Differences between B2C and B2B online paths to purchase

- Person / Personal life
- More time and energy
- **Emotive**, sometimes irrational purchase decisions
- Value an **immersive** multi-channel purchase **experience**.
- Motivations are often **aspirational**.

- Company / Job
- Less time and energy
- **Rational**, business-based decisions.
- Product **comparisons** based on features and **technical specifications**.
- Pricing often bound by **contracts**.
- Value is placed on simplicity, agility and **saving time**.

B2B digital commerce is different!

1

B2B buyers increasingly expect the same purchase experience as B2C

2

Bring these experiences into the B2B world

3

Purchases are usually bound by contract pricing, workflows and approvals

B2B Commerce Best practices

Key success factors when implementing B2B commerce

Facilitate catalog navigation

B2B product catalogs are complex and are difficult to navigate

1 Implement a platform technology that gives you **flexible control** to improve the way **products** are organised.

2 Rich search features will allow you to analyse the terms most used by customers to find your products

Rich Product Discovery

B2B buyers increasingly search online, without the help of sales reps

1 Provide **detailed** product information, related **content** and technical specifications.

2 Guide customer decision making with testimonials, cases, intelligent recommendations and personalized content.

3 Implement an e-commerce platform that includes a **customer feedback channel**, such as reviews, forums and feedback forms.

Leverage Customer Insights

**Bring together all
available data for
smarter ways to
merchandise**

1

Analyse purchase histories
to bundle products.

2

Test new product page
design to optimise
conversion.

3

Implement a platform that
has **flexible integration
standards**, so data can be
consolidated with ease.

Optimise B2B Purchasing

B2B purchasing is bound by contracts, pricing, workflows and approvals

1

Customer pricing, approvals and permissions should be managed in the background.

2

Customers should **only** see the products they can **purchase** at the contracted price point.

3

Ideally, your e-commerce platform can manage this complexity through **configuration**, rather than customisation.

Activate 24/7 self-service

One of the key benefits of digital commerce is being able to offer 24/7 self-service

1

Give buyers the option to log in **whenever** and **wherever they want** to.

2

Give all accounts access to the same product information, regardless of size.

3

Divert common questions away from sales through FAQs, product specifications and even chatbots.

4

Ensure the e-commerce platform has **key knowledge management capabilities** such as blogs and document libraries.

Make reordering easy

B2B buyers tend to repeat purchases and restock regularly

1

Offer **one-click** reordering or even subscriptions products to tie in regular business.

2

Ensure the digital commerce platform can support **subscription** products and easy reordering workflows

Support your sales reps

The direct sales channels is still important, especially for high value accounts

1

Give your sales team the **customer insights** they need relating to order histories, pending orders, buying patterns (dashboards)

2

Use data insights and machine learning to trigger **smart alerts** that the sales team can action.

3

Ensure the B2B commerce platform can **consolidate customer data** and insights for each sales representative.

Conclusions

1 Do not underestimate B2B complexity

2 Adopt a unified, single platform

3 Adopt a flexible platform easy to integrate with existing systems (Open Source)

4 Enhance account manager performance with a powerful new tool

Report: Innovation in B2B Digital Commerce: Trends and success strategies

In collaboration with
Liferay

Ignacio Cobisa
May 2019

Innovation in B2B Digital Commerce: Trends and strategies for success.

EXECUTIVE SUMMARY

In order to successfully carry out the digitalization process of organizations, it is necessary to implement actions across many dimensions, one of them being digital interactive experiences. E-commerce or digital commerce applications are undoubtedly one of the most impactful facilitators of these user experiences.

It is expected that digital commerce applications will grow in Europe at a Compound Annual Growth Rate (CAGR) of 8% until 2022. Within this market, it is expected that the B2B business will have higher growth levels than B2C until 2022. As a result, digital commerce application providers are under increasing pressure to provide their B2B clients with similar experiences to B2C, but always taking into account the specific requirements of business buyers, such as price and contract-specific discounts, differentiated operations based on user profiles or the integration and management of the product catalog and associated content.

The key points to successfully implement a B2B digital commerce platform can be summarized as follows:

- The Digital Commerce Platform should include a set of integrated layers such as the customer experience layer, the transactional layer, the payment platform or the back-office. These should all be based on a common infrastructure and be seamlessly integrated with peripheral functionalities, such as contract management, invoicing or analytics.
- Today's B2B audience expects a well-designed user interface that takes into consideration their interests to predict and provide products and services based on previous purchase experiences.
- A fundamental feature is the integration with legacy systems in organizations in order to provide frictionless experiences for users. All of this with the required security, which is a necessary and transversal requirement for the whole platform.
