*“Red Hat technology stands out from the competition in terms of its ability to run **virtualized workloads** and **container workloads** in a streamlined and well-integrated manner. Red Hat allows us to deliver value to our users more quickly, minimizing time to market and accelerating the software development life cycle.”*

– Gökhan Ergül, CTO, [sahibinden.com](https://www.sahibinden.com)

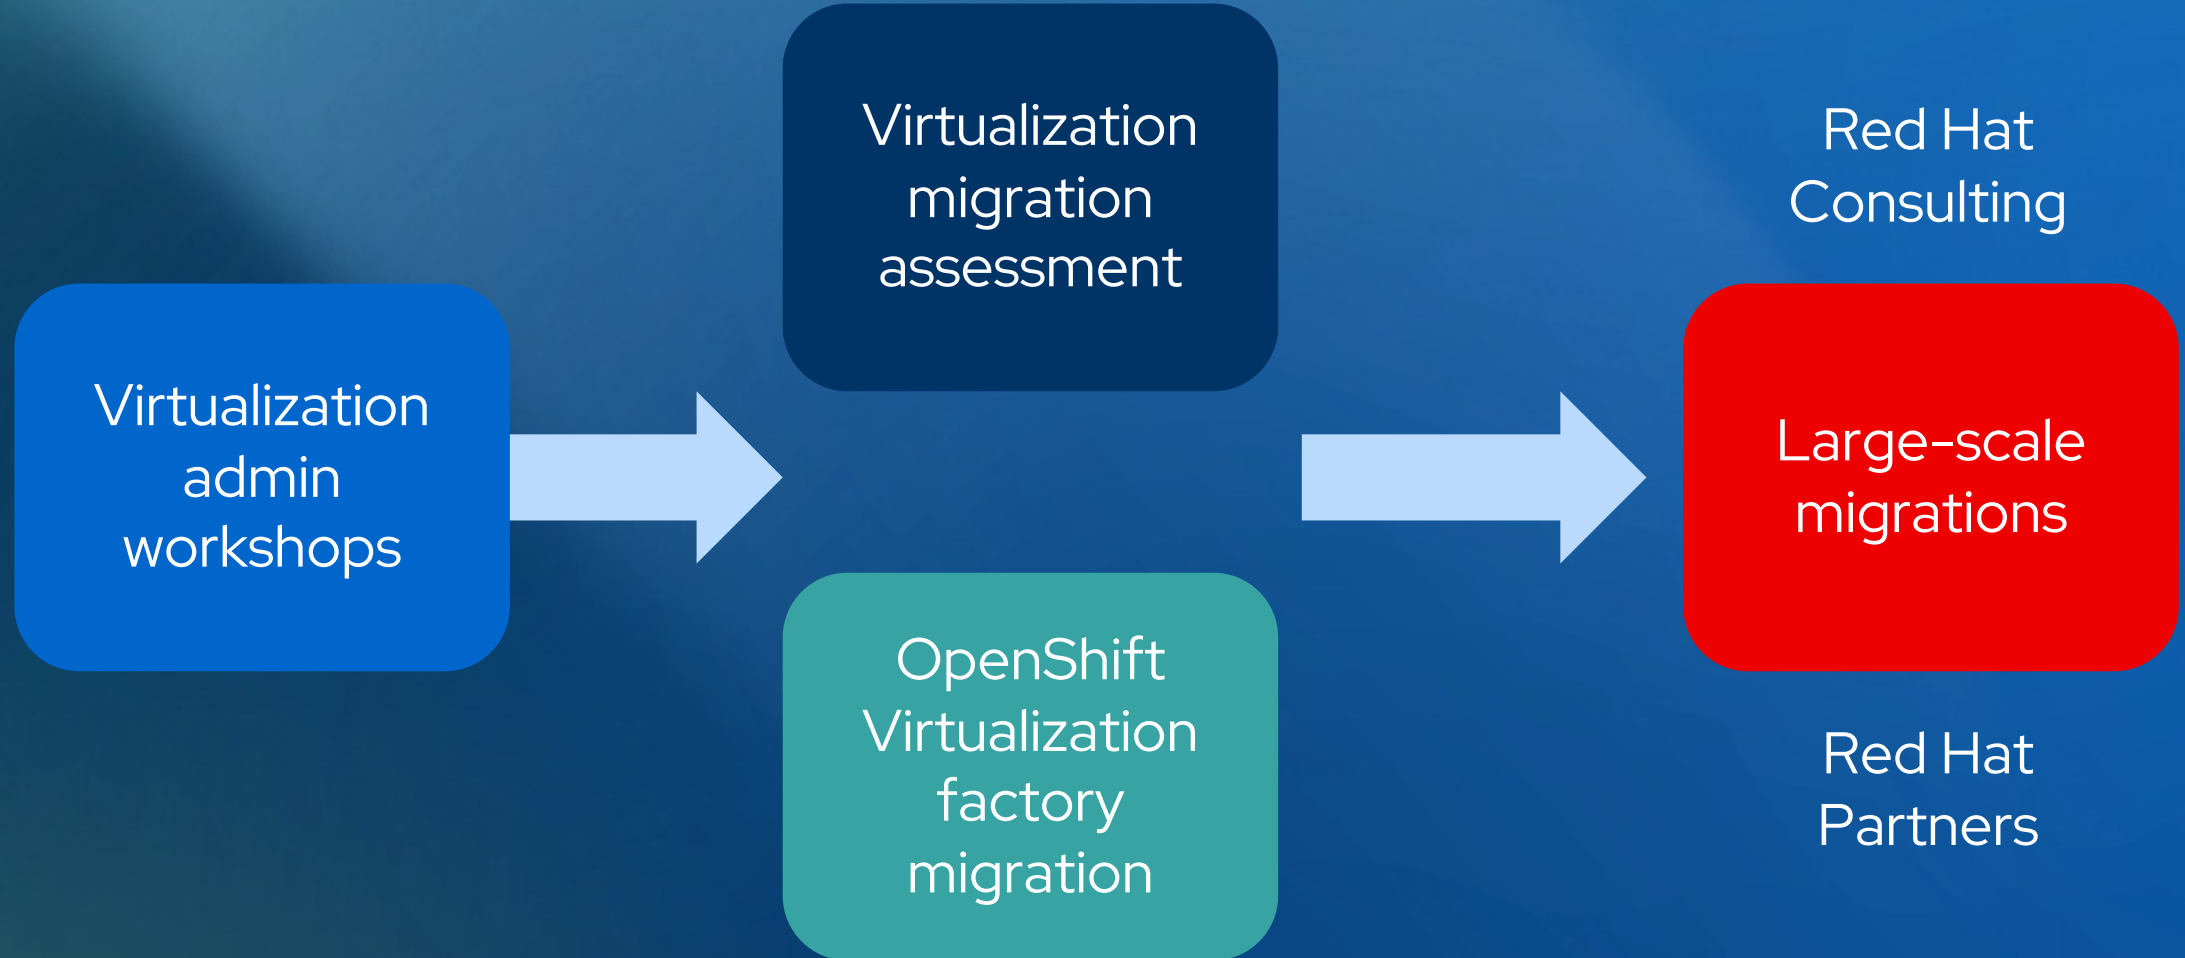

Global Investment Bank

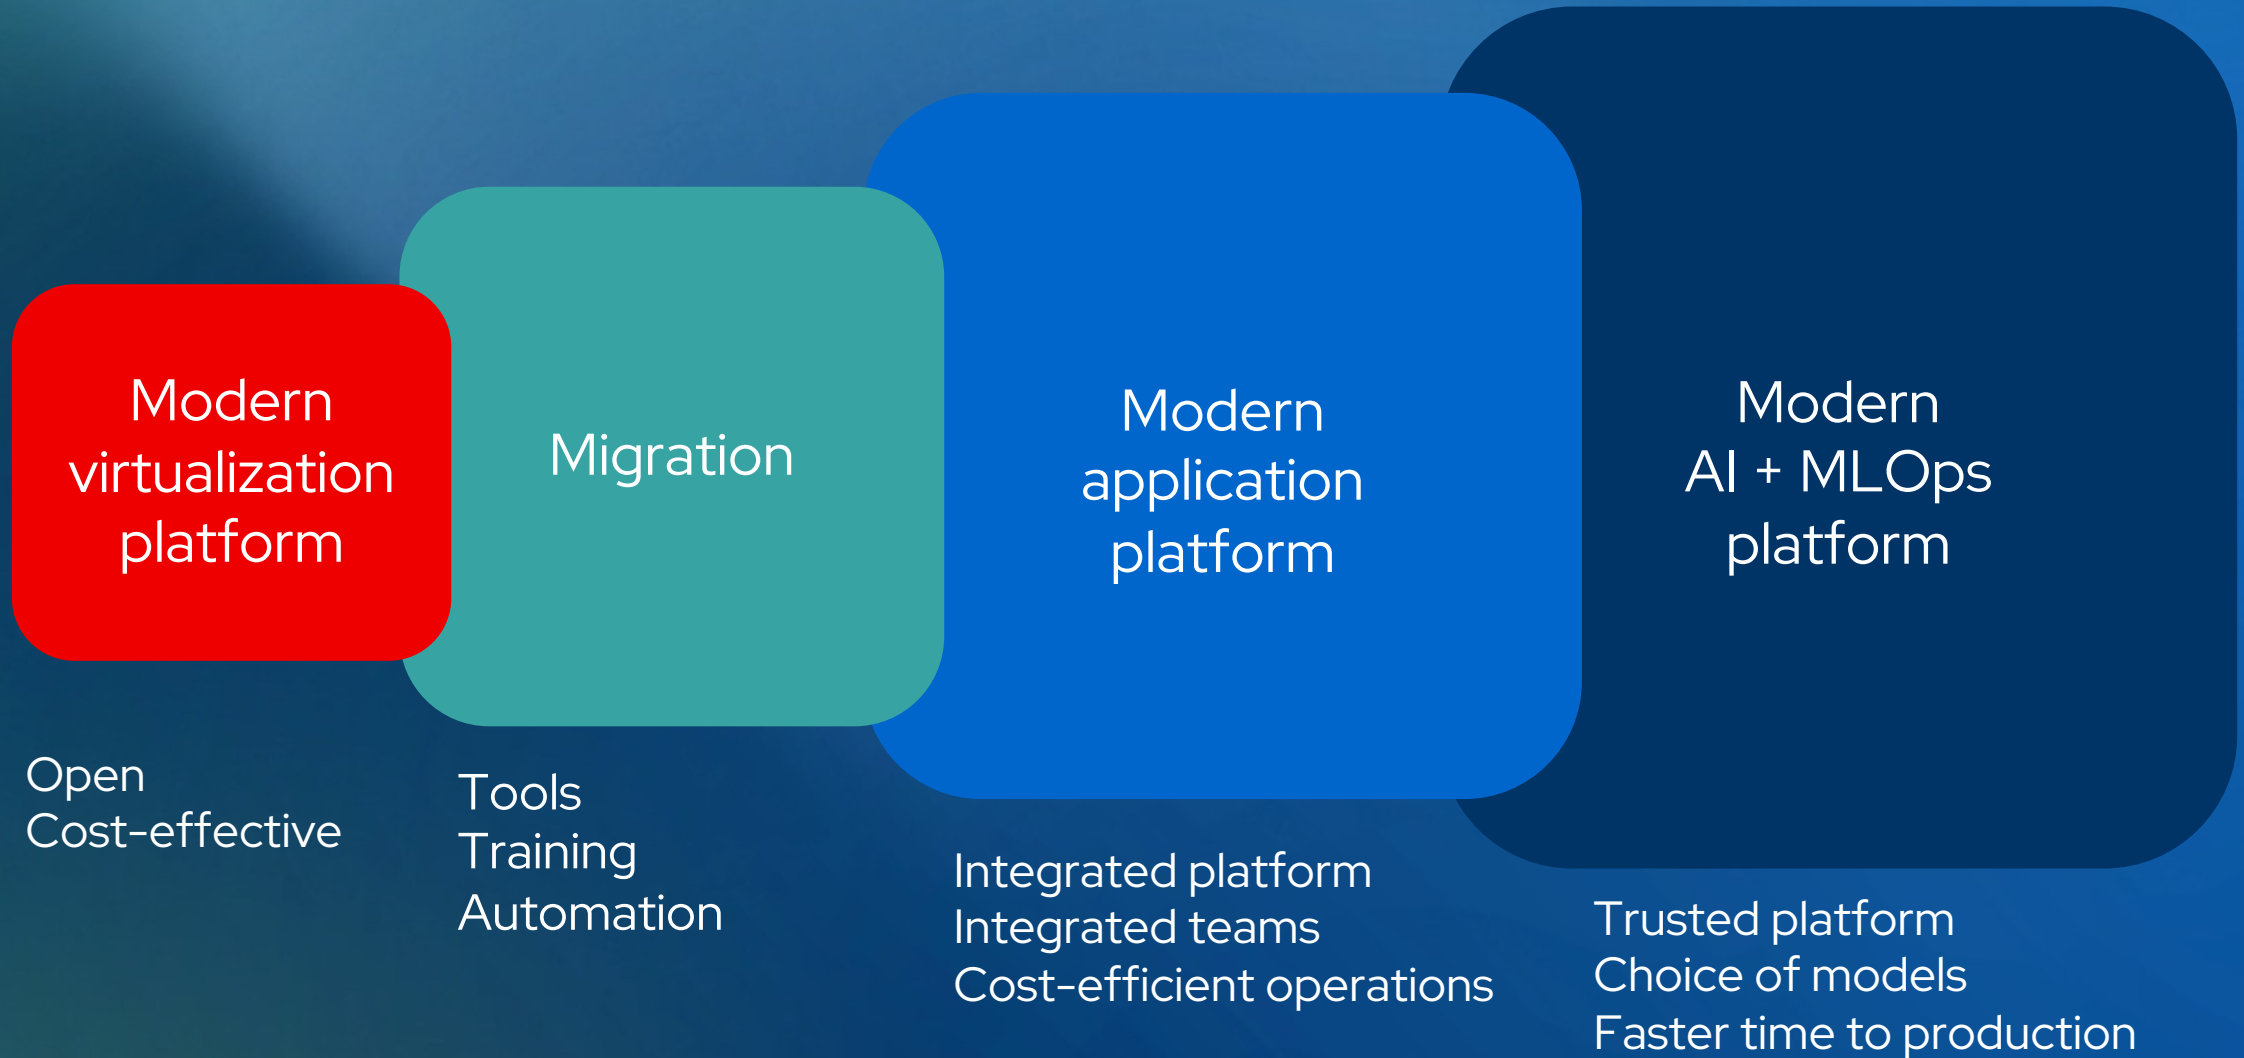

*"...it allowed folks who spent the **last decade or so on existing technologies** to get up to speed with a newer subset of technologies to really help drive to **create a single solution** where we deploy one set of capacity and then burn down that capacity whether it becomes a VM or it becomes a container... a **big thanks to Red Hat team that's stuck with the project**, worked with us day in day out, and really helped enable a solution to help **modernize our underlying compute platform.**"*

—VP Tech Fellow, Global Investment Bank

Enabling virtualization migrations and success

Future-proof your platform, your applications, your teams

The background is a gradient of blue and teal. In the top right, there is a large teal sphere and a smaller red sphere. In the bottom left, there is a large red sphere and a smaller pinkish sphere.
