

Veeam Kasten

#1 Data Protection and Mobility for OpenShift and Kubernetes

Roberto Dellavedova
Enterprise System Engineer, Veeam Software

Veeam's mission is: "To tackle Day 2 data protection challenges on behalf of enterprises so that they can confidently run their applications on Kubernetes"

How Veeam Kasten Works

Discover

Automated discovery
of your Kubernetes application

Protect

Secure your Kubernetes
application and data

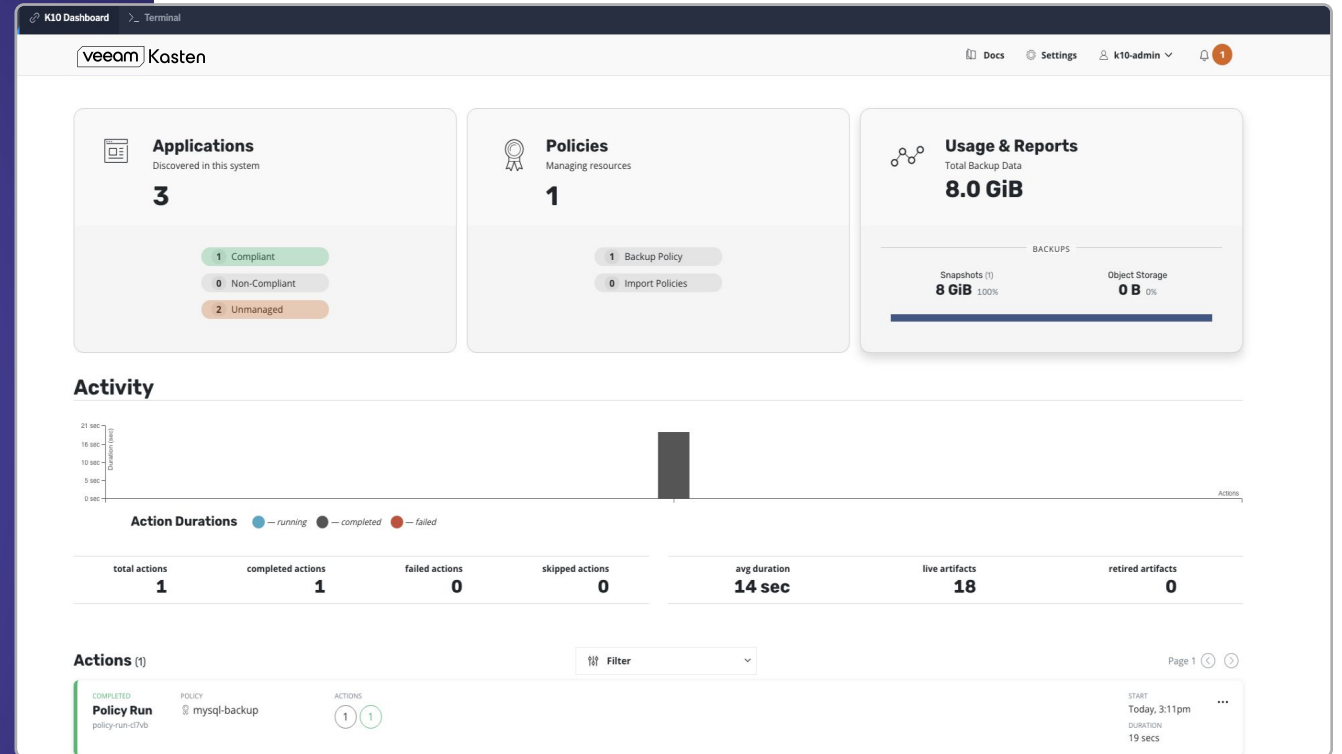

Restore Anywhere

Quickly and effectively **restore**
your Kubernetes application
and data anywhere

Discover

Capture your entire Kubernetes application stack

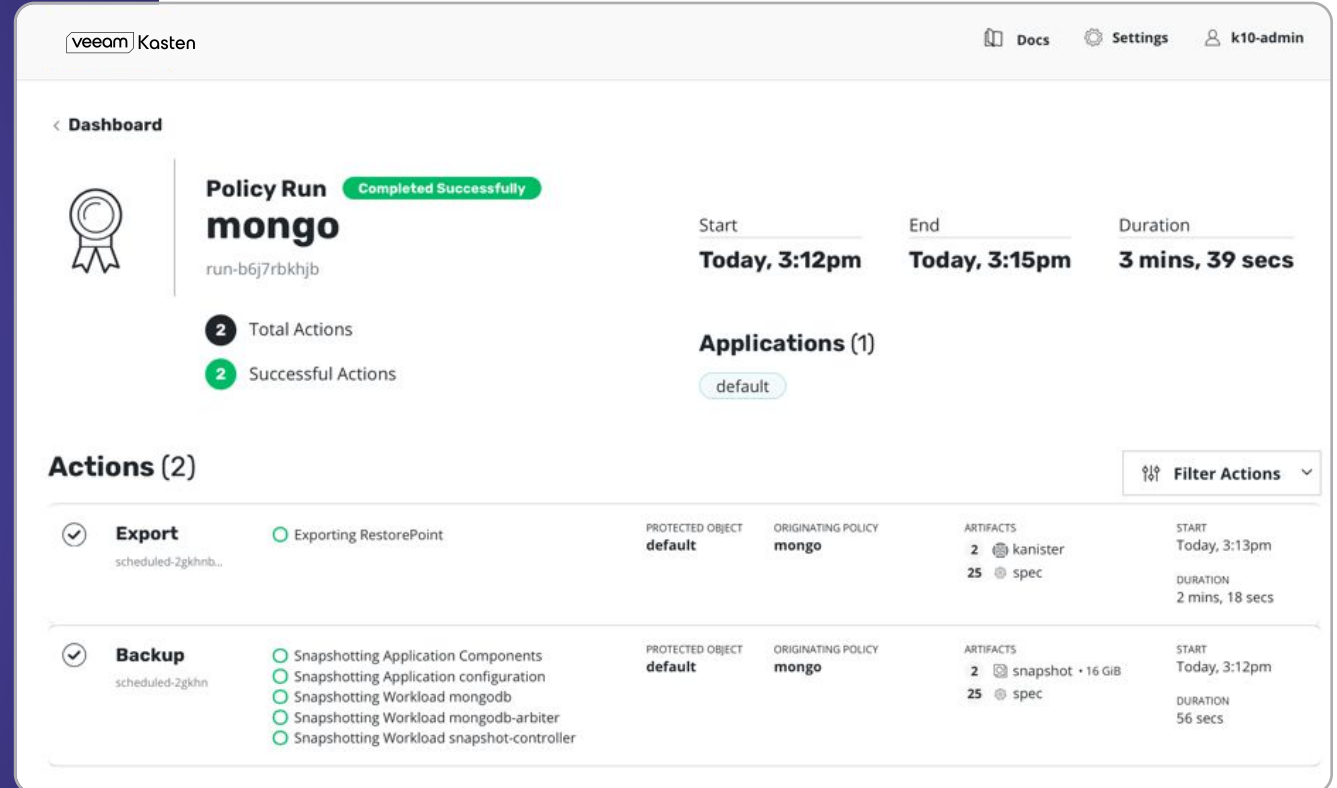

- Automatically discovers your Kubernetes applications and inventory all dependencies
- Includes resource definitions, configuration and underlying data
- Integrates with relational and NoSQL databases, all major Kubernetes distributions

Protect

Complete application protection

- Creates a copy of containers and specified data, and automatically updates the backup at a rate you decide
- Ensures comprehensive protection across multiple clusters and clouds
- Automated policies enable you to meet your backup SLAs

The screenshot displays the Veeam Protect interface for a user named 'k10-admin'. The main section shows a 'Policy Run' for 'mongo' (ID: run-b6j7rbkhjb) that has 'Completed Successfully'. The run started at 'Today, 3:12pm' and ended at 'Today, 3:15pm', with a duration of '3 mins, 39 secs'. Below this, there are two summary metrics: '2 Total Actions' and '2 Successful Actions'. A section for 'Applications (1)' shows a 'default' application. The 'Actions (2)' section contains a table with the following data:

Action	Details	Protected Object	Originating Policy	Artifacts	Start	Duration
Export	Exporting RestorePoint	default	mongo	2 kanister 25 spec	Today, 3:13pm	2 mins, 18 secs
Backup	Snapshotting Application Components Snapshotting Application configuration Snapshotting Workload mongod Snapshotting Workload mongodb-arbiter Snapshotting Workload snapshot-controller	default	mongo	2 snapshot • 16 GiB 25 spec	Today, 3:12pm	56 secs

Restore Anywhere

Coordinated application recovery

- Restores the entire application and data across clusters, regions, and clouds
- Recover from user errors, infrastructure failure, disasters or malicious attacks
- Leverage blueprints to properly orchestrate the restore of your application and data

The screenshot shows the Veeam Kasten web interface for configuring a restore point for a MySQL application. The main panel on the left displays the 'Restore application mysql' page, which includes a 'Past day' section with a restore point for 'Today, 3:11pm' labeled 'mysql-backup'. The right panel, titled 'Restore Point', allows for configuration of the restore process. It includes an 'Application Name' field set to 'mysql', 'Optional Restore Settings' such as 'Pre and Post-Restore Action Hooks' (Before, After - On Success, After - On Failure), 'Data-Only Restore', 'Don't wait for workloads to be ready', 'Apply transforms to restored resources', and 'Overwrite existing'. The 'Artifacts' section shows a table of artifacts to be restored, including a snapshot of 1 volume.

RESTORE POINTS VOLUME PVC	VOLUME ID	STORAGE CLASS NAME	SIZE
<input checked="" type="checkbox"/> data-mysql-0	data-mysql-0	csi-hostpath-sc	8 GiB

We keep your business running

Data Security

Data Recovery

Data Freedom

Data Security

Why Veeam Kasten

Security Everywhere

Don't be a victim -- treat data protection as a Day 0 operation

Ransomware Protection

Backup immutability & always-on encryption keeps your data safe

Kubernetes-Native RBAC

Deliver secure self-service across teams & personas

Security Ecosystem

Integrate with industry-leading SIEM, Policy-as-Code, & KMS tools

Data Recovery

Why Veeam Kasten

Reliable Backup and Fast Recovery

100% Kubernetes-native solution for protecting your cloud native apps

Simple Recovery

Recover working applications in-place, cloning, or recovering to other clusters

Intelligent Policies

Support enterprise-scale operations with built-in automation

Application Consistency

Customizable application integration for every Kubernetes workload

Data Freedom

Why Veeam Kasten

Gain Application Freedom

They are your applications, run them where you want

Application Mobility

Enable hybrid/multi-cloud across different distributions, clouds, & infrastructure

VMs on K8s & Databases

Accelerate application transformation by supporting diverse workloads

Freedom of Choice

Agnostic with broadest ecosystem of supported distributions, infrastructure & apps

Better Together: Kasten by Veeam + Red Hat

OpenShift Back Up & Disaster Recovery

OpenShift Mobility, Migration, Upgrades

OpenShift on AWS (ROSA), Azure (ARO), Hybrid-Cloud

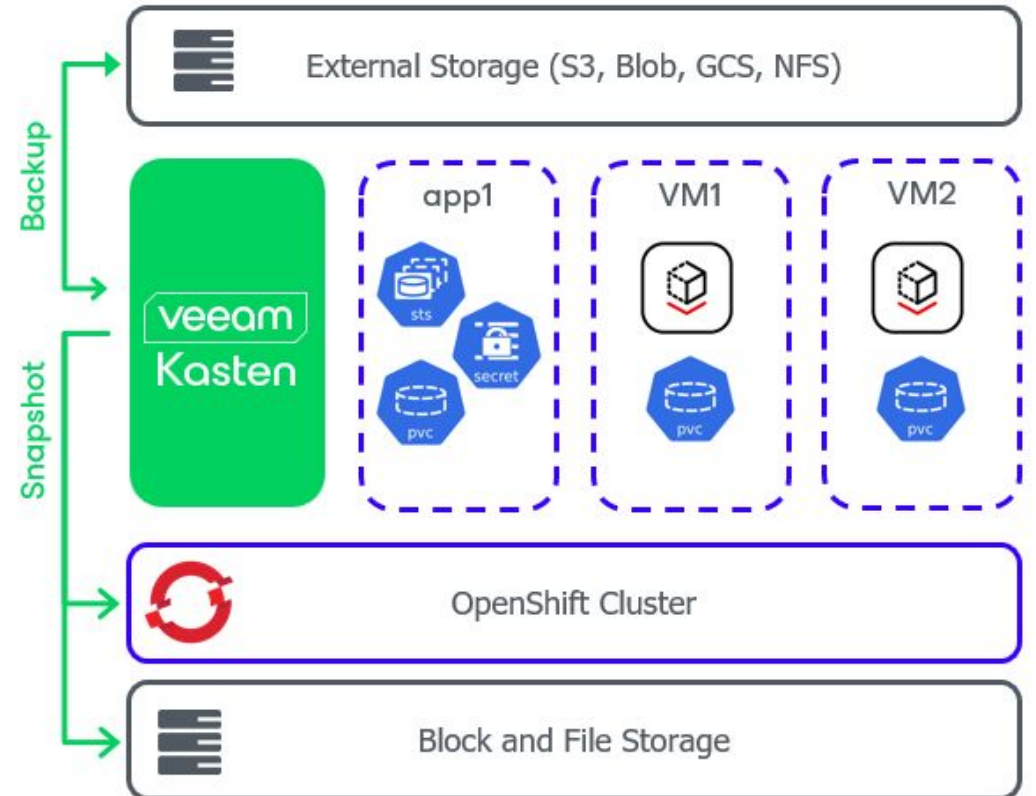

OpenShift Virtualization Integration

Application-Specific Data Management
Kasten Blueprints for Data Services

Platform Plus
OpenShift ACM, ACS & ODF Integrations

Veeam Kasten v7.0

Introducing Veeam Kasten V7.0

Continuous, fast paced innovation

Nov
2022

5.5

- Intelligent Job Staggering
- Backup Windows
- Policy Presets
- OpenShift Virtualization
- IPv6

Jun
2023

6.0

- VBR Integration
- Transform Library
- Blueprint Bindings
- Multi-cluster License Management

Nov
2023

6.5

- Multi-app Restore
- Iron Bank
- SBOMs
- Blockmode Datamover & EBS CBT
- Datadog SIEM

May 2024

7.0

Cyber Resilience

Enterprise Solutions

and more!

Kasten V7.0

What's New

Cyber Resilience

Public Sector

- FIPS 140-3 Compliance

Ransomware Protection

- Azure Blob
- Block-mode backups

SIEM Integrations

- Azure Sentinel

Deployment

- Secure authentication
- Helm chart signing

Enterprise Solutions

Cloud Native and VMs

- OpenShift Advanced Cluster Management integration
- OpenShift container image protection
- Efficient K8s VM backups

Cloud Transactability

- Azure Marketplace

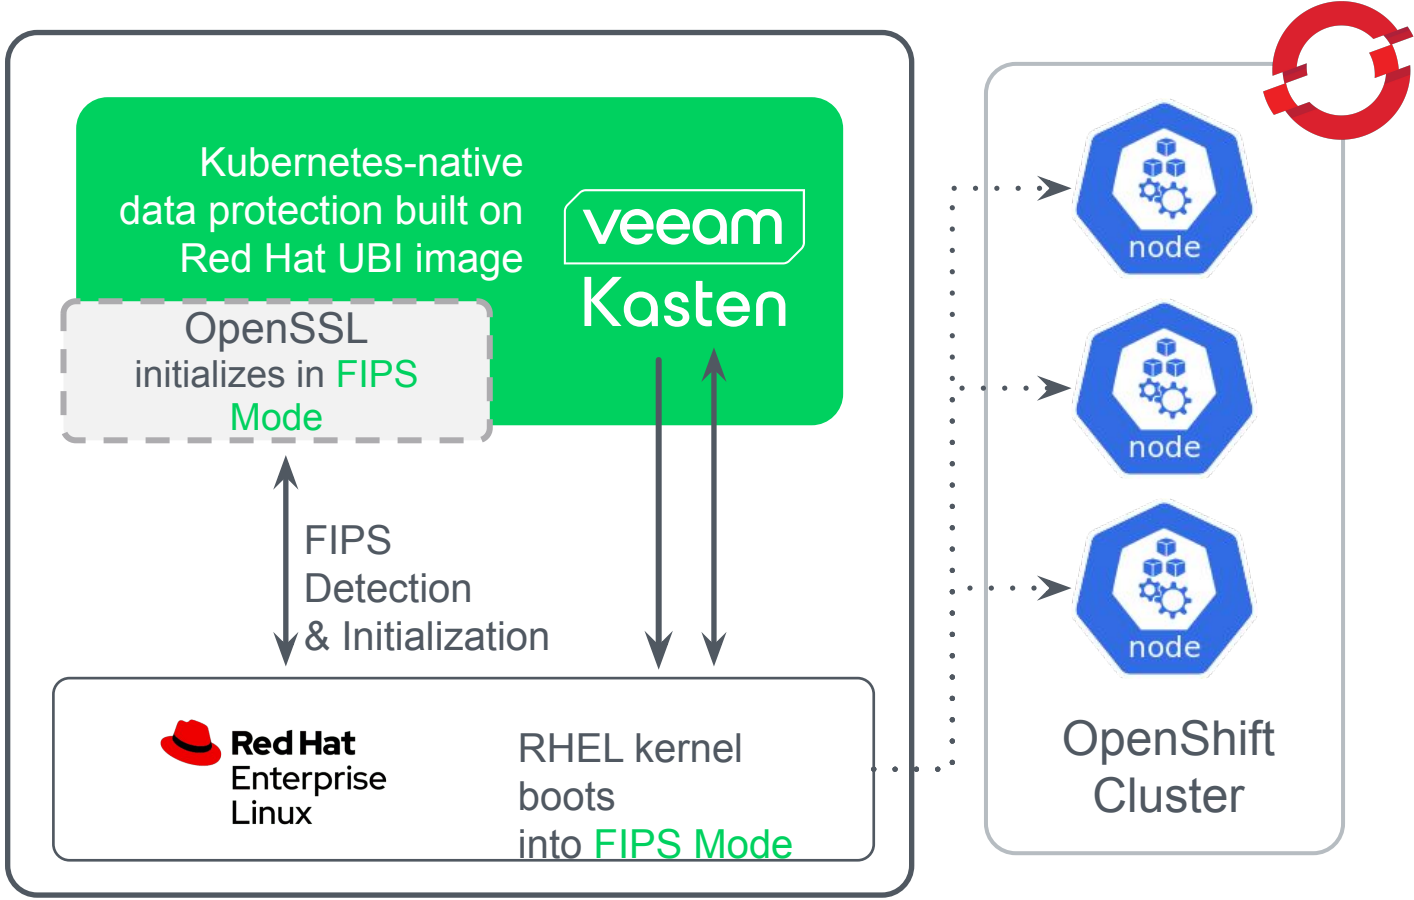

Recovery Focused

- Kasten-DR
- VBR Instant Recovery
- In-place volume cloning

Industry's first Kubernetes-native data protection supporting FIPS-enabled clusters

Kasten with FIPS 140-3

FIPS Compliant with OpenShift

Dashboard Auth via OpenShift

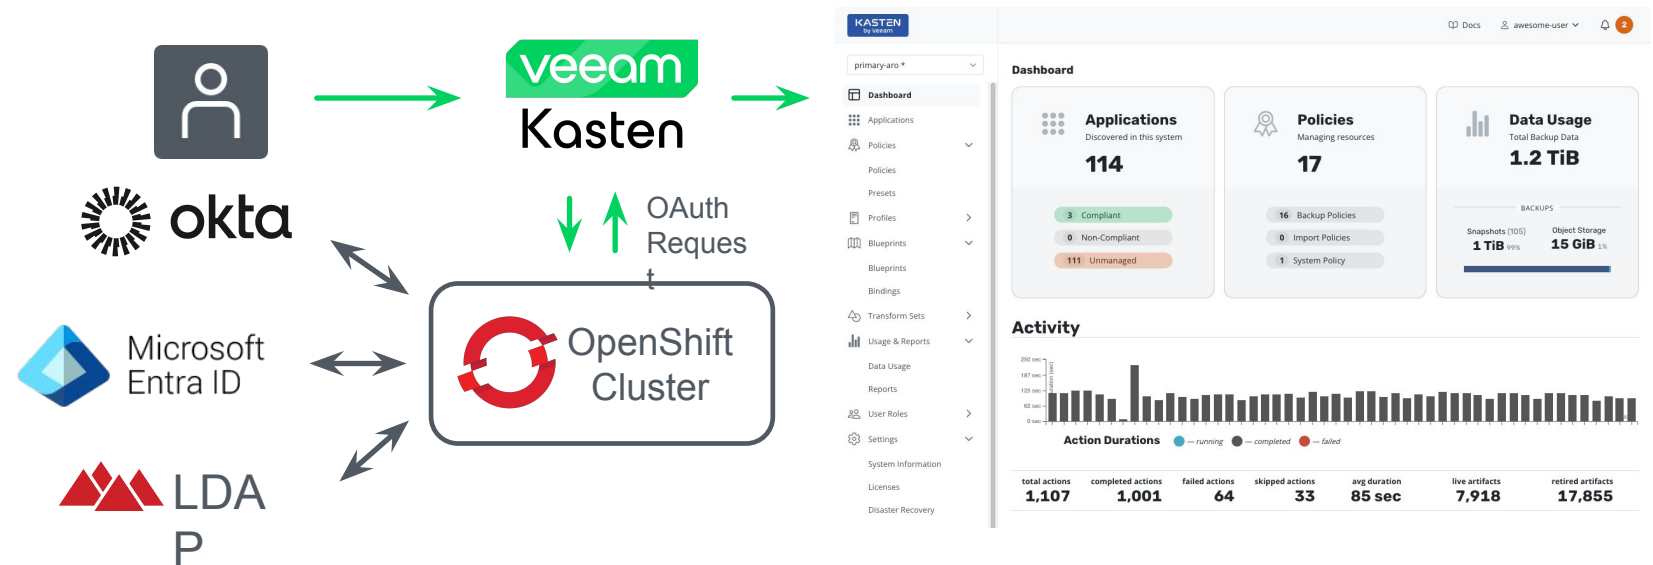

Simplified OAuth configuration

What is it?

- Provides multi-user authentication to Kasten Dashboard for secure self-service
- Supports multiple backend IDPs
- User ID consistency simplifies RBAC enforcement

What's new? *Better living through automation!*

- Automatic service account & token creation
- Automatic cert bundle creation
- GitOps-friendly secrets for advanced configurations

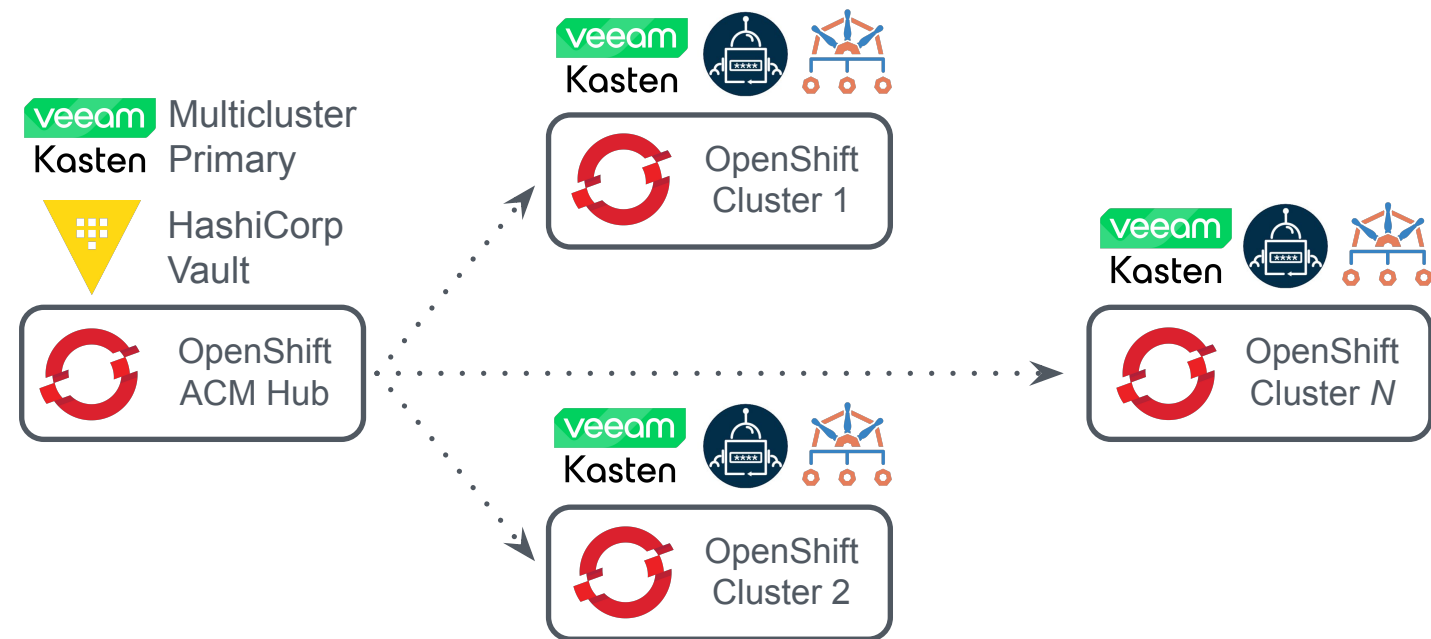

Advanced Cluster Manager Solution Guide

Scalability via OpenShift Platform Plus tools

What's new?

- Quick start guide for configuring scalable deployment & data protection guardrail management
- Leverages full value of OpenShift stack by using Advanced Cluster Manager to automatically deploy and configure Kasten across large environments
- Example ACM integration with Kyverno to audit and enforce immutable backups
- Example secure configuration of Kasten auth and multicluster via External Secrets Operator and Vault

ImageStream Protection

Immutable container image backup

What is it?

- Native support for protecting & restoring container images managed by ImageStreams using OpenShift internal registry
- Uses standard Kasten Location Profiles – no dependency on separate registry
- Restores exact container builds to local registry in event of cluster loss

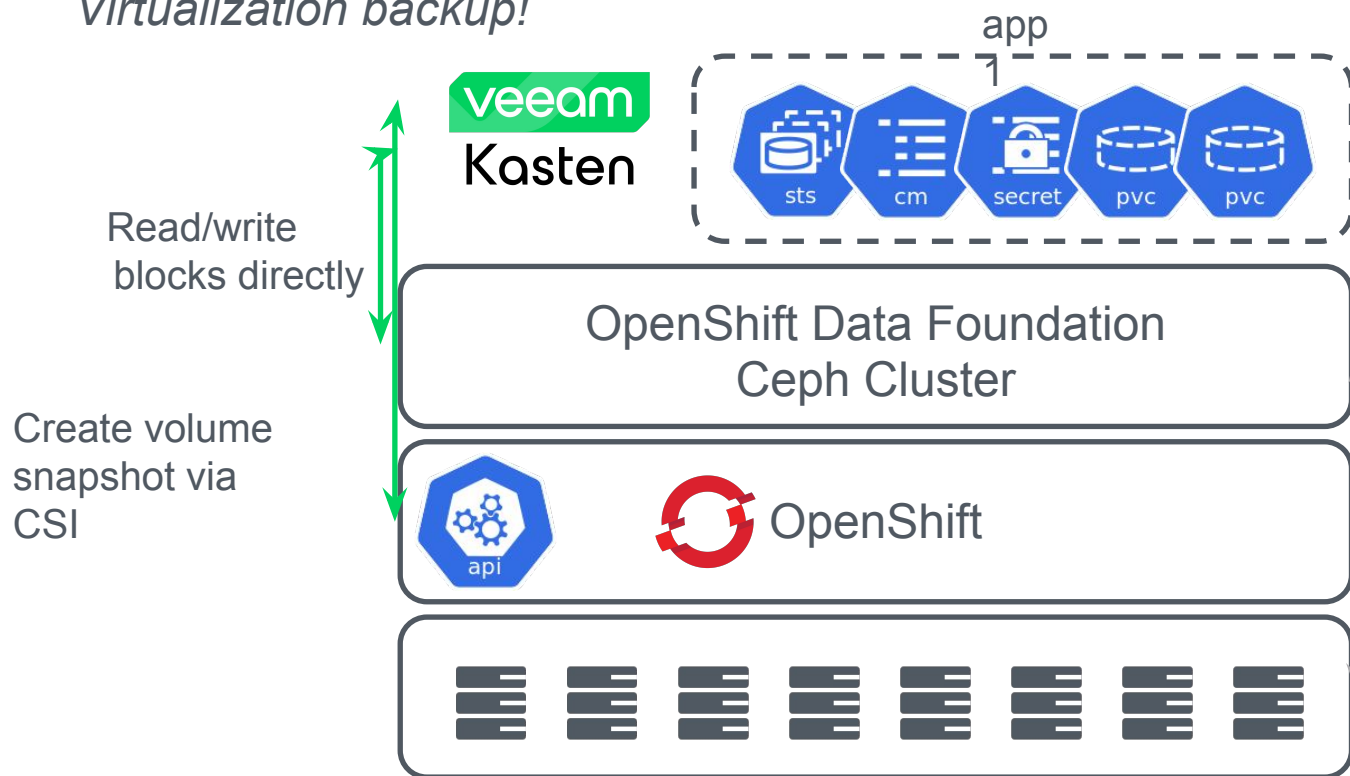

CephRBD Integration

OpenShift Enhancements

Direct API integration between Kasten and CephRBD volume manager for blockmode exports & restores

Why does it matter?

- Reduces in-cluster attack surface for datamover operations
- Improves export and restore performance
- Provides incremental backups vs full export – *useful for OpenShift Virtualization backup!*

Additional Recovery Enhancements

New in 7.0

In-place Volume Cloning

Restores timestamp-appended PVC “copies” from backup

- Non-disruptive to running workload
- Preserves namespace boundaries
- Useful for extracting individual files

Kasten-DR

Protects local Kasten configuration/catalog

- Incremental backups with improved export performance
- Adds Restore workflow via Dashboard UI
- Protects additional Kasten resources

VBR Instant Recovery

Manage Instant Recovery within Kasten Dashboard

- Automatic migration of PVCs to primary storage
- On-going migration status
- Automatic clean up in VBR console following migration

Veeam Kasten v7.5

Sneak peek

Preview

Veeam Kasten v7.5

What's coming?

Performance improvements

Management of large scale applications with millions of files / items

ISO/IEC 21007 Compliance

FIPS 140-3 with Veeam Kasten Multi-Cluster

Azure Managed Identity for OpenShift ARO

OpenShift Security Enhancements

Integration with new annotation-based controls in OpenShift Security Context Constraints cannot (intentionally or not) be applied to other workloads

Google Cloud Storage Immutability
