Stay competitive in a software-driven economy

Cloud-native approach

Faster Time To Market

Since development cycles are shortened, a microservices architecture supports more agile deployment and updates

Highly scalable

As demand for certain services grows, you can deploy across multiple servers, and infrastructures, to meet your needs..

Resilient

These independent services, when constructed properly, do not impact one another. This means that if one piece fails, the whole app doesn't go down, unlike the monolithic app model.

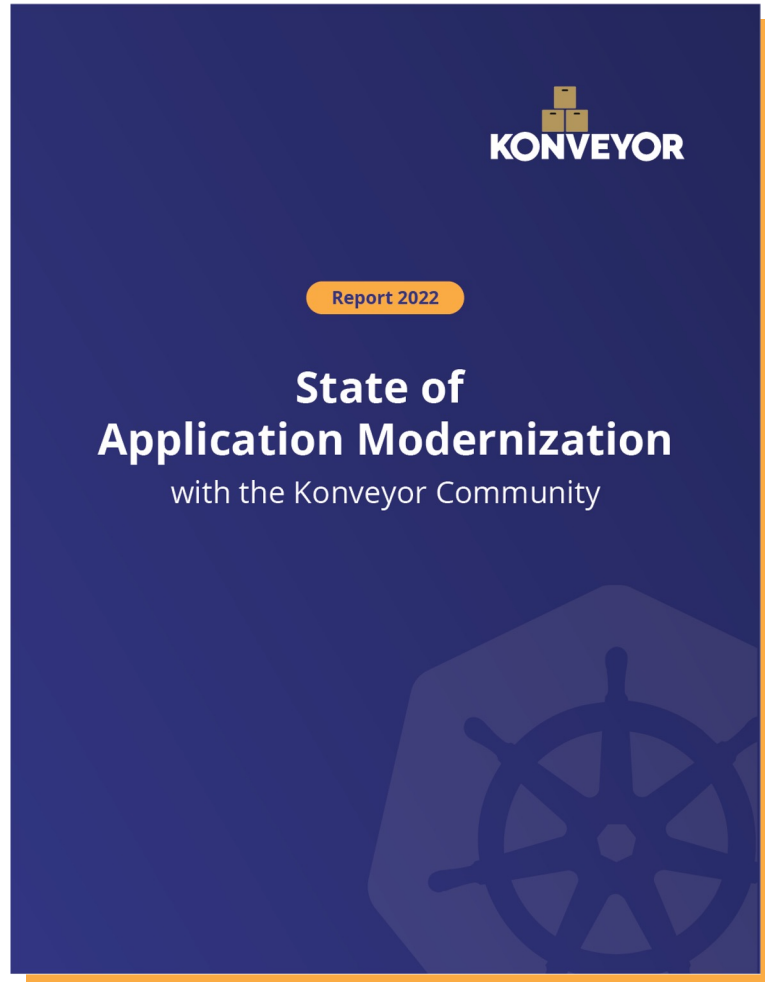

The Monolith

Modernization strategies

Action	Definition / Example	
Retire	Sunsetting the application.	
Retain	Continue running the application as-is.	
Rehost	Migrating an application as-is to a new platform. Example: Migrating virtual machines as is to a new virtualization platform.	
Replatform	Making optimizations to the application that do not require re-architecture or significant code changes in order to achieve business or technical benefits. Example: Migrating an application into a container in order to standardize application delivery and day-2 operations across application teams.	
Refactor	Changing how an application is developed and/or architected, typically to be more cloud-native Example: Strangling a monolith into microservices.	
Repurchase	Moving to SaaS or Replacing portions of an application with as a service offerings Example: Consuming Kafka as a Service within an existing application.	

The State of Application Modernization Report 2022

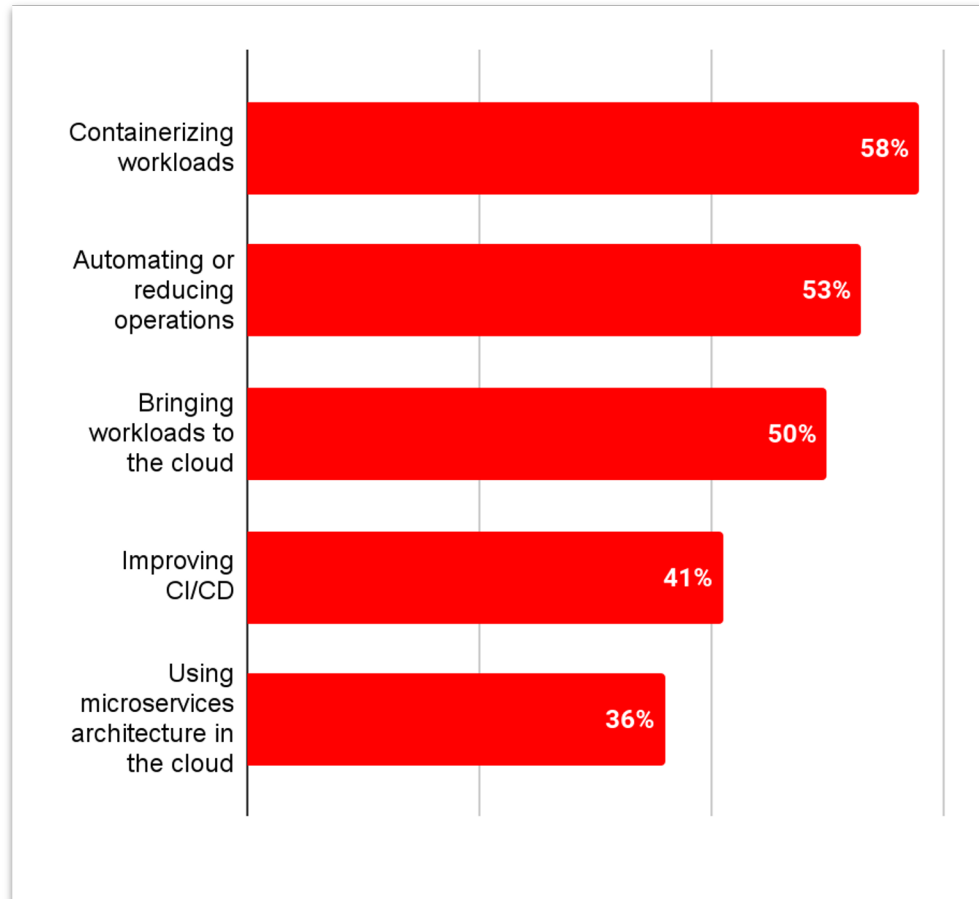

Learn why enterprises plan to modernize more than half of their existing applications to run on Kubernetes within the next year. And see how these 600 companies will approach the move, along with other key insights, to inform your modernization strategy.

Ways companies define modernization

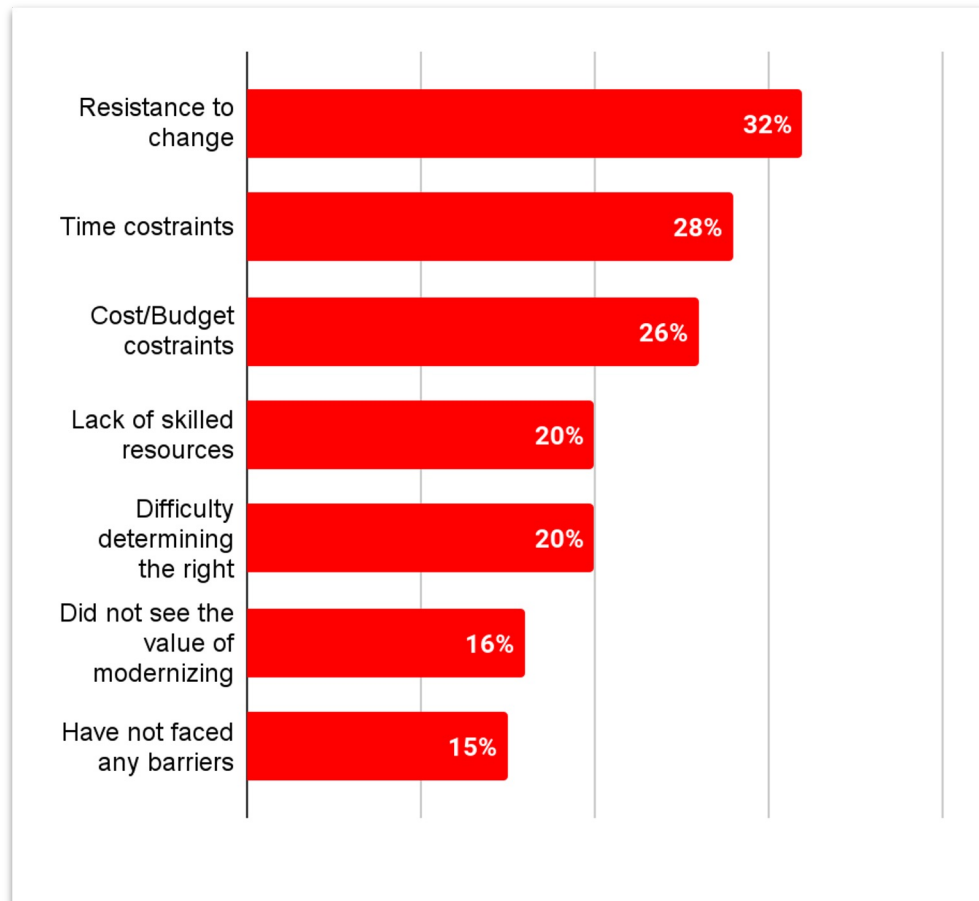

Top reasons for modernization

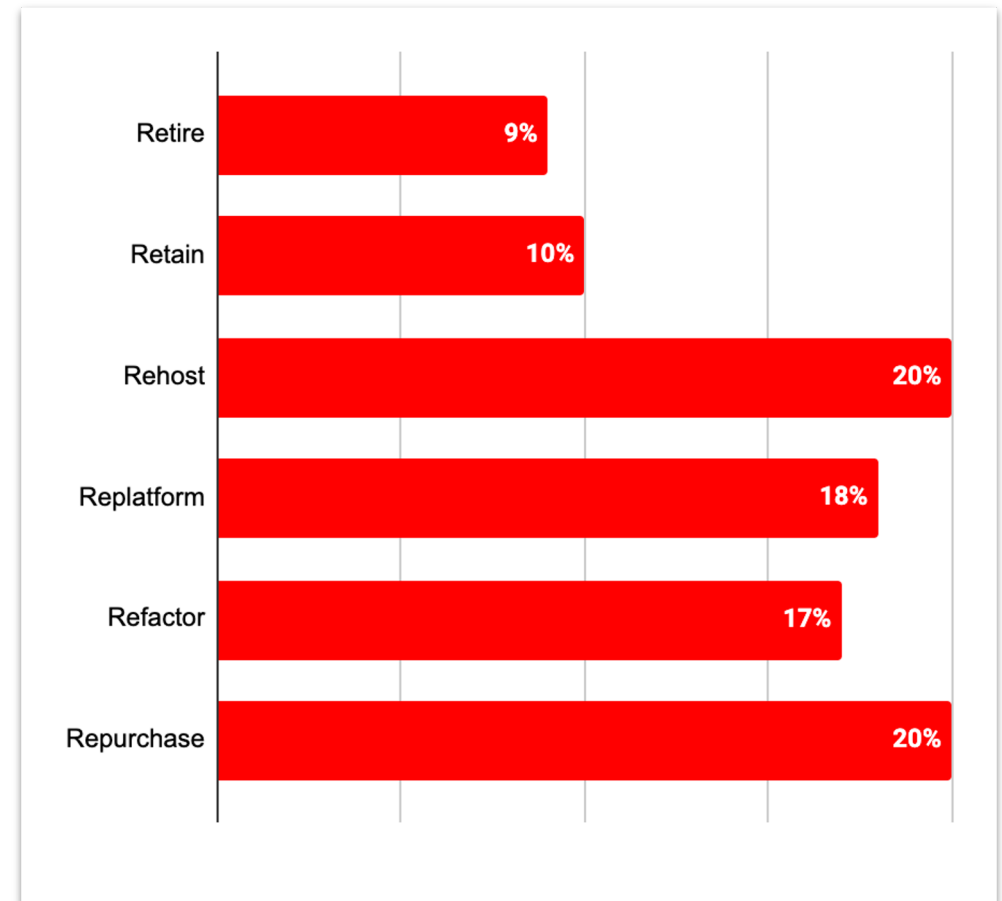

The State of Application Modernization Report 2022

Barriers to modernization

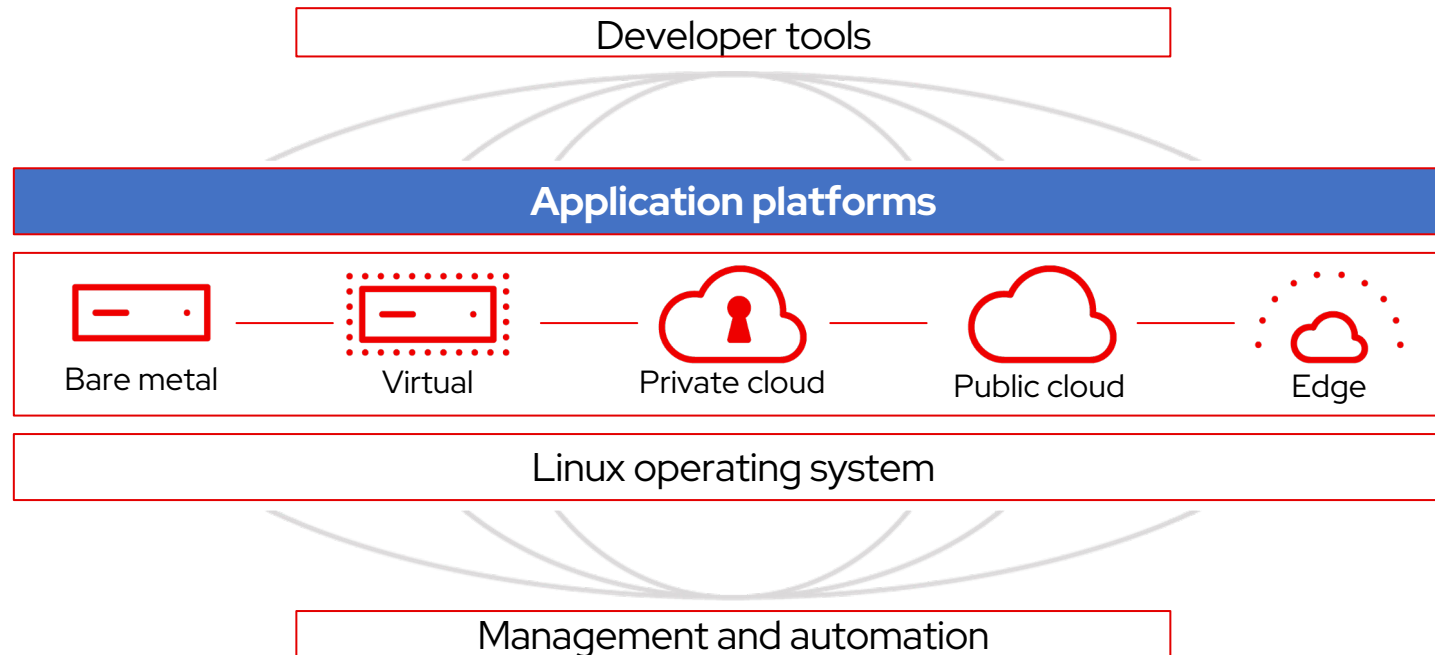

How to modernize

Open Hybrid Multi Cloud & Edge

Any workload, any footprint, any location

Vision

- ✓ **Develop** application **once**, **deploy everywhere** through automations
- ✓ **Same experience, same skills, same processes everywhere** (on premise, on multi cloud, on edge)
- ✓ Enabling a "**cloud brokering**" service model and Multi Cloud approach

Red Hat's flexible cloud-native solution

Tree of Taste

Green food, retail & online

Tree of Taste, a traditional food company, would like to

- ▶ Expand on the market, create new multichannel and in store services to improve customer experience
- ▶ Improve collaboration with partners and ecosystem
- ▶ Gain advantages from Edge computing technologies
- ▶ Gain IT agility and flexibility
