InnerSource is the use of **open source software development best practices** and the establishment of an **open source-like culture** within organizations for the development of its non-open-source and/or proprietary software.

Why InnerSource?

Organizations adopt InnerSource when they wish to reap select benefits of open source methods

Accelerate development and encourage collaboration

Working together increases development velocity and helps avoid duplication of efforts internally.

Increase transparency and accountability

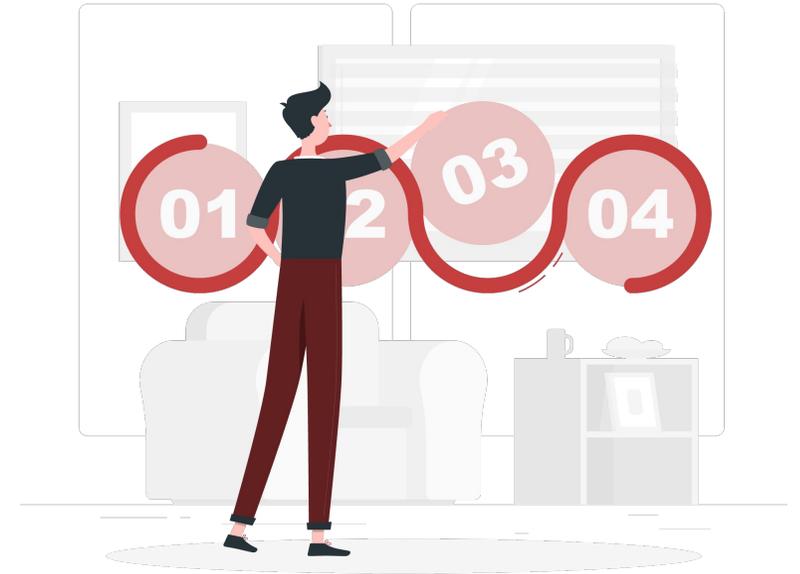

When everyone can view the code, everyone knows when and where changes have occurred.

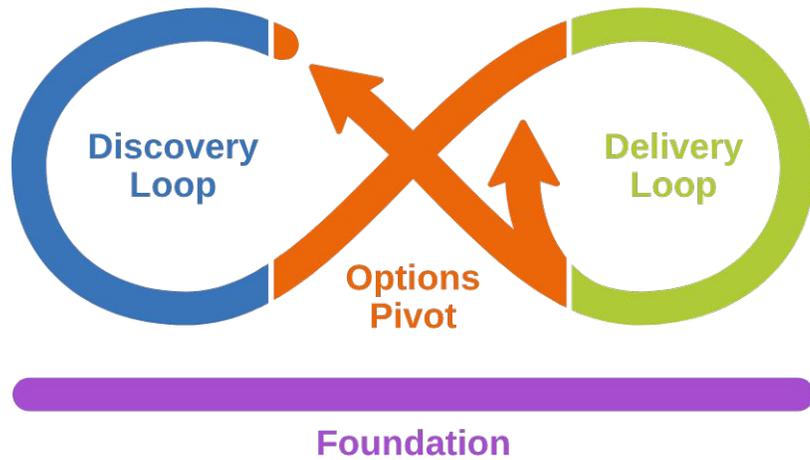

Enhance employee engagement

Developers like working the open source way, even when they're working on software they can't release publicly.

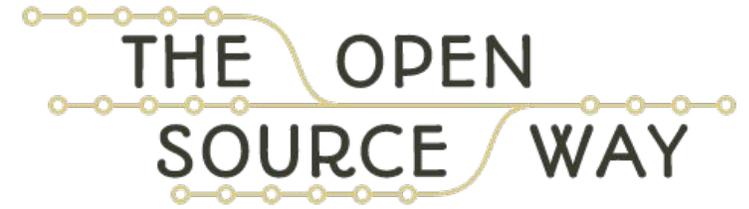

People, Technology and Process

Case Study: Problem

The Use Case

- A front-end JS web application SDK
- Consumed widely by a number of areas of the business

The Problem

- Small SDK Team (little capacity for feature requests or for ongoing maintenance)
- Lack of experience within niche contexts
- Code located in an environment not accessible to all

Case Study: Solution

The Solution

- Creation of an SDK extensions project accessible to all
- Established roles Framework
- GHE, CI/CD on OpenShift
- Community engagement
- Clear promotion process
- Focus on automated governance

The Benefits

- Acceleration of value delivery
- Extensions as a 'proving ground'
- Community provides experience of niche contexts

Recap

- InnerSource is the use of open source software development best practices and the establishment of an open source-like culture within an organisation.
- People, Process and Technology problem.
- Head over to InnerSource Commons.
