Focus on making it to the finish line ...

Roadmap

- The evolving Cloud Native landscape
- Cloud-Native development Platform
- We want a consistent developer experience: now what?
- Live Showcase

The evolving Cloud Native landscape

New technologies emerged to enable innovation

And so much more. In fact, there's so much choice...

75%

**of enterprise users identify complexity
of implementation and operations as
the top blocker to adoption**

Many public Kubernetes failures

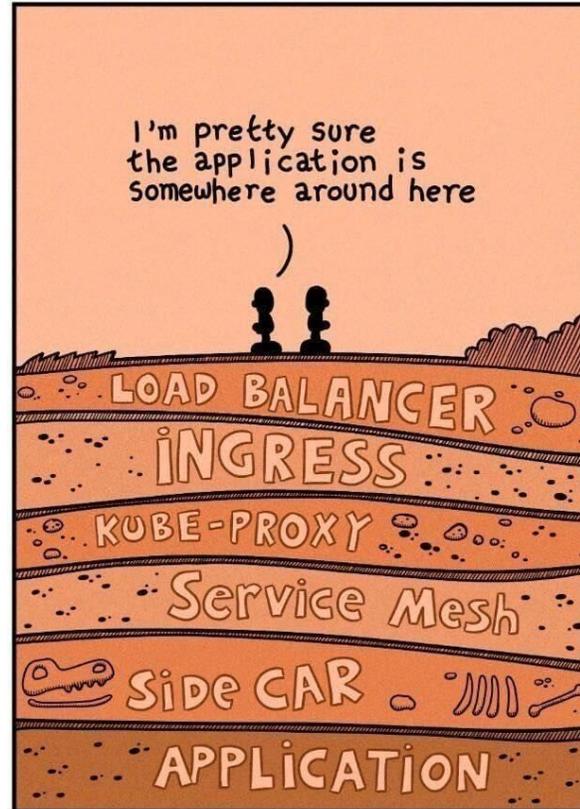

Kubernetes Failure Stories

A compiled list of links to public failure stories related to Kubernetes. Most recent publications on top.

- [10 More Weird Ways to Blow Up Your Kubernetes - Airbnb - KubeCon NA 2020](#)
 - involved: MutatingAdmissionWebhook, CPU Limits, OOMKill, kube2iam, HPA
 - impact: outages
- [Why we switched from fluent-bit to Fluentd in 2 hours - PrometheusKube - blog post 2020](#)
 - involved: fluent-bit, missing logs, Fluentd
 - impact: lost application logs in production
- [Make your services faster by removing CPU limits - Buffer - blog post 2020](#)
 - involved: kops, CPU Limit, CPU throttling
 - impact: high latency
- [The case of the missing packet: An EKS migration tale - MindTickle - blog post 2020](#)
 - involved: EKS, AWS CNI Plugin,
 - impact: frequent connection failures when talking to services outside the cluster

Day 2 operations of Kubernetes is hard

Cloud-Native Development Platform

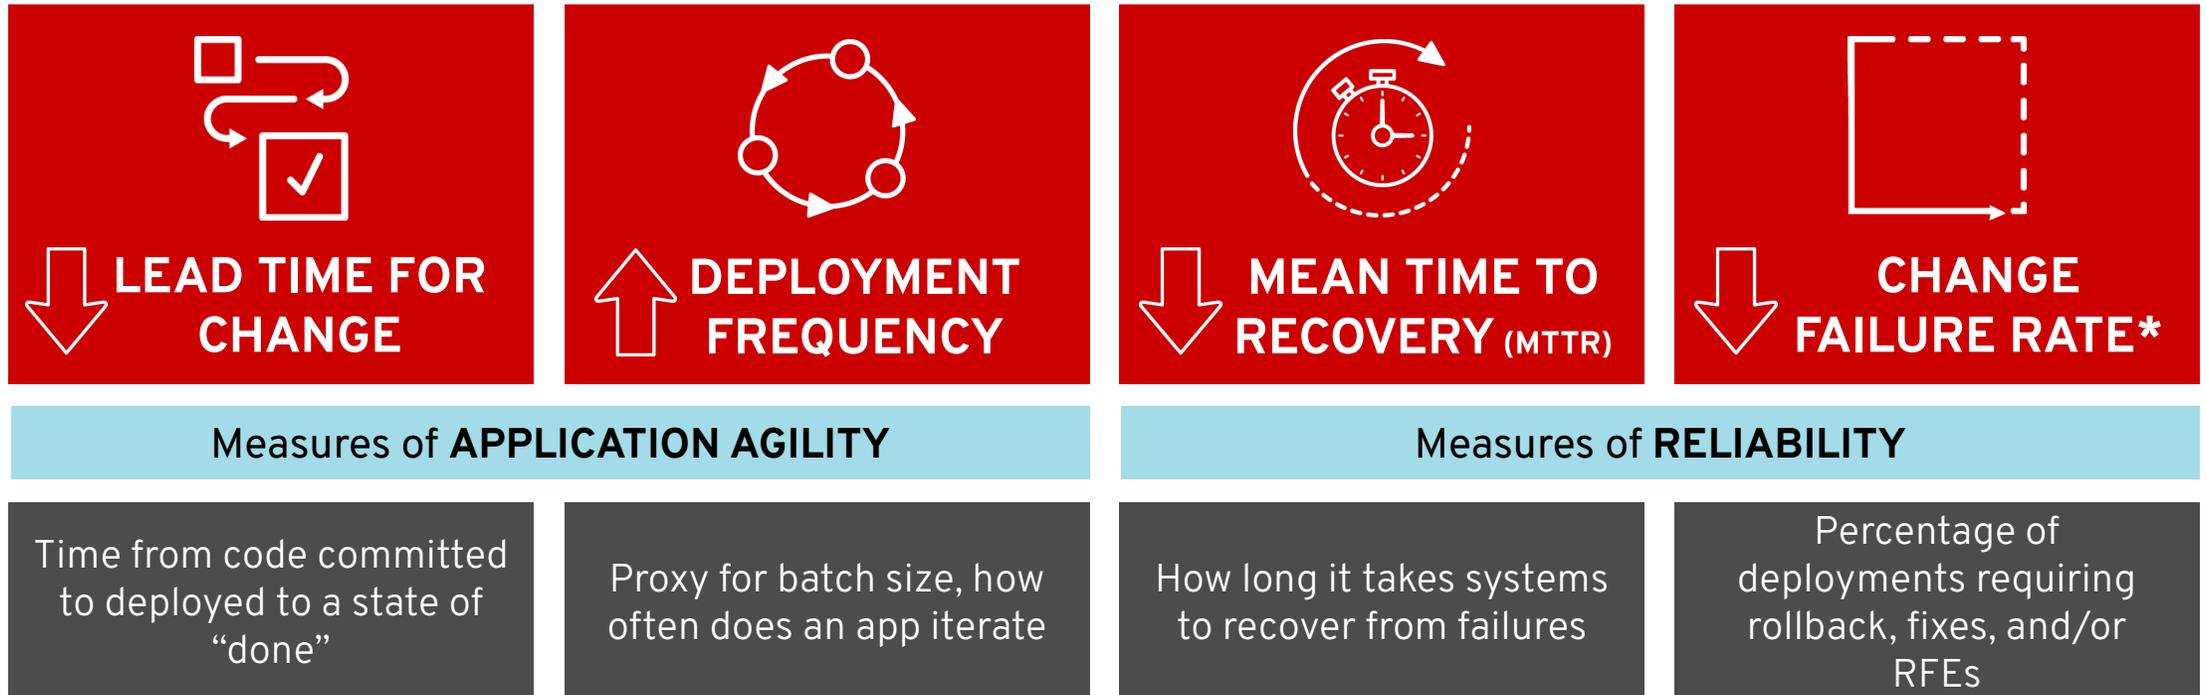

What is an Application Platform?

And what do you mean by “no more 2am pager alerts”?

- ▶ An Application Platform focuses on enabling... well, applications!
- ▶ Similar to the cloud, an Application Platform's goal is to enable innovation and reduce the time spent on maintenance and lifecycle management
- ▶ Your business value comes from building and running applications, not on being an expert in running clusters somewhere

Unlock the power of technologies like containers and Kubernetes, while hiding the complexity of these technologies.

Top Level Metrics of Success from an Application Platform

Red Hat OpenShift: A single platform for application innovation

Empowering developers to innovate

Get applications to production sooner with a wide range of technologies and streamlined workflows

A cloud-like experience, everywhere

Full-stack and automated operations on a consistent foundation for on-premises or hybrid cloud infrastructures

Trusted enterprise Kubernetes

Continuous security, world-class support and services, and deep expertise to confidently run any application

OpenShift is a turnkey application platform

Integrated tools and services powering your team for faster application development and delivery

Red Hat OpenShift Service Mesh with Istio to connect, secure, and observe services

Red Hat OpenShift Serverless with Knative to provide hybrid serverless, FaaS, & event-driven architectures

Red Hat OpenShift pipelines with Tekton to provide Kubernetes-native CI/CD pipelines

Red Hat OpenShift GitOps with ArgoCD to provide declarative GitOps based continuous delivery

Red Hat OpenShift builds with Shipwright to build images from code using S2I + other & integrate with Github actions

Red Hat Runtimes, including Spring Boot, Quarkus, OpenJDK, JBoss SSO, node.js, Apache Tomcat, Apache HTTP, and .NET

Red Hat OpenShift developer console & CLI enhancements to improve dev experience

Red Hat OpenShift Dev Spaces with Eclipse Che for cloud-native development & collaboration

Red Hat OpenShift IDE plugin integrations to meet the developer where they are

OpenShift developer sandbox and local cluster enhancements to improve access

Application level observability for developers to build and manage their apps

Red Hat OpenShift API Management, with first 100k API calls per day free for ROSA/OSDonAWS with full production support

Kubernetes cluster services

Kubernetes (orchestration)

Linux (container host operating system)

An introduction to Dev Spaces

The screenshot shows the GitHub interface for the repository 'quarkusio / todo-demo-app'. The 'Dev Spaces' button is highlighted, and its dropdown menu is open, showing options: 'Open with dev.acme.com' (marked as Default), 'Open with workspaces.openshift.com', and 'Configure'. Below the menu, a table of files is visible:

| File Name | Description | Last Commit |
|---------------|--|--------------|
| src | Fixes to pass tests on sandbox | 3 months ago |
| .devfile.yaml | Devfile name update | 3 months ago |
| .dockerignore | initial commit of the master branch (H2) | 4 years ago |
| .gitignore | feat: defines ignore rules for IDEs | 3 years ago |
| LICENSE | Initial commit | 4 years ago |
| README.md | Update to quarkus 1.11.3.Final | 2 years ago |
| pom.xml | update to q3, postgres devservice and che kubedock | 3 months ago |

At the bottom of the screenshot, a red banner contains the text: 'TODO Application with Quarkus' and a URL: 'https://dev.acme.com/?url=https://github.com/quarkusio/todo-demo-app'.

We want a consistent developer
experience: now what?

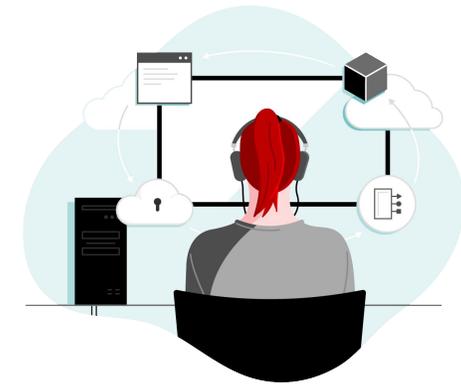

Technical expertise

ROSA Working Group
Weekly cadence

Technical expertise
Black Belts
Technical Account Manager

24x7x365 Support
Support Cases
SRE Team

What ROSA can bring to...

A Developer

A Product Owner

An Operations Team

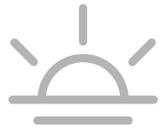

Key personas

Developer

- ▶ *Use the technical requirements from the technical lead to create cost and timeline estimates*
- ▶ *Build the deliverables and communicate the status to the technical lead*
- ▶ *Stay up to date with new technologies on the market and assess them prior to implementation to ensure compatibility*

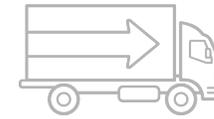

What is achieved

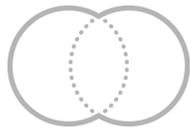

Early delivery of software

Expect change

Always be shipping

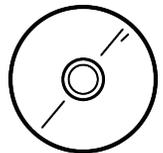

Business and developer sides always working together

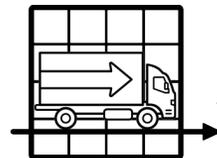

Team up motivated people and trust them

Face to face communication above all others

Working software, not SLOC, is success

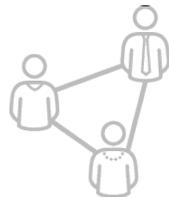

A constant pace forever

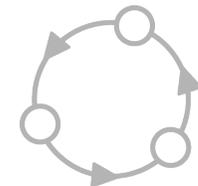

Quality by default, always

KISS

Self organizing teams

Constant reflection and action

Key personas

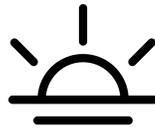

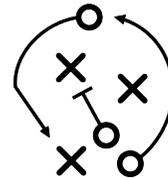

Product Owner

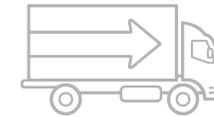

- ▶ *Manage and prioritise the product backlog*
- ▶ *Collaborate closely with cross-functional teams to ensure the product meets customer needs, timely and within budget*
- ▶ *Ensure that the product is compliant with all relevant regulations and standards*

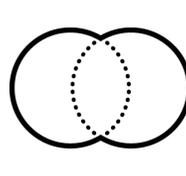

What is achieved

 Early delivery of software

 Expect change

 Always be shipping

 Business and developer sides always working together

 Team up motivated people and trust them

 Face to face communication above all others

 Working software, not SLOC, is success

 A constant pace forever

 Quality by default, always

 KISS

 Self organizing teams

 Constant reflection and action

Key personas

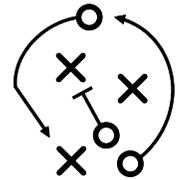

Operations Team member

- ▶ *Ensure that the organisation delivers the right product to the right customers on time*
- ▶ *Ensure organisation leads keep the budget in consideration when making important decisions*
- ▶ *Keep systems up and available, and enable the organisation to use technology to innovate*

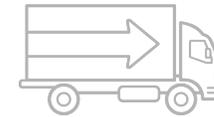

What is achieved

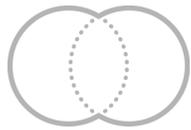

Early delivery of software

Expect change

Always be shipping

Business and developer sides always working together

Team up motivated people and trust them

Face to face communication above all others

Working software, not SLOC, is success

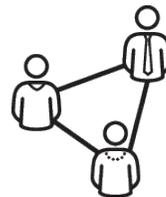

A constant pace forever

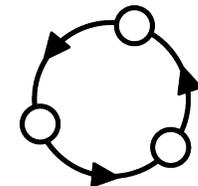

Quality by default, always

KISS

Self organizing teams

Constant reflection and action
