#RedHatOSD
The Ansible project is an open source community sponsored by Red Hat. It’s also a simple automation language that perfectly describes IT application environments in Ansible Playbooks.

**Ansible Engine** is a supported product built from the Ansible community project.

**Ansible Tower** is an enterprise framework for controlling, securing, managing and extending your Ansible automation with a UI and RESTful API.
AUTOMATION FOR EVERYONE

BUSINESS  DEV  QA/SECURITY  IT OPERATIONS
EVEN I CAN RUN A PLAYBOOK :-}
---
- name: install and start apache
  hosts: web
  become: yes
  vars:
    http_port: 80

  tasks:
  - name: httpd package is present
    yum:
      name: httpd
      state: latest

  - name: latest index.html file is present
    copy:
      src: files/index.html
      dest: /var/www/html/

  - name: httpd is started
    service:
      name: httpd
      state: started

#RedHatOSD
Module code is executed locally on the control node.

Module code is copied to the managed node, executed, then removed.
WHAT CAN I DO WITH ANSIBLE?

Automate the deployment and management of your entire IT footprint.

Do this...

- Orchestration
- Configuration Management
- Application Deployment
- Provisioning
- Continuous Delivery
- Security and Compliance

On these...

- Firewalls
- Load Balancers
- Applications
- Containers
- Clouds
- Servers
- Infrastructure
- Storage
- Network Devices
- And more...
WHY ANSIBLE?

**SIMPLE**
- Human readable automation
- No special coding skills needed
- Tasks executed in order
- Usable by every team
- Get productive quickly

**POWERFUL**
- App deployment
- Configuration management
- Workflow orchestration
- Network automation
- Orchestrate the app lifecycle

**AGENTLESS**
- Agentless architecture
- Uses OpenSSH & WinRM
- No agents to exploit or update
- Get started immediately
- More efficient & more secure

AGENTLESS

FUELED BY AN INNOVATIVE OPEN SOURCE COMMUNITY
A Tower Isolated Node is a **headless Ansible Tower** that can be used for local execution capacity either in:

- Constrained networking environment (DMZ)
- Virtual Private Cloud
- Remote Data center/Plants/POPs
- Edge Computing

The only prerequisite is that there is **SSH connectivity** from the Tower Cluster to the Isolated Node.

WHAT’S NEW IN ANSIBLE TOWER 3.3

TOWER AS A SERVICE
- Now deployable as a **container** in OpenShift
- **Dynamically scale & add capacity** Ansible Tower at runtime
- **Push-button Ansible Tower deployment for OpenShift users**

SECURITY
- More granular role-based permissions
- Run **multiple versions of Ansible Engine** in parallel
- New set of **permissions for admin users**

[https://www.ansible.com/blog/ansible-tower-3.3-available-now](https://www.ansible.com/blog/ansible-tower-3.3-available-now)
WHAT’S NEW IN ANSIBLE TOWER 3.3

IMPROVED SCALING

○ Scale up and down based on job capacity
○ Manage Instance Groups by policy
○ Instance Groups can be defined by percentage of total cluster capacity

AUTOMATION AS A SERVICE

#RedHatOSD
NETWORKING AUTOMATION

Configure, validate, & ensure continuous compliance for network devices

**BUILD** with Red Hat Ansible Engine
- Get automating quickly.
- Integrate multi-vendor configurations.
- Ideal for both brownfield and greenfield

**MANAGE** with Red Hat Ansible Engine
- Methodically track configuration drift.
- Make changes across any set of network devices.
- Validate that changes were successful.

**SCALE** with Red Hat Ansible Tower
- Ensure ongoing steadystate on a schedule.
- Use role-based access controls with specific teams.
- Integrate external third-party solutions with RESTful API.

Automate discrete tasks

Automate business processes

Orchestrate & operationalize automation
