## Ansible Dell Technologies Demo repository

This repository is used to demonstrate how automation with Ansible Automation Platform 2 can be leveraged to manage DELL Technologies hardware in real use cases

This set of example playbooks and environment supposes that you already have a running AAP2 infrastructure, and know how to install and provision it.

### Structure

The repository is structured in folders, one for each scenario:

- [Bare Metal for Hardware setup - iDRAC](#)
- [Networking for setting up SonicOS switches](#)
- [Virtual machines for Setting up RHEL VMs on a VMWare environment](#)
- [PowerFlex storage with ESXi and RHEL](#)
- [Openshift provisioning and PowerFlex storage](#)
- [Manage DELL systems with OpenManage Enterprise](#)

# RED HAT® OPENS SHIFT

# Dell Validated Design for Red Hat OpenShift

- Scalable reference architecture to simplify and accelerate enterprise-grade container deployments on bare metal
- Speeds adoption time and minimizes risk to develop and deploy containerized applications
- Support for OpenShift Platform Plus (OPP) as an option, including:
  - Advanced Cluster Manager (ACM)
  - Advanced Cluster Security (ACS)
  - OpenShift Data Foundation (ODF)
  - Quay central image registry
- AI/ML & Analytic Validated Designs on OCP:
  - DataStax Enterprise on Apache Cassandra
  - Edge Analytics for Industry 4.0
  - Real Time Data Streaming
  - Spark on Kubernetes
  - KubeFlow
  - And more!

## Key Values:

- **Pre-validated** and documented with design and **Implementation and Deployment guides (With Ansible!)** on Dell Infrastructure
- Optimized for flexibility, scalability, and performance
- Enables enterprises to rapidly adopt DevOps methodology or manage pre-built containerized applications
- **Supports 1-node, 3-node, and 6+ node architectures**, for both **data center and edge applications**
- Select from multiple storage options –including **Dell PowerMax, PowerScale, and PowerStore**, all with access to Container Storage Interface (CSI) and Dell's Container Storage Modules (CSM).
- Leverage key Red Hat capabilities, such as **Zero Touch Provisioning (ZTP)**

# What are Container Storage Modules?

1

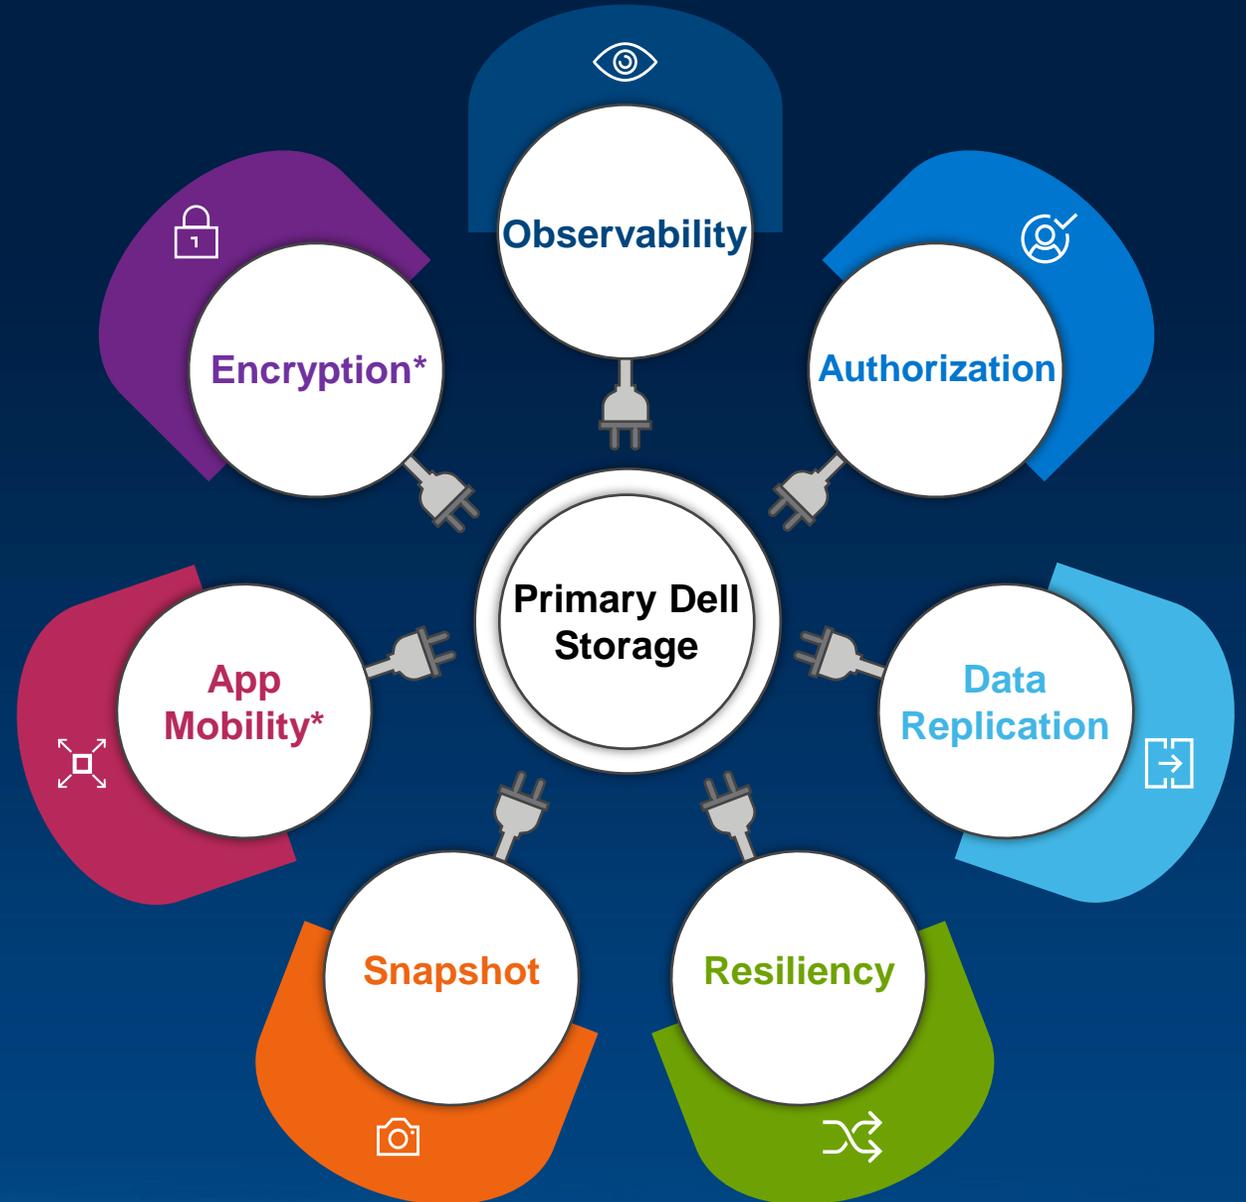

Simple, consistent, integrated and automated experience for storage and cloud native stateful applications

2

Builds on top of the Container Storage Interface (CSI) foundation to deliver unique, powerful storage and enterprise capabilities

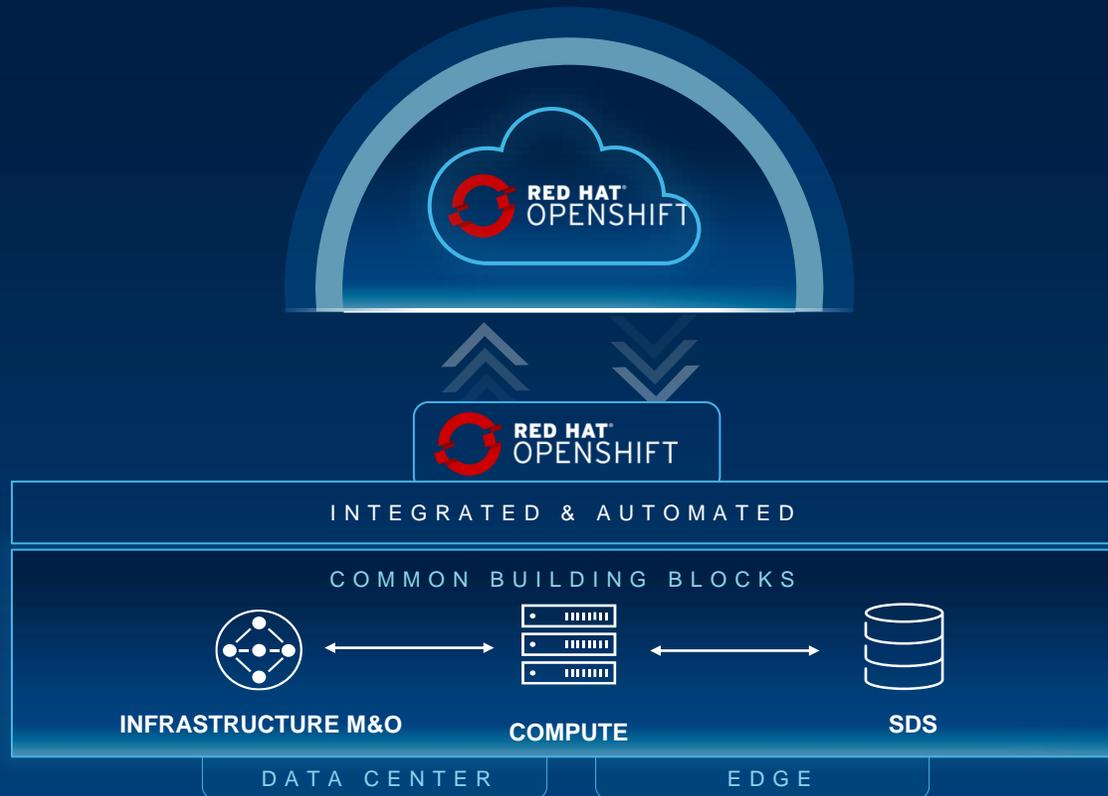

3

Includes a variety of modules, each with specific functionalities that allow you to get the most out of your storage array

# APEX Cloud Platform for Red Hat OpenShift

# 1

Designed collaboratively to optimize and extend the leading Kubernetes distribution

Extending our 24-year history as a Red Hat Premier Global Partner

Ideal for workloads performance-intensive workloads

## Bridge the Cloud Divide

Accelerate time to value with a purpose-built platform

## Unleash Application Value

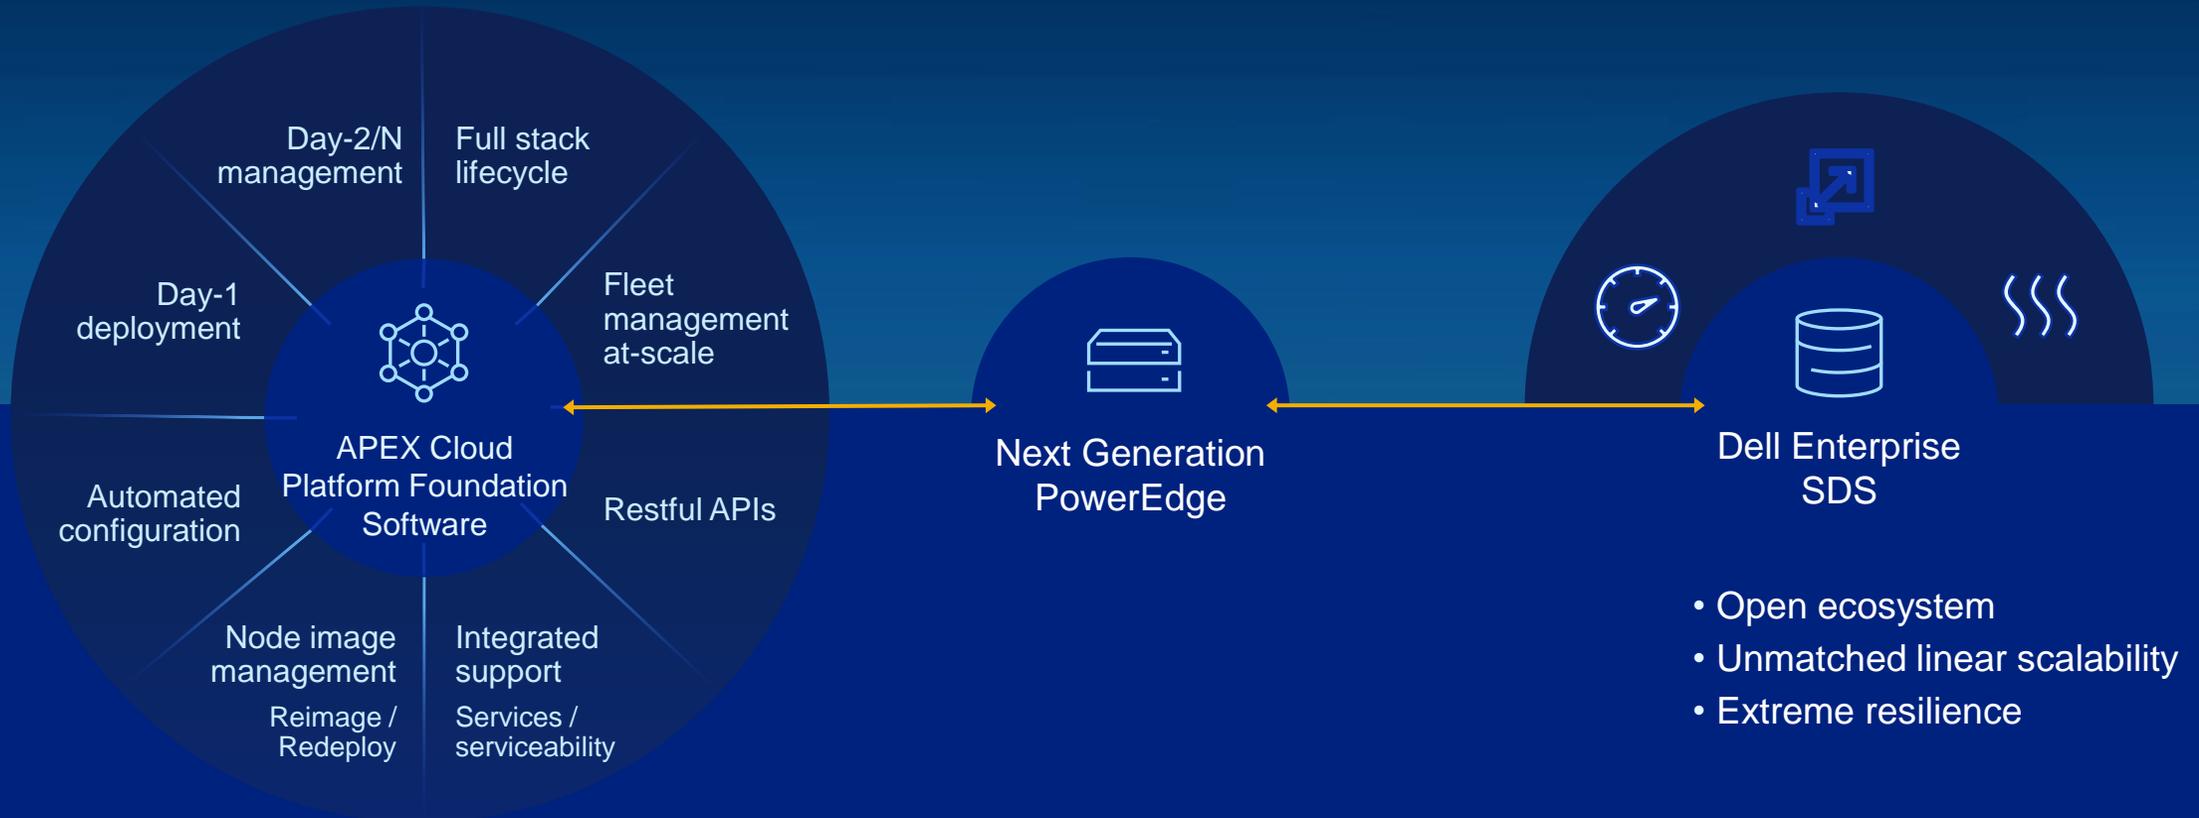

Seamlessly extend applications and data across the IT landscape

## Harden Security and Governance

Enhance control with multi-layer security and compliance capabilities

# What is an APEX Cloud Platform

Leveraging the best of Dell Innovation to deliver new platforms for Multicloud

- Open ecosystem
- Unmatched linear scalability
- Extreme resilience

# APEX Cloud Platform Advantage

Expanding multi-cloud infrastructure to K8s on bare metal with OpenShift

## Typical DIY OpenShift Deployment

Mostly deploy on hypervisor with virtualization

Built with loosely coupled components that difficult to deploy and manage

Another Isolated storage to manage and operate

Resulting in longer TTV and higher TCO

## APEX Cloud Platform for Red Hat OpenShift

### OpenShift on Bare metal

**Eliminate** virtualization layer to reduce both acquisition and operation cost

### Fully automated with continuously validated state

**Bring** cloud like agility and efficiency for cloud native workloads through software driven automation

### Common storage across OpenShift ecosystem

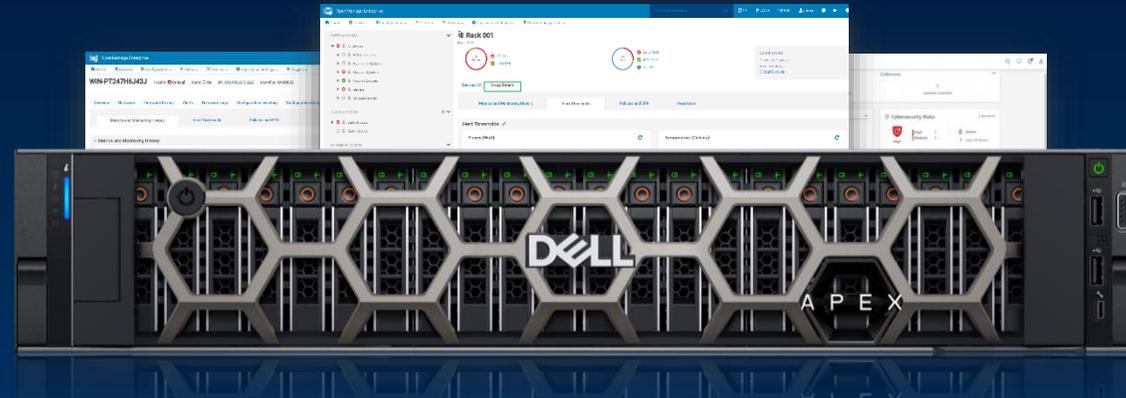

**Eliminate** storage silos across OpenShift ecosystem through optimized and consistent storage improving operational efficiency and enabling enhanced hybrid experience.

### New standard in OpenShift hybrid computing

Cloud integrated management & economics set a new standard for edge-core-cloud infrastructure, forming the new de facto building block for OpenShift hybrid cloud ecosystem.

# APEX Cloud Platform compute nodes

Purpose-built | Intelligent | Cyber Resilient | Sustainable

## Purpose-built

Scale AI, edge & performance anywhere.

## Intelligent

Accomplish more with automation & improve operational efficiencies.

## Cyber resilient

Accelerate zero trust adoption.

## Sustainable

Maximize power efficient performance.
