Consolidating manageability using Ansible Tower

Our way forward

06/10/2017

Introduction

- Jeanou Smulders
- Owner @ Imagure
 - <https://www.imagure.nl>
 - info@imagure.nl
- 10+ years experience in various IT roles
- Hired by the City of Amsterdam
 - Solution Architect
 - Integration Specialist
 - Innovator
 - Designer
 - Ansible developer

Starting point

- Multiple solutions to automate
- Multiple teams doing their “thing”
- Long lead times

Drivers

The usual

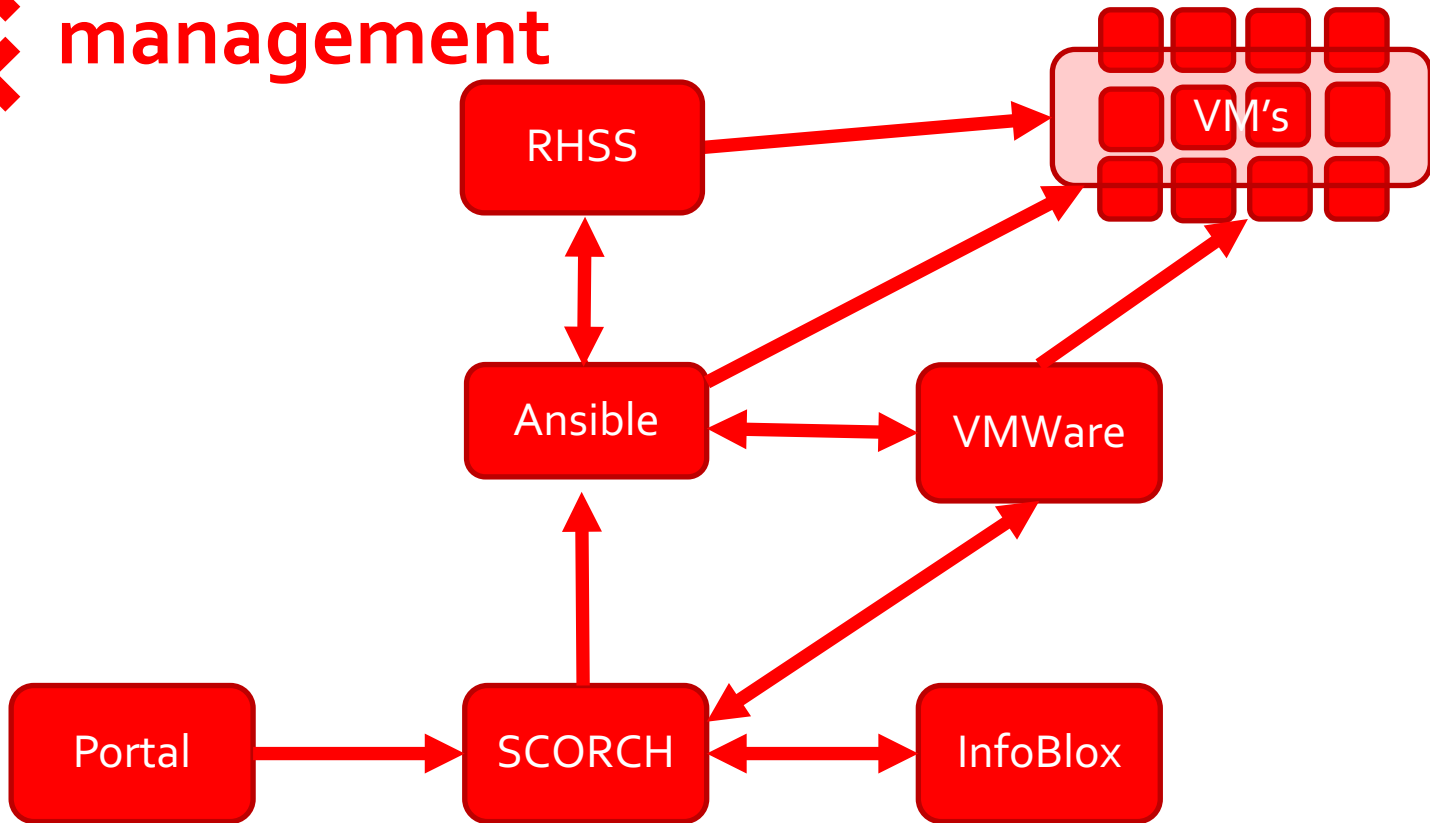

- Life Cycle Management on infrastructure components
 - Patch and Release management requirements
 - Cost reduction
 - Time to market
 - Able to accommodate new technologies
-
- Current automation space was a mess!

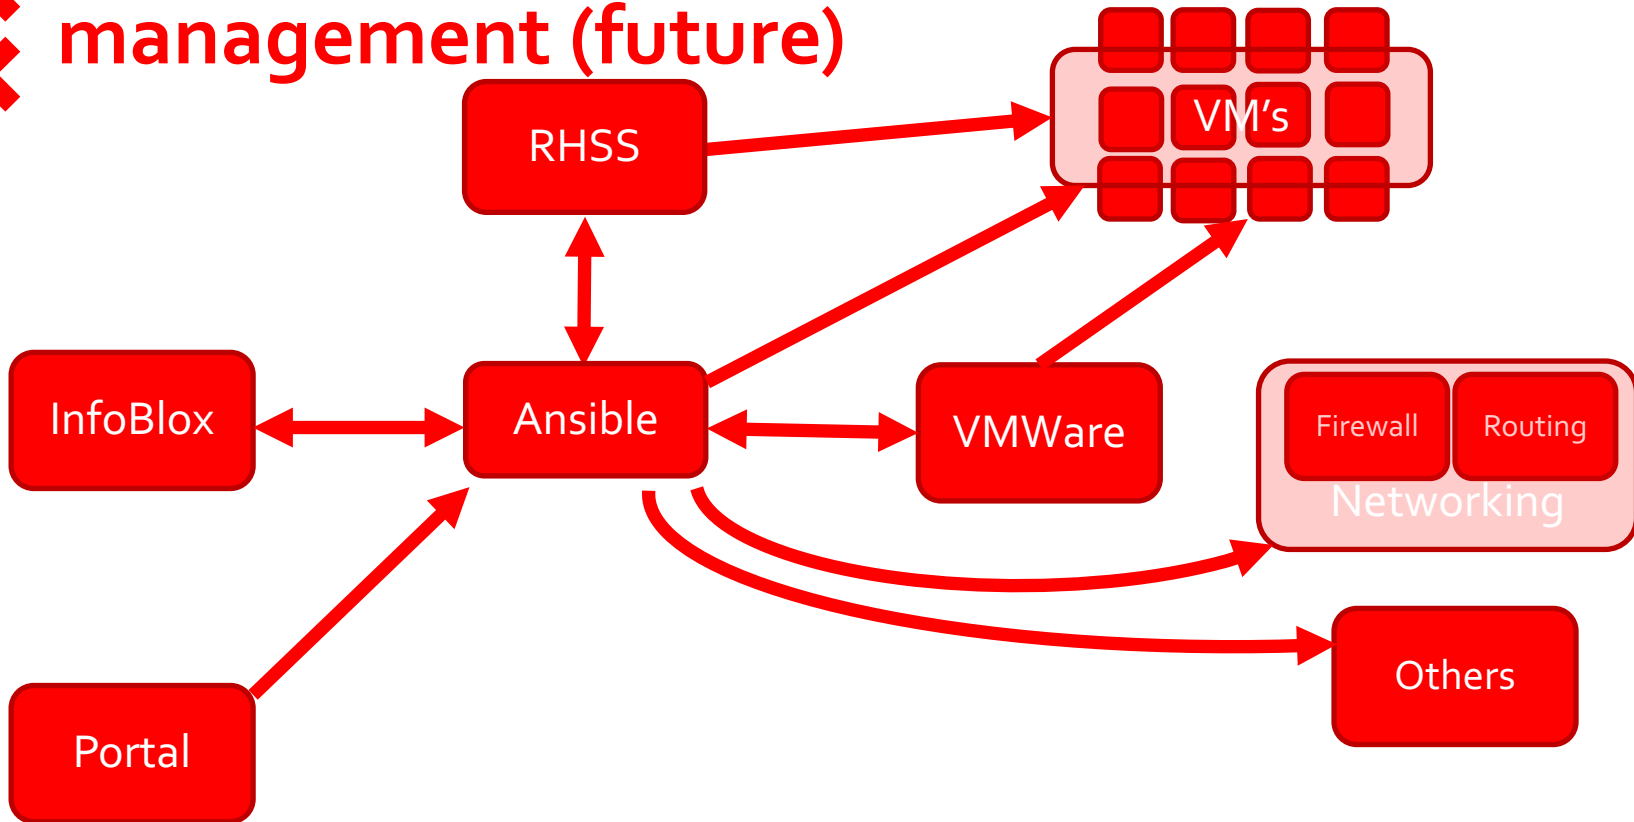

Main goals

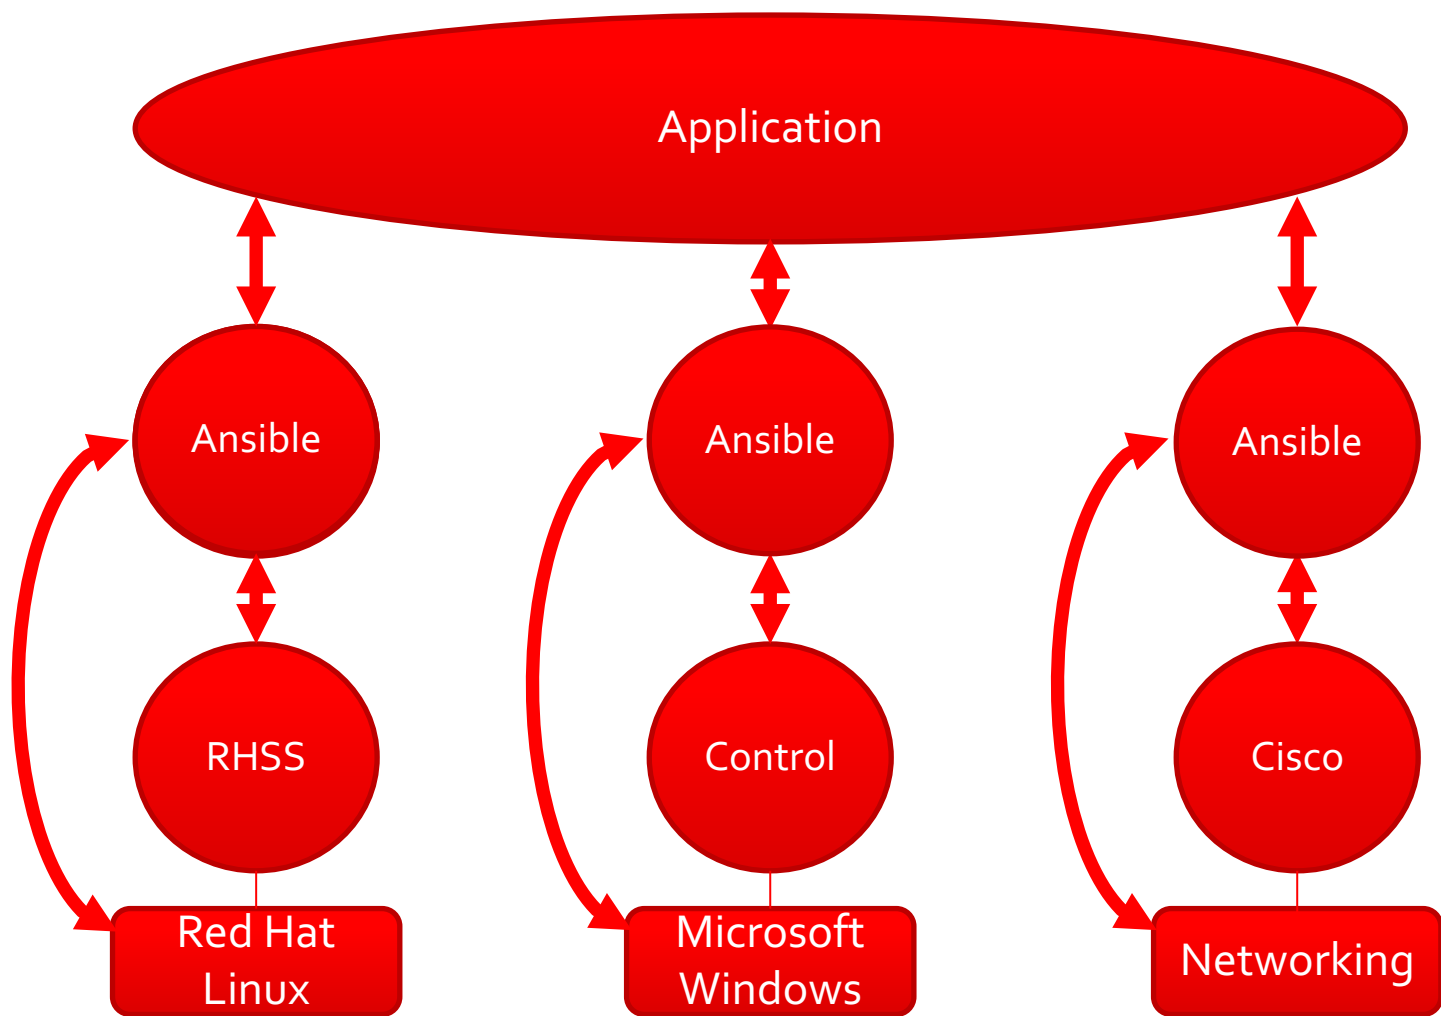

- Life Cycle Linux automation platform
- Facilitate Patch and Release management with tooling
- Introduce tooling to better accommodate capacity and continuity management

Linux infrastructure management

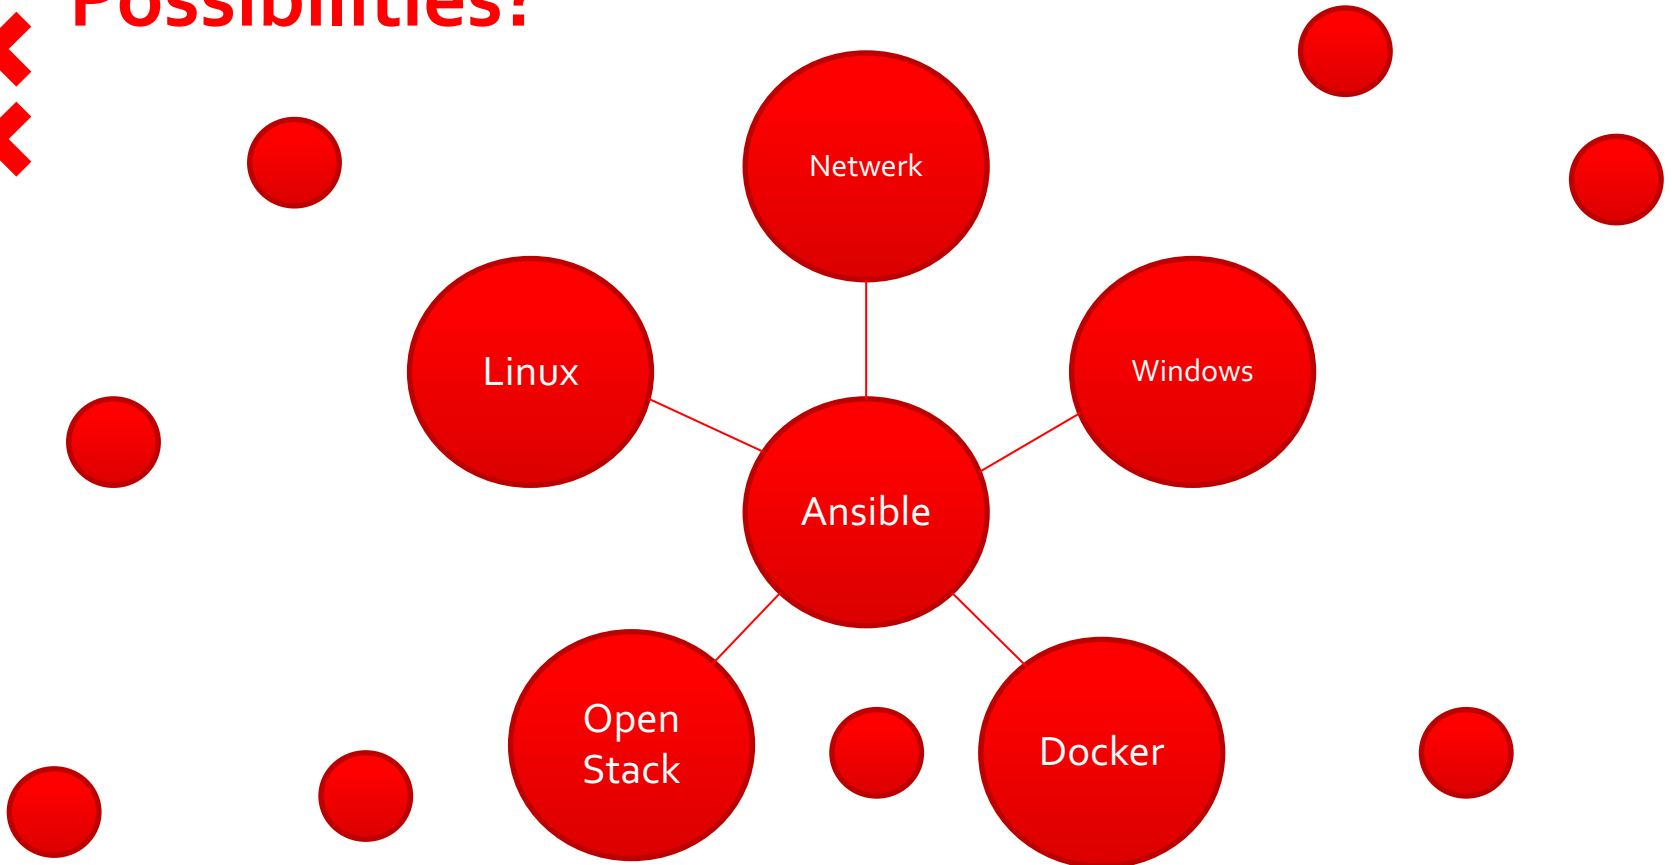

Linux infrastructure
management (future)

Possibilities?

Quick start

- Red Hat consultant 8 weeks on-site, to:
 - Educate employees
 - Design Ansible Tower and Red Hat Satellite Server
 - Configuration of Ansible Tower and Red Hat Satellite Server
 - Help migrate Puppet to Ansible Tower
 - Documentation

Value for business

- New features
- Faster changes
- Fewer errors

- More with less

- Coexistence Ops with Dev

What's next?

- Choices!
- Find support with other departments
- CI/CD possibilities
- Metering
- Integration with partners

Questions?

Thank you!
