Deploy Use in Diffusers

Edit model card

### Stable Diffusion v1-5 Model Card

Stable Diffusion is a latent text-to-image diffusion model capable of generating photo-realistic images given any text input. For more information about how Stable Diffusion functions, please have a look at 's [Stable Diffusion blog](#).

The **Stable-Diffusion-v1-5** checkpoint was initialized with the weights of the [Stable-Diffusion-v1-2](#) checkpoint and subsequently fine-tuned on 595k steps at resolution 512x512 on "laion-aesthetics v2 5+" and 10% dropping of the text-conditioning to improve [classifier-free guidance sampling](#).

Testing apps against Enterprise Contract

Enterprise Contract is a set of tools for verifying the provenance of application snapshots and validating them against a clearly defined policy. The Enterprise Contract policy is defined using the rego policy language and is described here in Enterprise Contract Policies.
