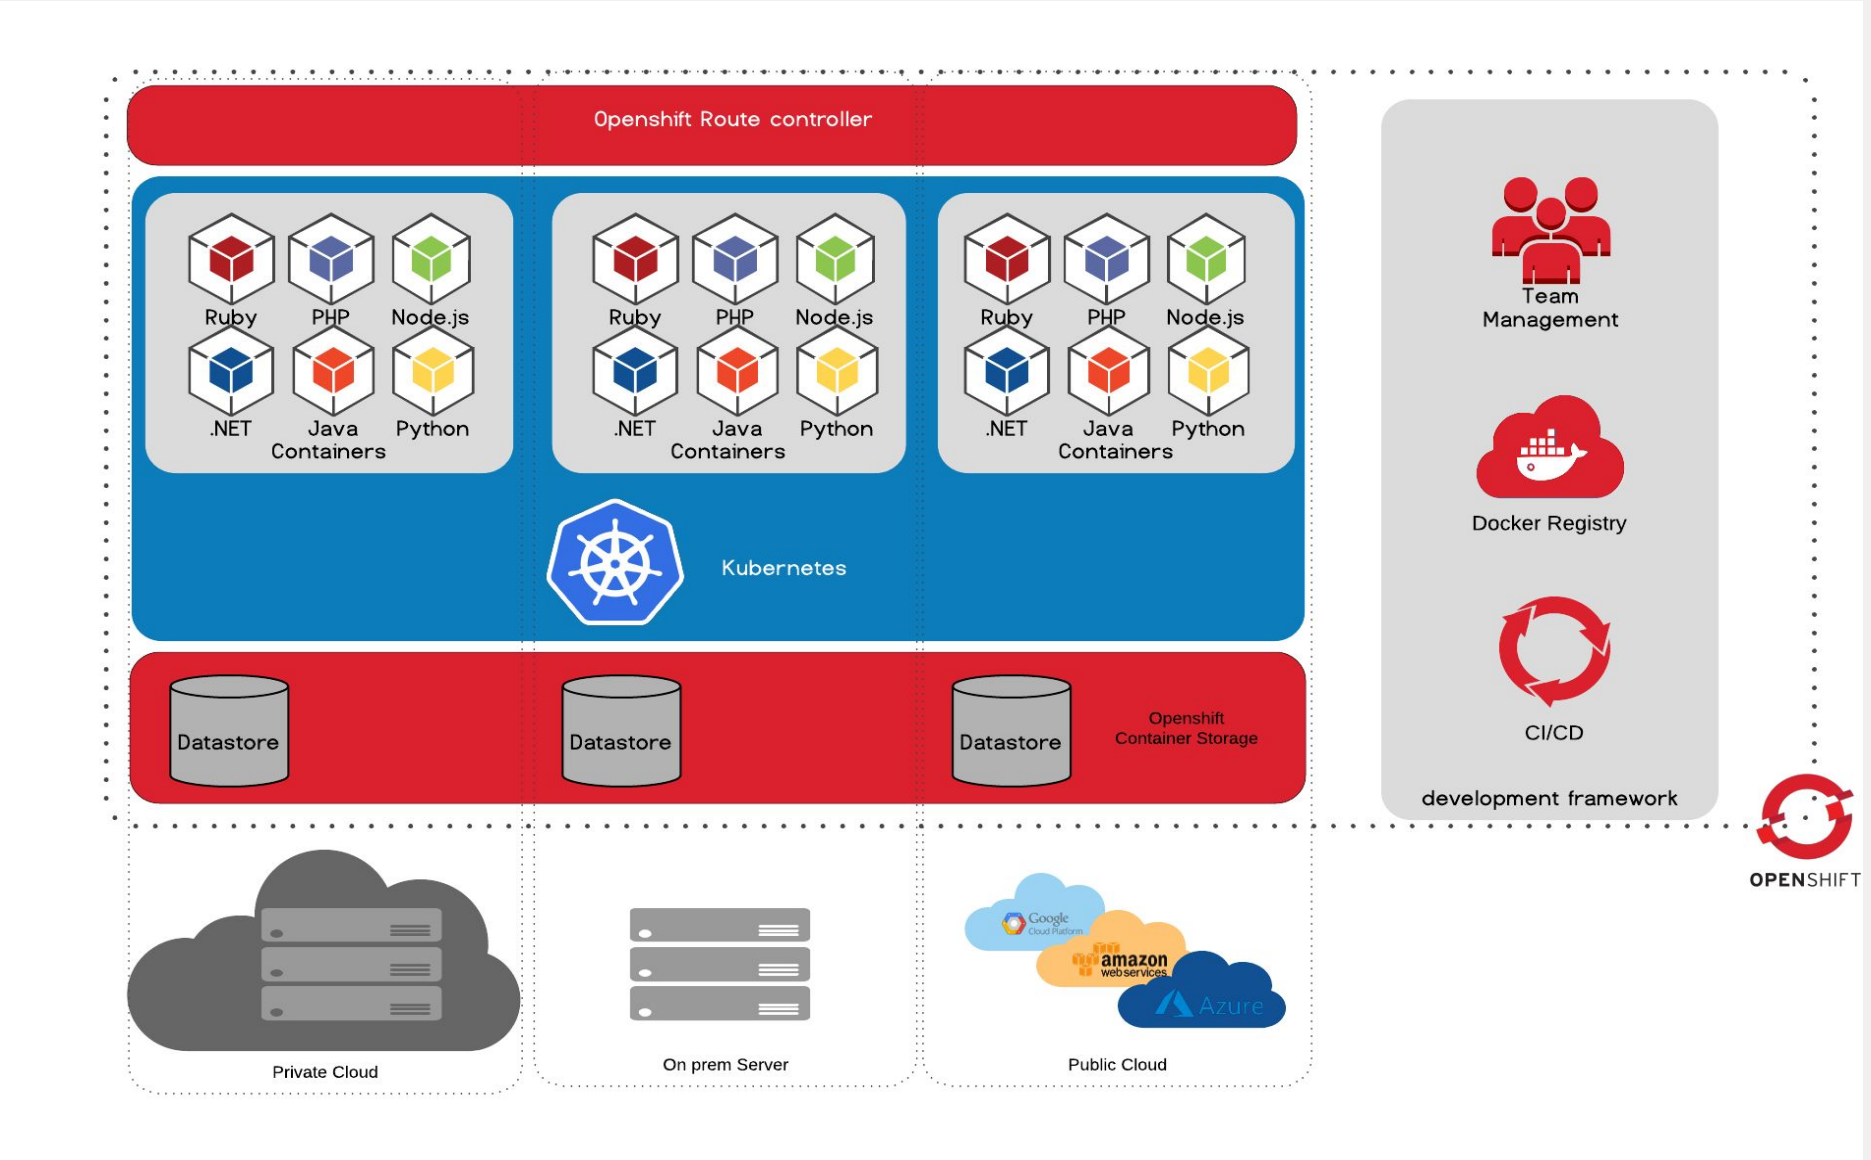

#RedHatOSD

Kubernetes abstracts operations on microservices

Complete software lifecycle management with OpenShift PaaS

 #RedHatOSD

3) Couchbase: The Data Platform For Containers

#RedHatOSD

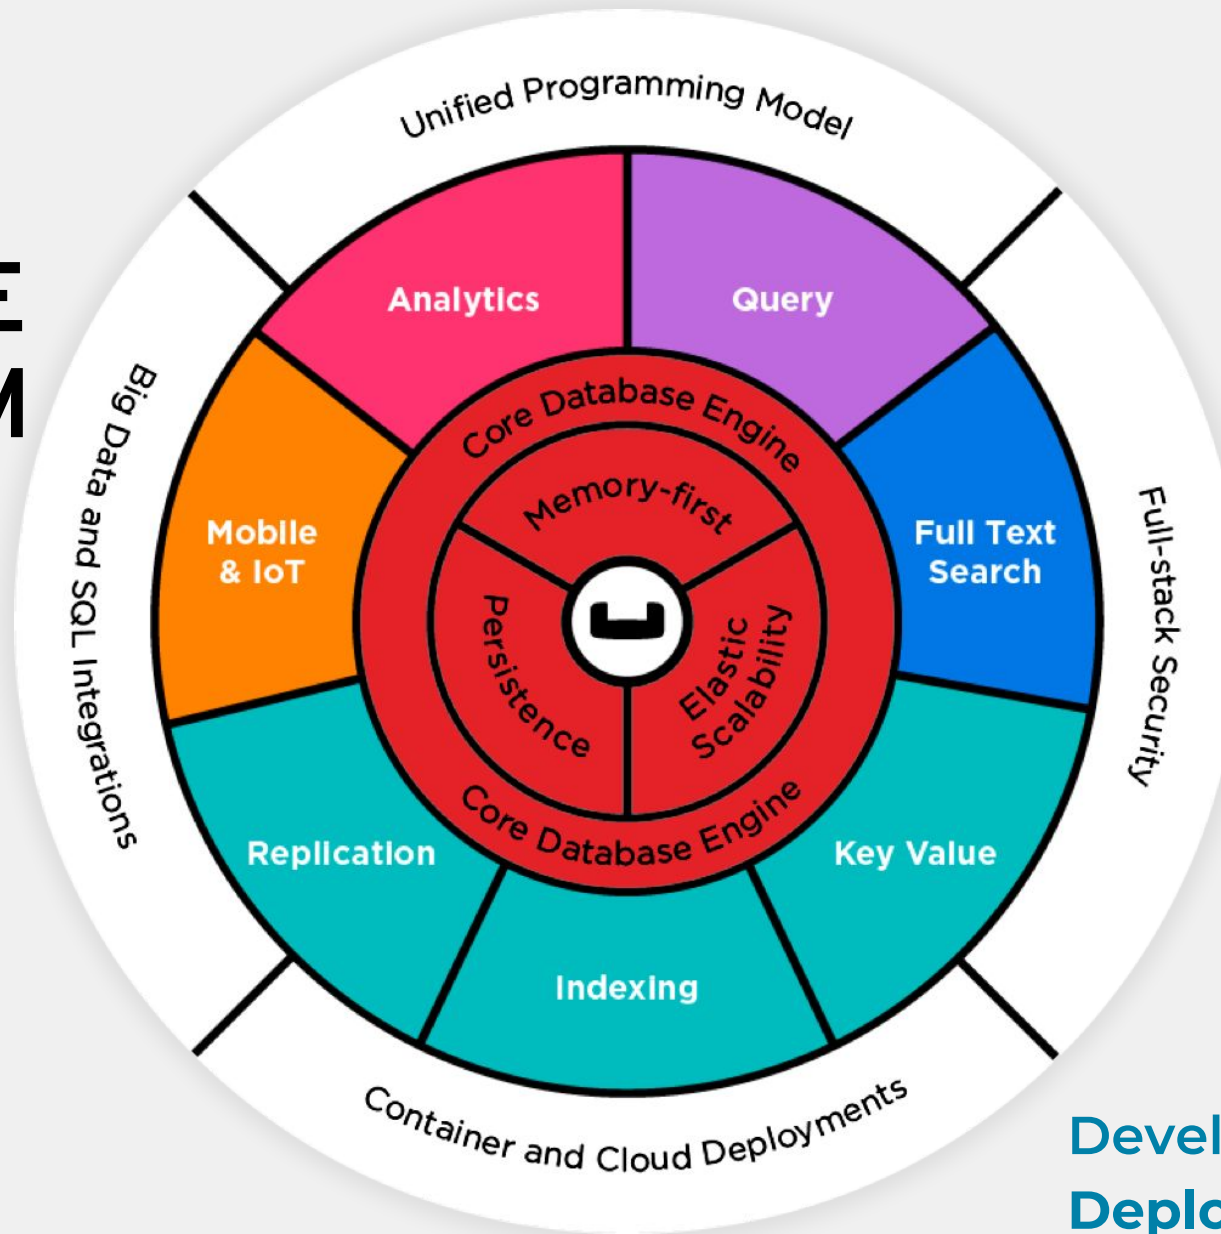

Why Not Databases in Containers?

3 major obstacles for DB containerisation:

1. How to shard data among containers?
2. How to avoid data corruption if multiple writes in different pods?
3. How to ensure high availability, backup policies, restore?

Only state is not enough!

THE COUCHBASE DATA PLATFORM

**Develop with agility.
Deploy at any scale.**

Couchbase designed for containerized applications

Microservice Architecture == Multi-Dimensional Scaling

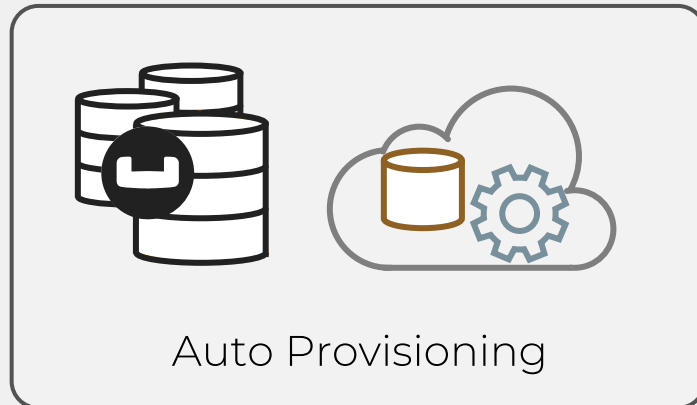

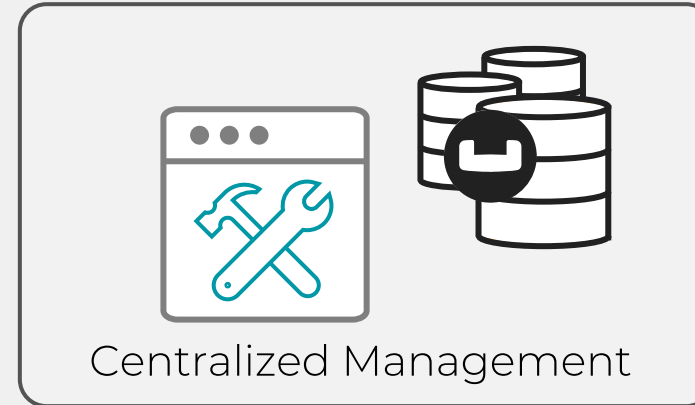

COUCHBASE SERVER CLUSTER

COUCHBASE SERVER CLUSTER

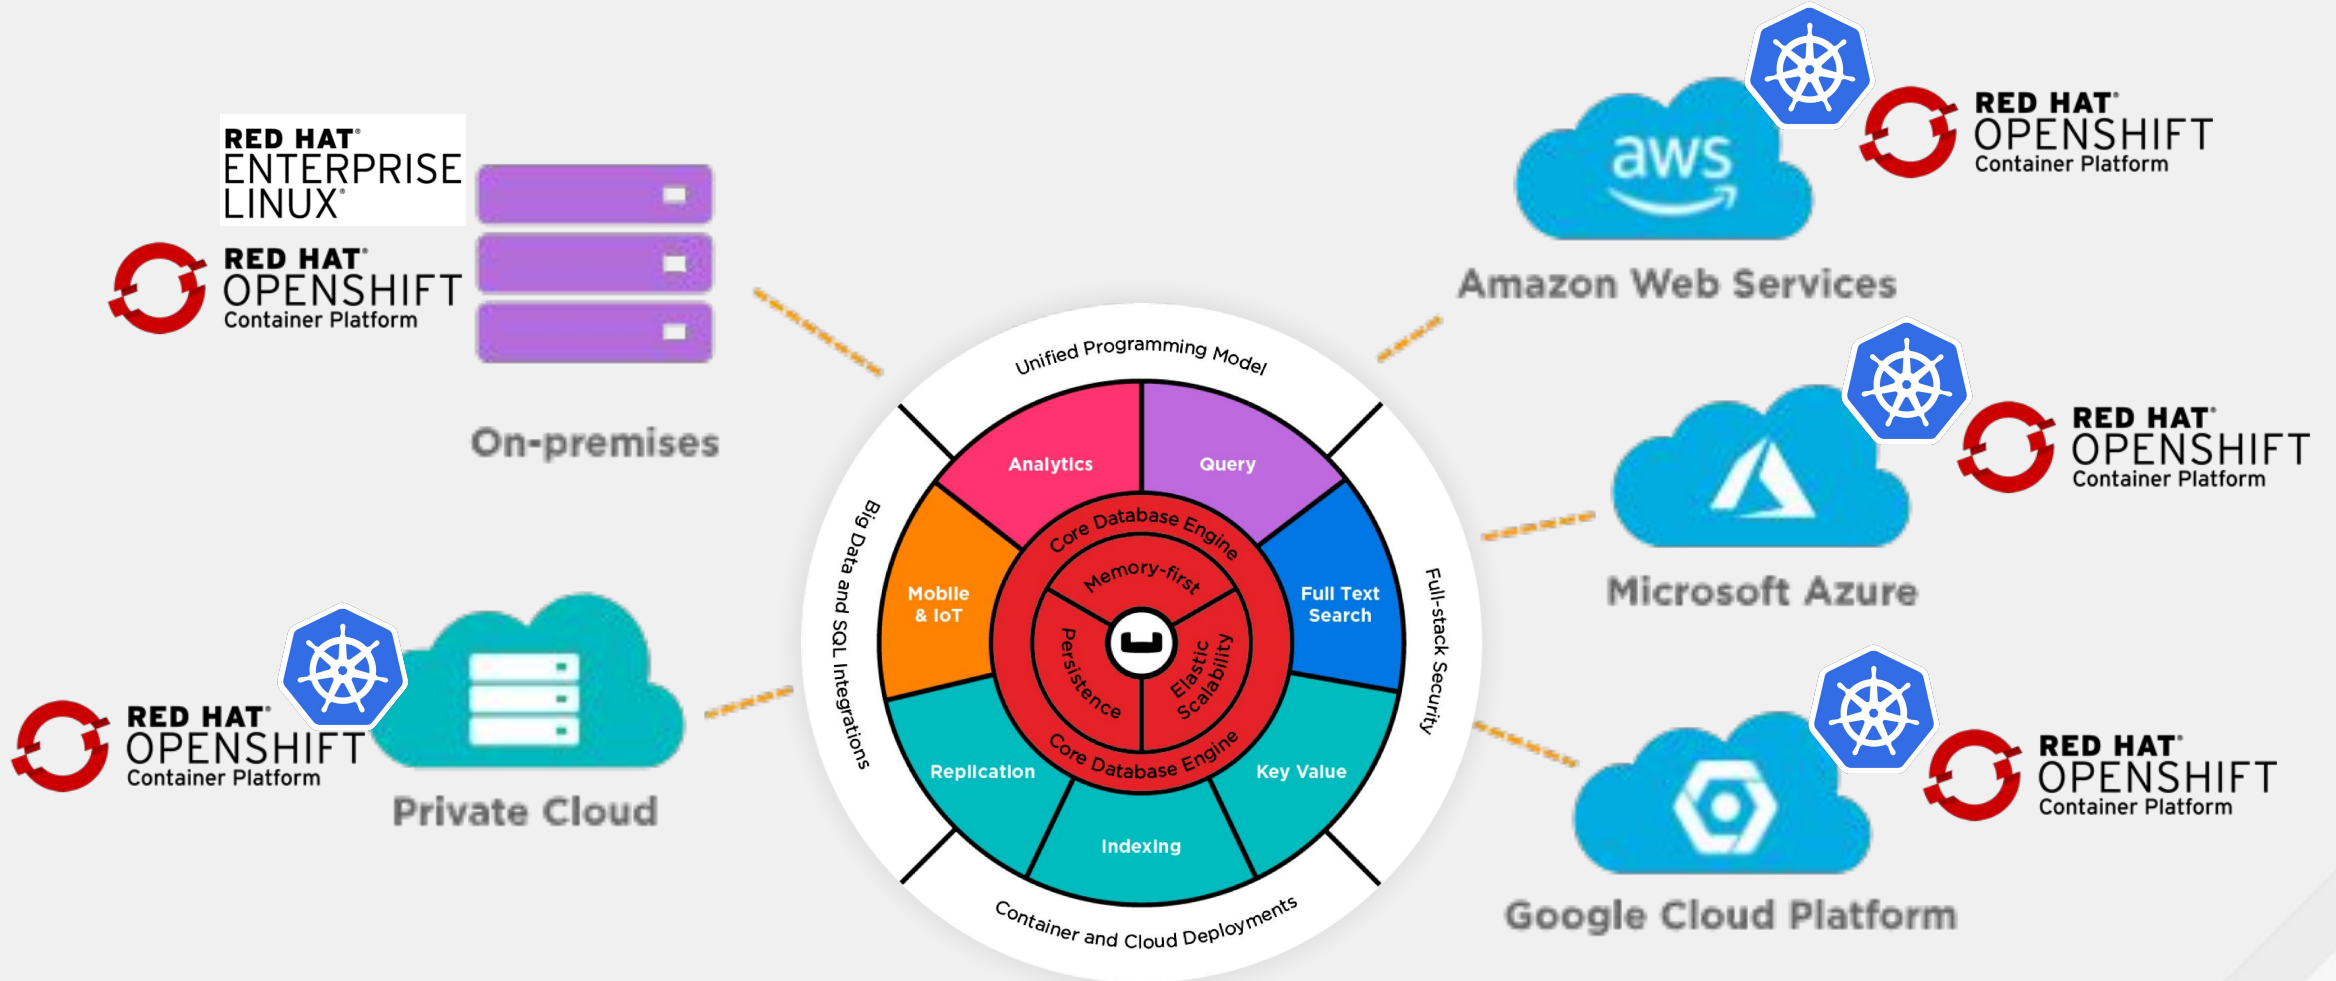

Couchbase Designed for Containerized Applications

#RedHatOSD

Couchbase and Red Hat enable hybrid/multi-cloud

Customers across every industry embracing digital

1 billion+ user profiles
7 DCs
740 nodes
300K reads,
20K writes/sec sustained

GANNETT

50M unique
monthly visitors
2.5B monthly page views
Replaced MongoDB

LinkedIn

2821 nodes,
100+ clusters
16M entries every 5 min
2.5 million ops/sec. on a
single cluster

1 billion+ documents
10TB+ data
Sub-200ms
response time

COUCHBASE AUTONOMOUS OPERATOR

#RedHatOSD

Introducing Couchbase Autonomous Operator

Couchbase Autonomous Operator is an **application-specific controller** that extends the Kubernetes API to create, **configure and manage instances of complex stateful applications** on behalf of a Kubernetes user.

It builds upon the basic Kubernetes resource and controller concepts, but also includes domain or application-specific knowledge to automate common tasks better managed by computers.

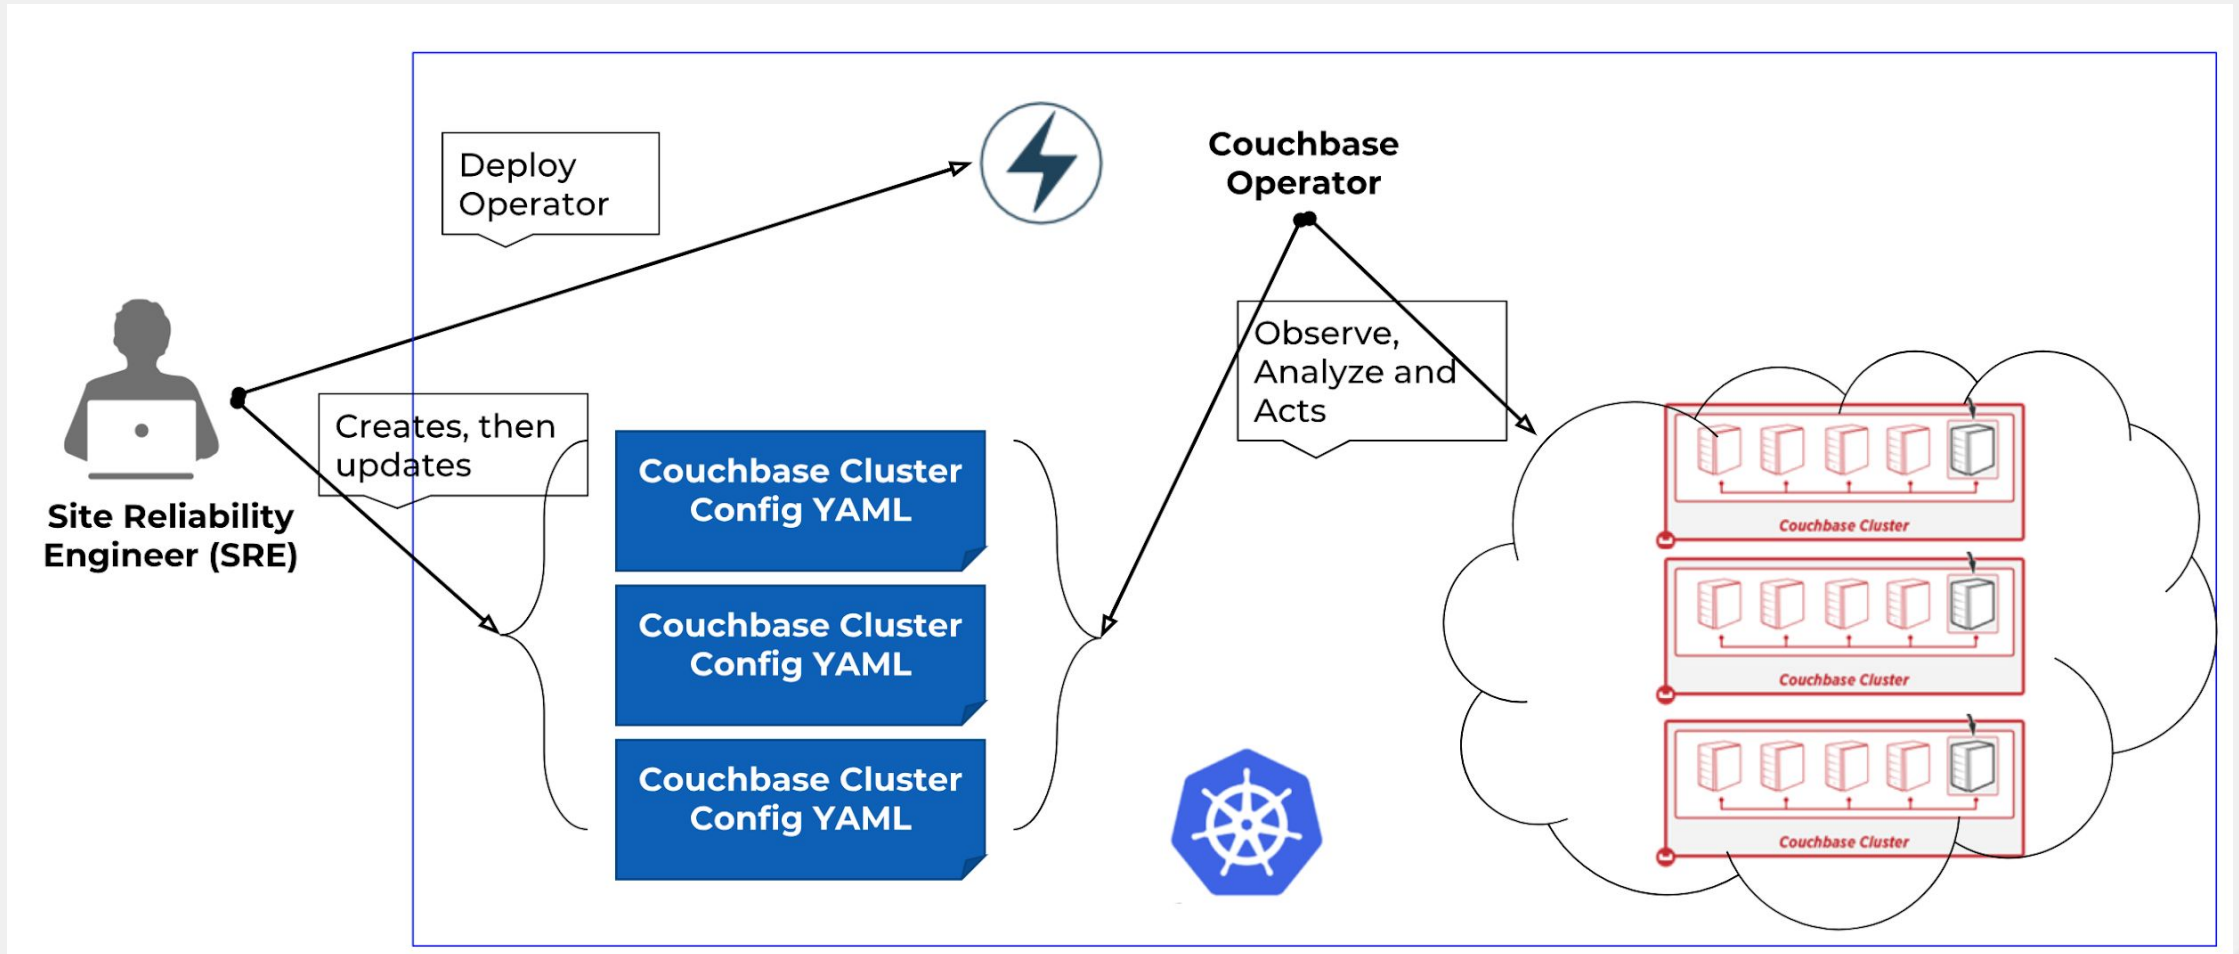

#RedHatOSD

Multi-Dimensional Scaling

```
14     indexStorageSetting: memory_optimized
15     autoFailoverTimeout: 30
16     buckets:
17     - name: couchbase-sample
18       type: couchbase
19       memoryQuota: 128
20       replicas: 3
21       ioPriority: high
22       evictionPolicy: fullEviction
23       conflictResolution: seqno
24       enableFlush: true
25       enableIndexReplica: false
26     servers:
27     - size: 2
28       name: data_and_index
29       services:
30       - data
31       - index
32       dataPath: /opt/couchbase/var/lib/couchbase/data
33       indexPath: /opt/couchbase/var/lib/couchbase/data
34     - size: 1
35       name: query_and_search
36       services:
37       - query
38       - search
39       dataPath: /opt/couchbase/var/lib/couchbase/data
40       indexPath: /opt/couchbase/var/lib/couchbase/data
```

Architecture

Key Benefits

- 1 Best way to Run and Manage Couchbase in Your Data Center – Up to 95% Reduction in Operational Overhead**
- 2 Automated Best Practices - Zero-Downtime Ops**
- 3 Elastic scaling - Push a button Dynamic Scaling**

#RedHatOSD

5) Use Case: Running a stateful MPI Application

#RedHatOSD

Use case

Microservices Architecture for the implementation of a pan-European Customer Portal to provide to Customers an easy way to see their own contractual information and to interact with back-end services as requested.
