# Combining to solve cloud-native challenges

**Achieve** better business outcomes

**Manage** microservice and cloud complexity at enterprise scale

**Automate** IT operations intelligently with causal AI and precise insights

**Exceed** DevOps and SRE service objectives with one tightly integrated solution

# What is Auto-remediation?

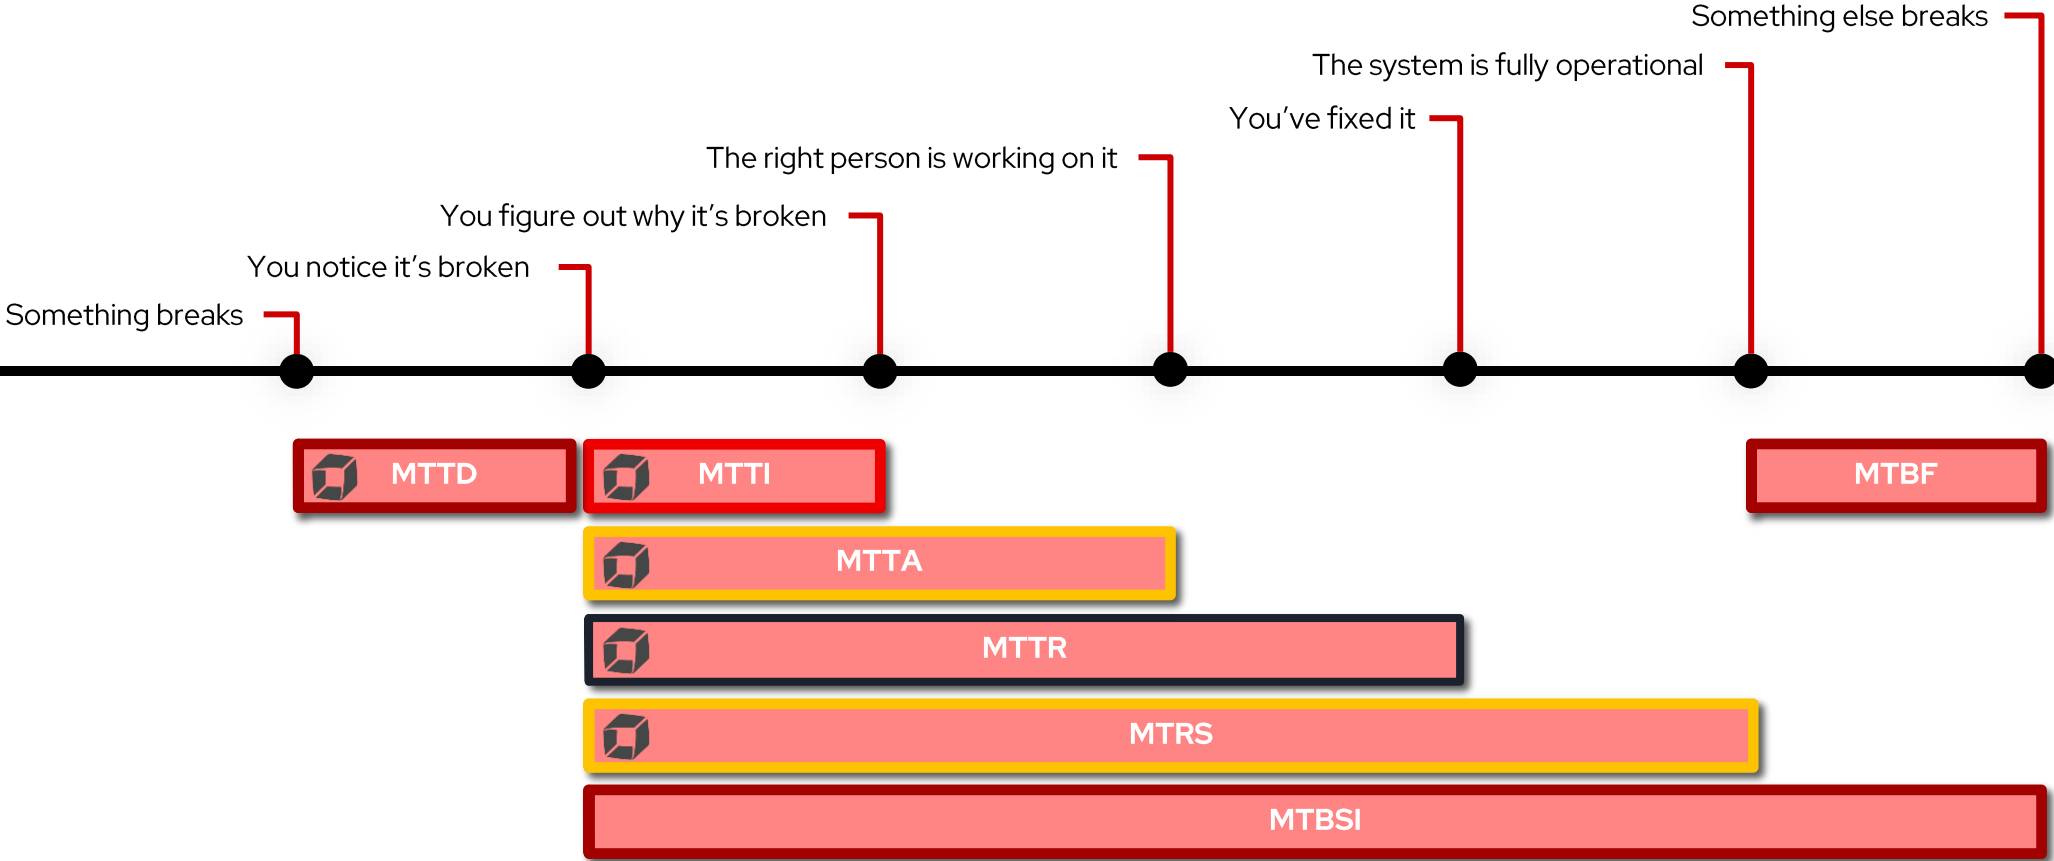

**Auto-remediation**, or **self-healing**, is a workflow that triggers and responds to alerts or events by executing actions that can prevent or fix an issue.

Auto-remediation significantly **reduces MTTR**.

Types:

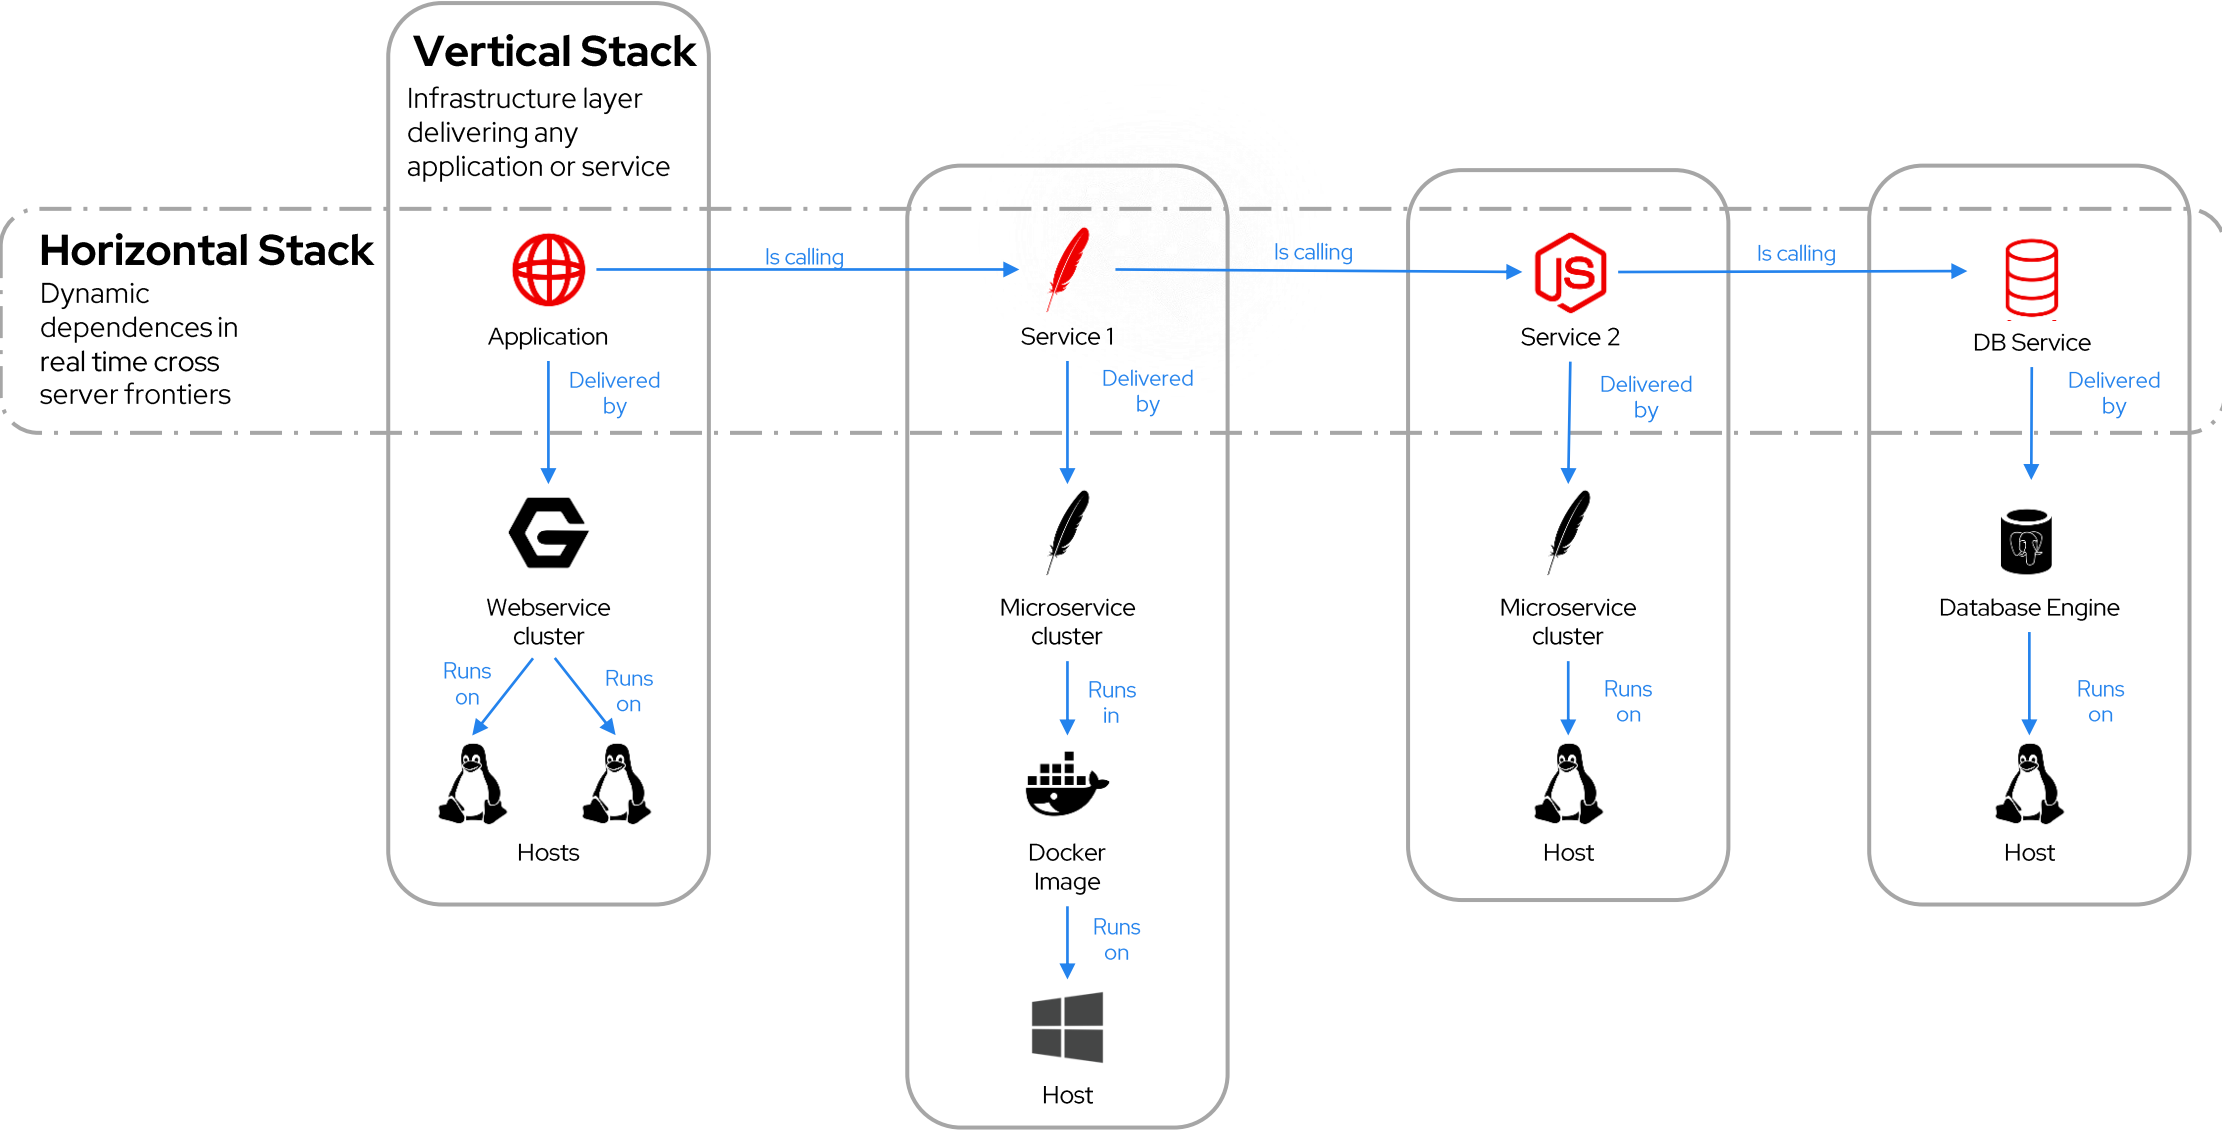

1. Automated remediation of a **known problem** or **frequent issue (proactive)**
2. Automated rollback of a **problematic change (reactive)**

# The timeline of an incident

MMTD: Mean Time to Detect MTTI: Mean Time to Investigate MTTA: Mean Time to Action MTTR: Mean Time to Repair MTRS: Mean Time to Restore Service MTBF: Mean Time Between Failures MTBSI: Mean Time Between Service Incidents

# The Diagnostics of the unknowns

# GO BEYOND DASHBOARDS AND GET PROACTIVE ANSWERS

Dynatrace continuously observes, learns and auto-adapts to changes in real-time to detect problems automatically (even the ones you never thought of.)

“ Dynatrace’s AI-driven answers are helping the business to remediate problems quicker, meaning we’re able to spend more time innovating and less time solving problems.”

– Anish Patel, Principal Systems Engineer CENGAGE

Automated problem detection

Precise root cause explained

Prioritized by business impact

Causal AI vs correlation

No alert storms

Trigger self-healing

The screenshot shows the Dynatrace interface for a specific problem. At the top, it identifies the problem as 'www.easytravel.com: User action duration degradation' detected at 02:03 - 02:29. It provides summary statistics: 1 affected application, 10 affected services, and 2 affected infrastructures. A 'Business impact analysis' section shows 276 impacted users and 4.33 million affected service calls. The 'Root cause' section identifies 'CheckDestination' as the issue, with a deployment change and response time degradations. A 'Visual resolution path' is also visible at the bottom right.

Same problems seem to repeat themselves

# AUTOMATE YOUR PROBLEM REMEDIATION

Dynatrace automatically eliminates the noise and provides the precise, reliable root cause which is essential for self-healing, autonomous operations.

Problems Problem 694

www.easytravel.com: User action duration degradation  
Problem 694 detected at 02:03 - 02:29 (was open for 26 minutes). This problem affects real users.

Affected applications 1 Affected services 10 Affected infrastructure 2

DAVIS™  
analyzed 2,942,317,092 dependencies

**Business impact analysis**  
An analysis of all affected service calls and impacted real users during the first 36 minutes of the problem shows the following potential impact.

276 Impacted users (show first 100) 4.33mil Affected service calls  
Show more

1 impacted application  
73.6 User actions per minute impacted

www.easytravel.com  
Web application

User action duration degradation  
The current response time (4.49 s) exceeds the auto-detected baseline (1.18 s) by 279 %

Affected user actions	User action
73.6 /min	2 User actions

Browser	Geolocation	OS
All	All	All

**Root cause**  
Based on time correlation and analysis of all transactions that use these components, this issue has the following root cause

CheckDestination  
Custom service

Deployment  
Deployment change Today, 01:57 - 02:03

2 Response time degradations  
Service CheckDestination slow down Today, 01:58 - 02:18

Events on:  
Service CheckDestination

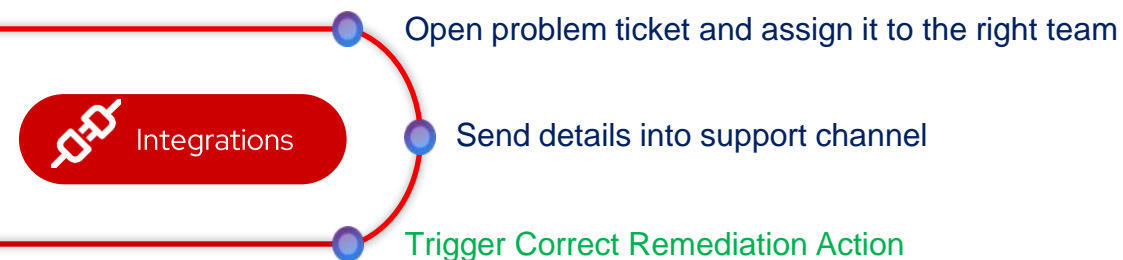

Analyze code level, database calls, and outgoing requests. Analyze response time degradation

Metric anomalies detected  
Review the metrics which show abnormal or outlying behavior.

**Comments**

11/11/2020 15:08 - Problem information sent into easytravel support channel  
11/11/2020 15:09 - Servicenow incident opened #875431  
11/11/2020 15:10 - Ansible rollback initiated of easyTravel 1.223.23432  
11/11/2020 15:20 - Service restored

**Visual resolution path**  
Click to see how we figured this out.

## Benefits of Auto-Remediation

**1** Reduction of alerts, incident tickets and MTTR > **Cost reduction**

**2** Ability to preempt outages, improved uptime

**3** Reduction of risk and human error

**4** **Improved user experiences**

# New Innovation

for an even better-together value  
for our customers

--	--	---	---	--	---	---

\*The Grail™ architecture enables Dynatrace to scale an entire multi-tenant cluster to that dimension, however we reserve right to deliver based on actual market need

\*\* potential combined performance gain on complex queries, leveraging massive-parallel processing, faster parsing compared to regular expressions, and large datasets that would require rehydration or similar

\*\*\* up to 90% reduced work due to unified Grail storage in contrast to common siloed data storage approaches with preparing ingest data-sources like metrics, traces and logs for pre-aggregation and elimination of high cardinalities

# Dynatrace Query Language (DQL)

## Purpose-built

for observability and security

## Powerful

for even advanced use-cases, parsing built-in

## Effortless

migration from e.g. Splunk

```
fetch logs, from:now()-20m
| filter endsWith(log.source, "/media/datastore/server-data/log/audit.config.change.")
      and dt.host_group.id == "cluster_deve2e"
| parse content, "timestamp('yyyy-MM-dd HH:mm:ss'):ts
      ld json:settings
      ipaddr:client_ip //IPv4/6"
| fields ts,
      type = settings[eventType],
      tenant = settings[tenantId],
      user = settings[userId],
      change = settings[jsonPatch]
| filter in(type, array("UPDATE", "DELETE")) and user != "unknown"
| summarize creates = countIf(type=="CREATE"), upd = countIf(type=="UPDATE"), del = countIf(type=="DELETE"),
      by:{tenant, user}
| fieldsAdd changes_per_min = (upd + del)/20
| sort changes_per_min desc
```

Intelligent Automation  
with answers from data.

## SECURE \*by design

compliance built-in, as data stays within Dynatrace platform; EdgeConnect for secured remote actions

## INTELLIGENT

Answer driven automation with Davis Causal AI, precise analytics, context, custom logic, feedback-loops

## CLOUD-NATIVE

Unique Kubernetes Orchestration with Dynatrace Kubernetes Operator and Keptn Life-Cycle Toolkit

Use SNOW for human centric workflows, Dynatrace for cloud-native, real-time, data-centric

architected for enterprise scale with

## MILLIONS of Automations/day

## EFFICIENT

with rapidly growing number of ready-made ecosystem integrations, consolidates many home-grown tools

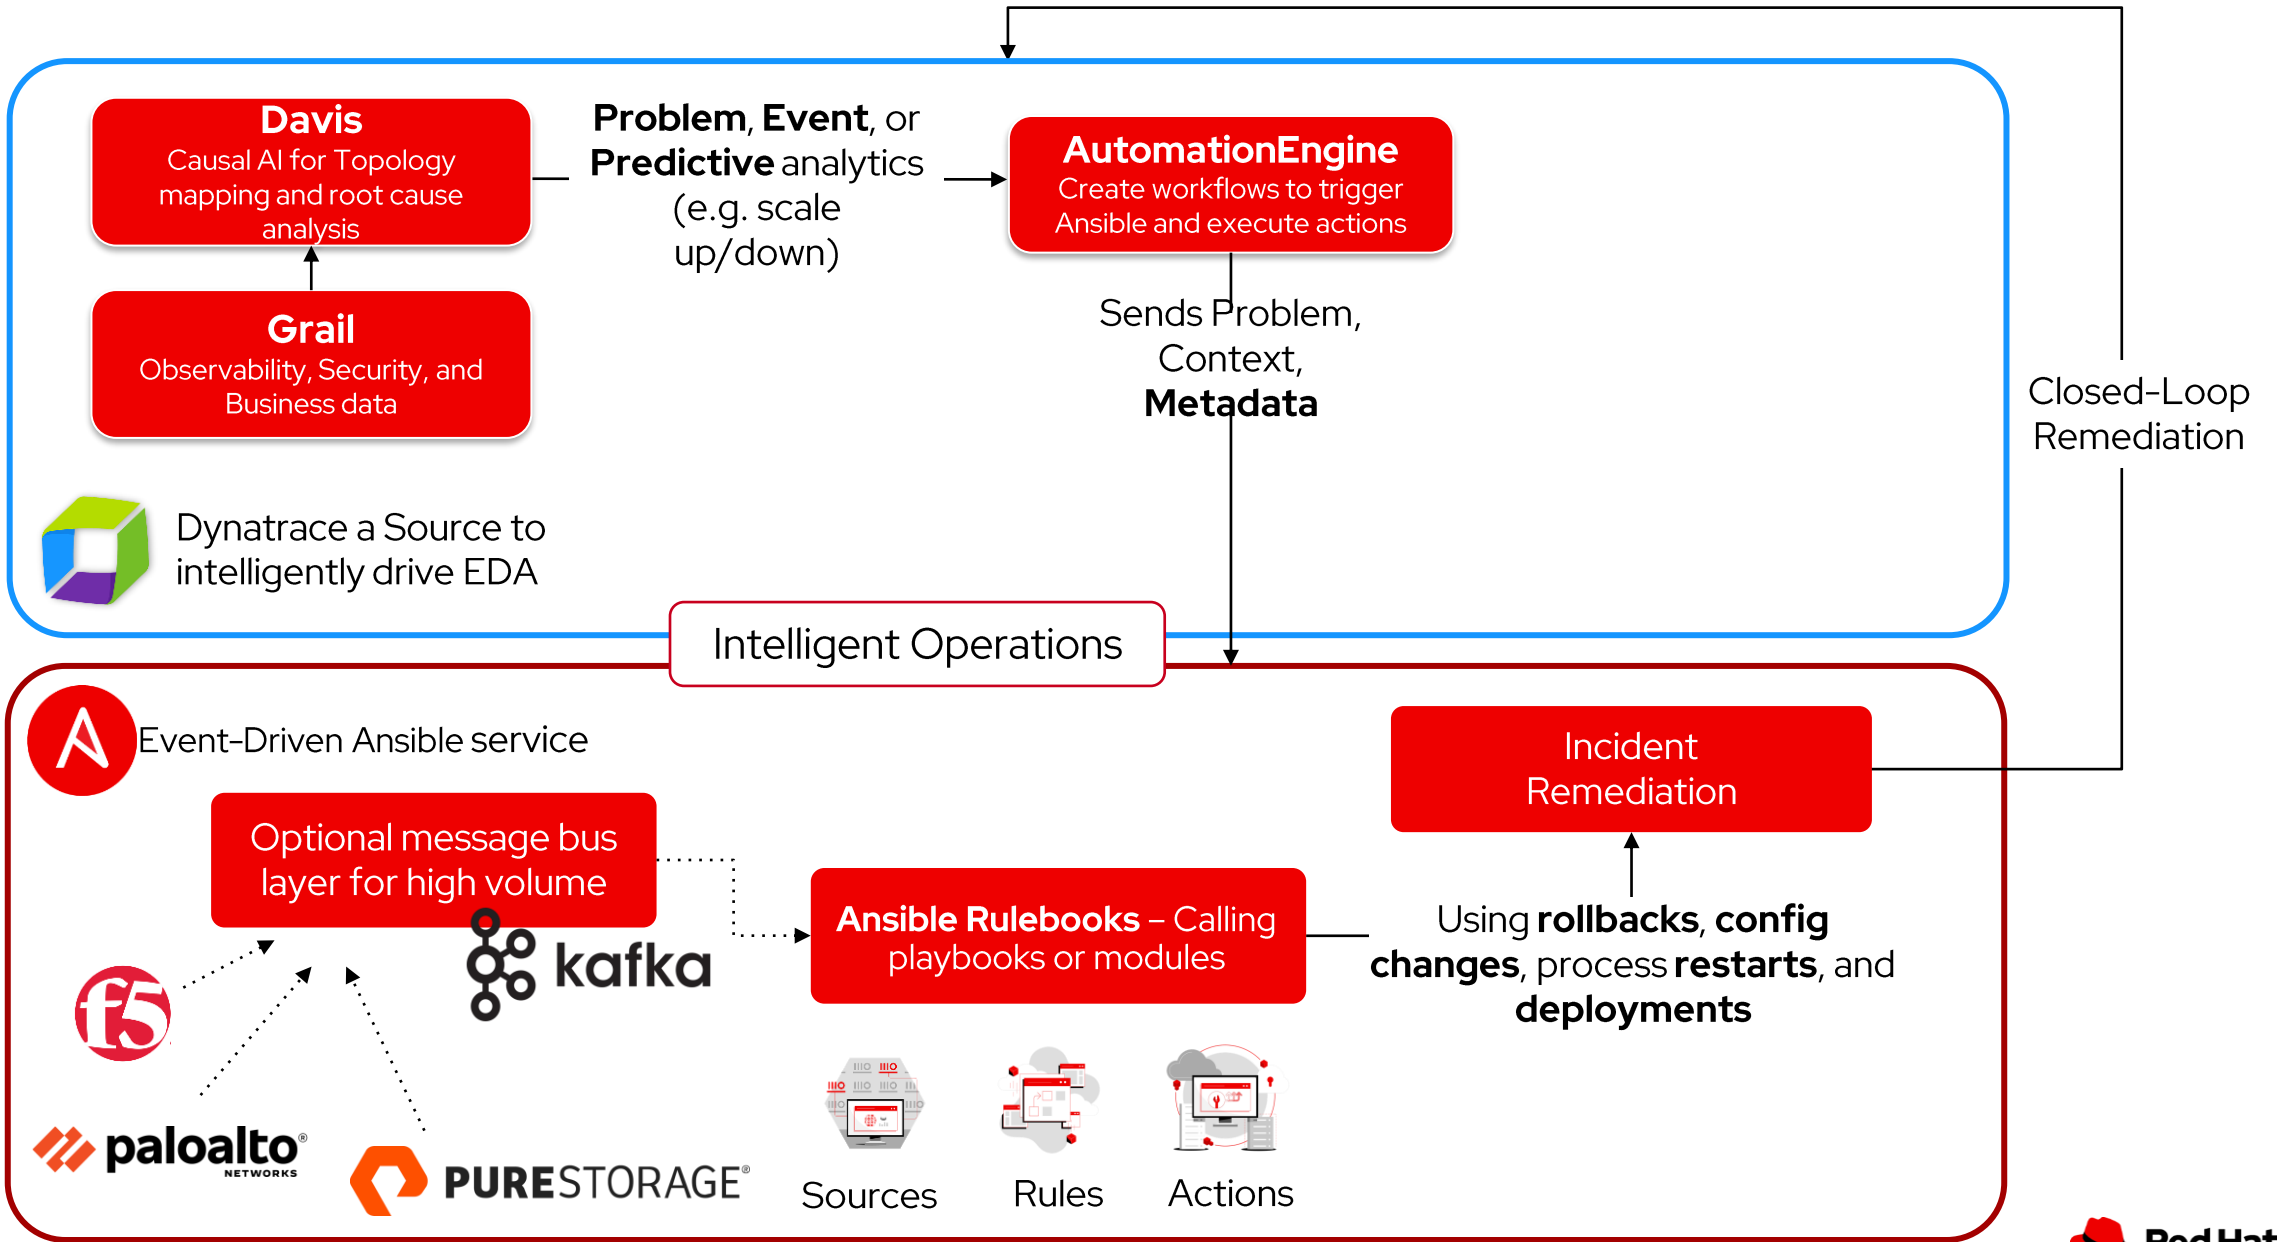

## BizDevSecOps

Automation for Observability, Security and Business use-cases. From simple to complex, all made easy.

# AutomationEngine

# Automated Problem Remediation

## Root Cause Identification

Automatically provide high fidelity root cause and configuration item (CI) data with **Dynatrace problem events**

## Problem Remediation

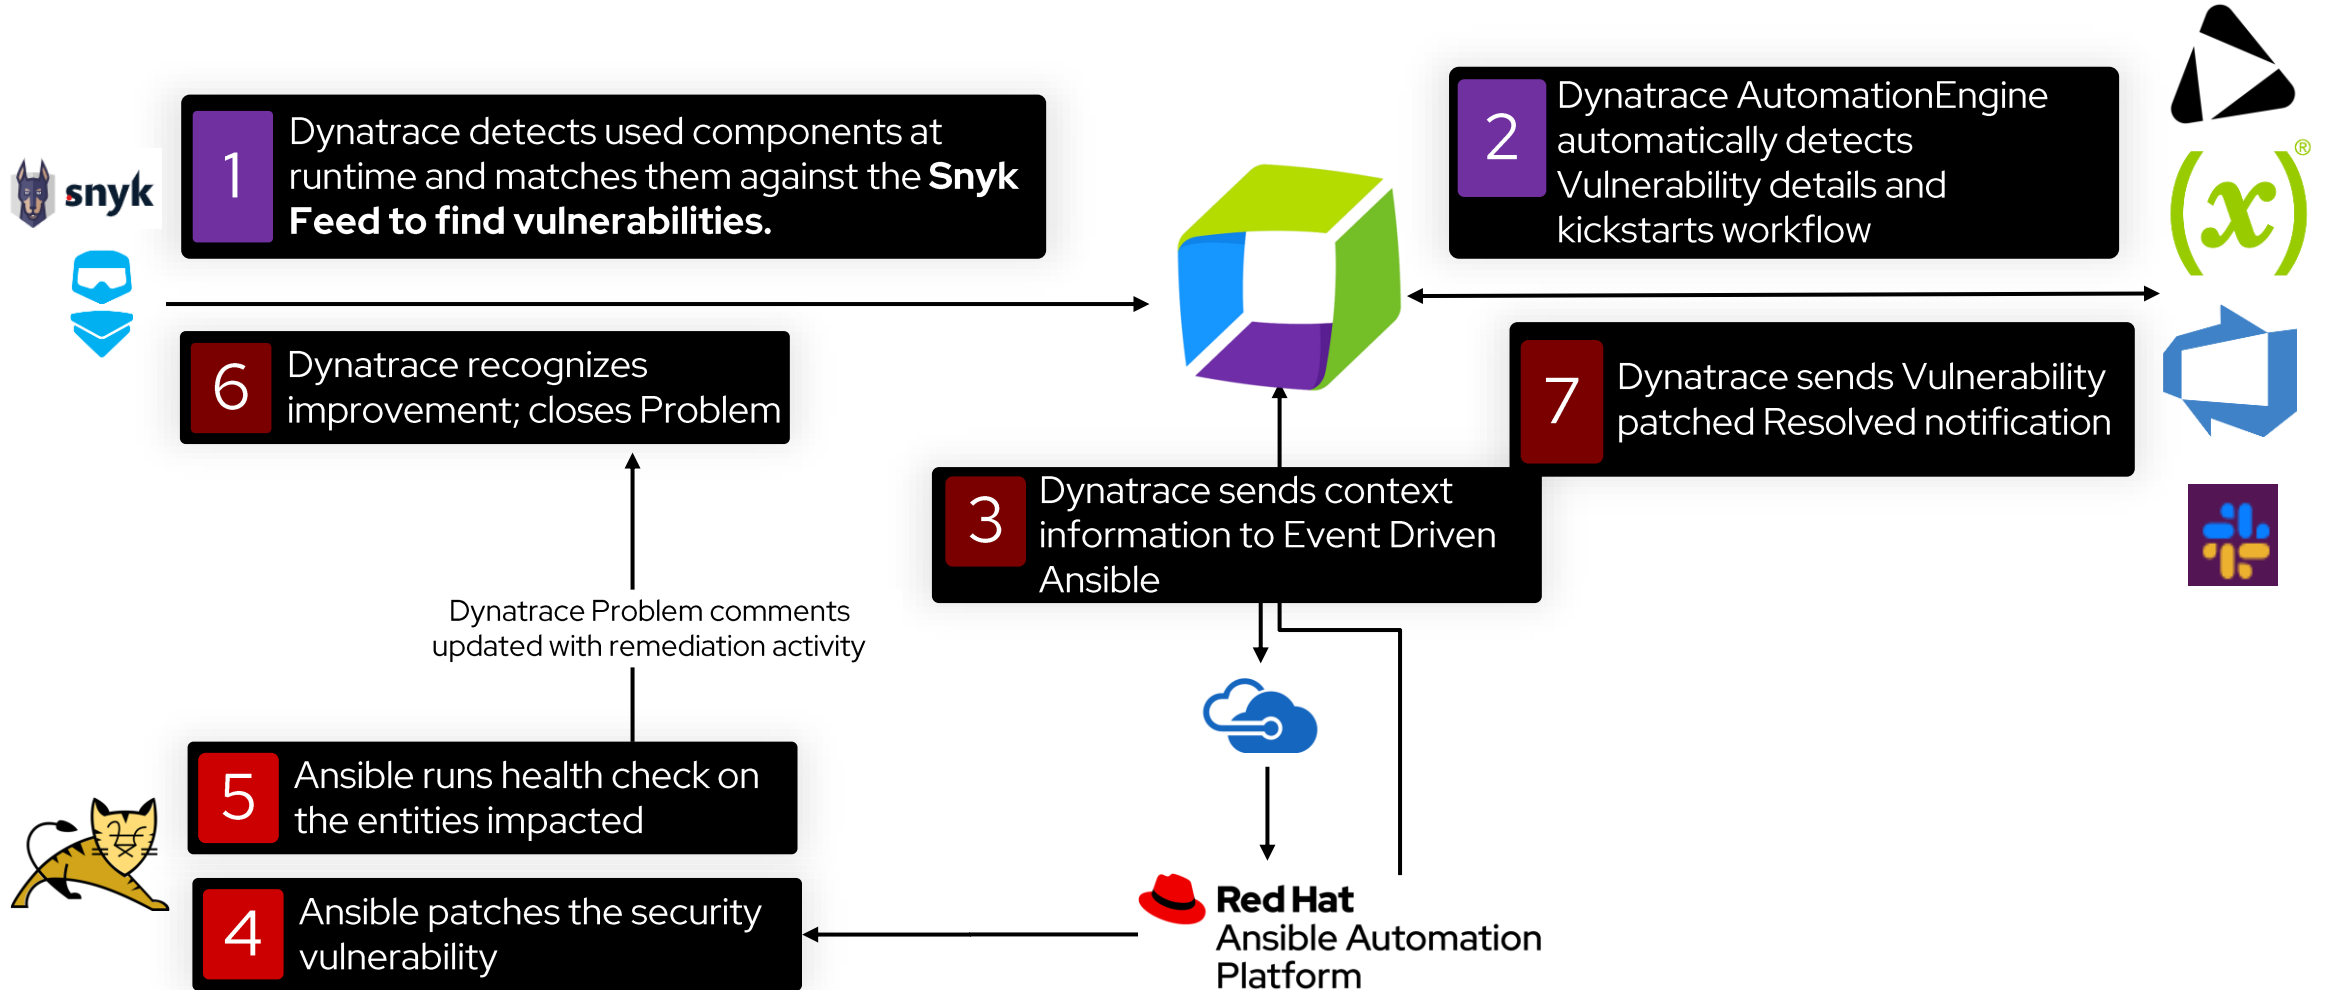

Ansible automatically **triggers remediation scripts to resolve** common application problems

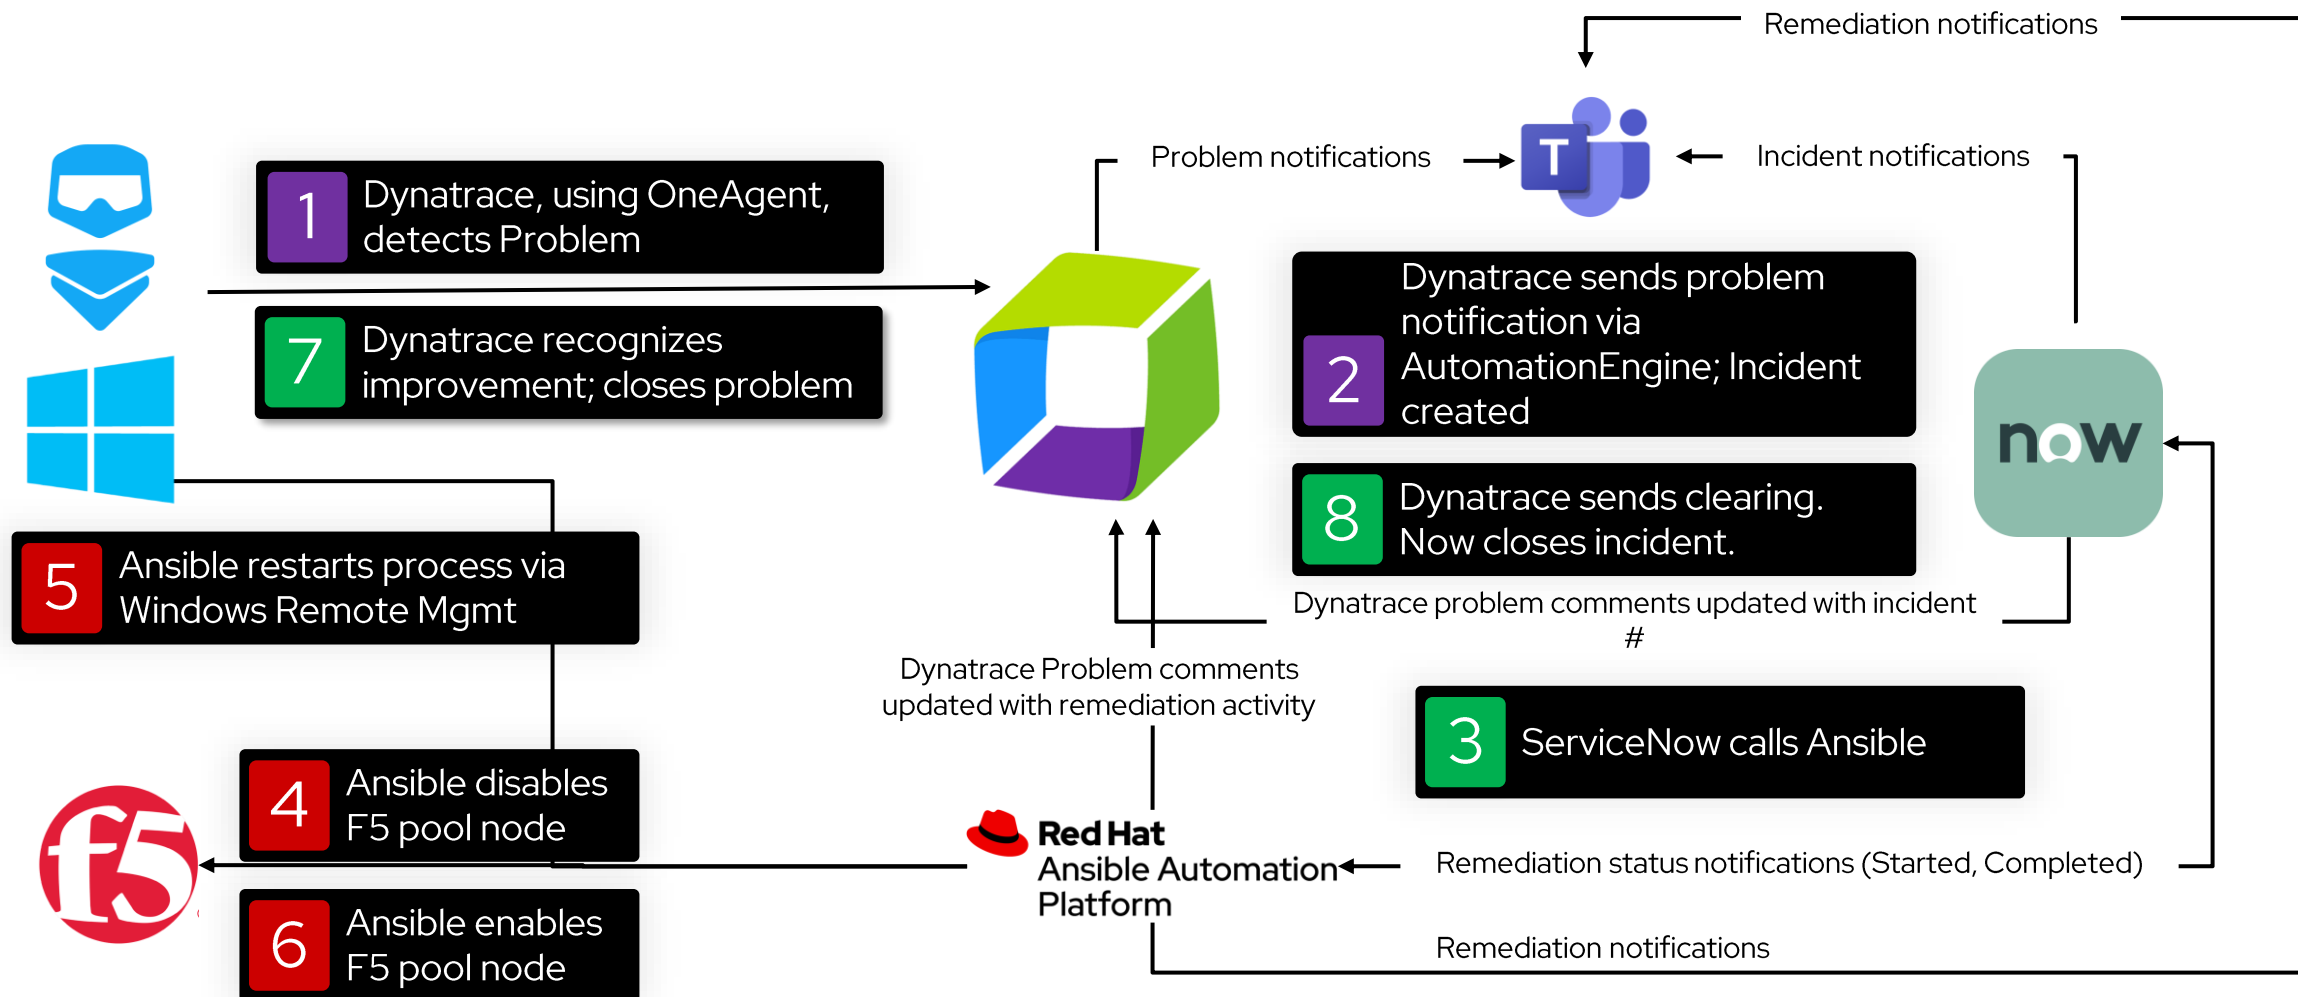

## Problem Recovery

**Automatically log** remediation activities, validate recovery, and communicate status

# 5 steps to start your auto-remediation success WITH ANSIBLE

**1 Analyze**  
Evaluate your problems for repetitive patterns to identify automation opportunities.

**2 Create**  
Determine current rulebooks and playbooks on Red Hat Ansible that can be manually triggered.

**3 Trigger**  
Trigger the playbooks manually when a Problem is detected by Dynatrace, learn and repeat.

**4 Integrate**  
Create approval-based triggering of remediation with Change Management.

**5 Automate**  
Fully automate the remediation actions with a proven track record end-to-end.
